Use of funds for printing this publication approved by the Director of the Office of Management and Budget June 23, 1971.

AERONAUTICAL ENGINEERING

A Special Bibliography

Supplement 19

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in May 1972 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA)*

Scientific and Technical Information Office

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

JUNE 1972

Washington D C

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22151 for \$3.00. For copies mailed to addresses outside the United States, add \$2.50 per copy for handling and postage.

INTRODUCTION

Under the terms of an interagency agreement with the Federal Aviation Administration this publication has been prepared by the National Aeronautics and Space Administration for the joint use of both agencies and the scientific and technical community concerned with the field of aeronautical engineering

This supplement to *Aeronautical Engineering—A Special Bibliography* (NASA SP-7037) lists 432 reports, journal articles, and other documents originally announced in May 1972 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. For previous bibliographies in this series, see inside of front cover

The coverage includes documents on the engineering and theoretical aspects of design, construction, evaluation, testing, operation, and performance of aircraft (including aircraft engines) and associated components, equipment, and systems. It also includes research and development in aerodynamics, aeronautics, and ground support equipment for aeronautical vehicles

Each entry in the bibliography consists of a standard bibliographic citation accompanied by an abstract. The listing of the entries is arranged in two major sections, *IAA Entries* and *STAR Entries* in that order. The citations and abstracts are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Three indexes—subject, personal author, and contract number—are included. An annual cumulative index will be published.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A72-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc., (AIAA), as follows. Paper copies are available at \$5 00 per document up to a maximum of 20 pages. The charge for each additional page is 25 cents. Microfiche⁽¹⁾ are available at the rate of \$1 00 per microfiche for documents identified by the # symbol following the accession number. A number of publications, because of their special characteristics are available only for reference in the AIAA Technical Information Service Library. Minimum airmail postage to foreign countries is \$1 00. Please refer to the accession number, e.g., A72-10969, when requesting publications.

STAR ENTRIES (N72-10000 Series)

A source from which a publication abstracted in this Section is available to the public is ordinarily given on the last line of the citation, e.g., Avail NTIS. The following are the most commonly indicated sources (full addresses of these organizations are listed at the end of this introduction).

Avail NTIS Sold by the National Technical Information Service at a standard price of \$3 00 for hard copy (printed, facsimile, or reproduced from microcopy) of 300 pages or less. Documents in the 301 to 600 page range are sold for \$6 00 in hard copy, and those in the 601 to 900 page range are sold at \$9 00. Documents exceeding 900 pages are priced by NTIS on an individual basis. These prices apply retroactively to all documents in the NTIS collection, but in addition, documents of 300 pages or less that are over two years old (from date of announcement in *Government Reports Announcements*, or *STAR* for those items announced only in *STAR*) will have a surcharge of \$3 00 added for a total price of \$6 00. No additional surcharge will be added for documents over 300 pages. For copies mailed to addresses outside the United States add \$2 50 each for handling and postage. Microfiche is available from NTIS at a standard price of 95 cents (regardless of age) for those documents identified by the # sign following the accession number (e.g., N72-11045#) and having an NTIS availability shown in the citation. For copies mailed to addresses outside the United States add \$1 50 per document for handling and postage. Standing orders for microfiche of (1) the full collection of NTIS-available documents announced in *STAR* with the # symbol, (2) NASA reports only (identified by an asterisk (*)), (3) NASA-accessioned non-NASA reports only (for those who wish to maintain an integrated microfiche file of aerospace documents by the "N" accession number), or (4) any of these classes within one or more *STAR* categories, also may be placed with NTIS at greatly reduced prices per title (e.g., 35 cents) over individual requests. For subscribers outside the United States, add 15 cents for each title shipped. Inquiries concerning NTIS Selective Categories in Microfiche should be addressed to the Subscription Unit, National Technical Information Service.

Prices for NTIS products and services are subject to change without notice.

Avail SOD (or GPO) Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The price is given following the availability line. (An order received by NTIS for one of these documents will be filled at the SOD price if hard copy is requested. NTIS will also fill microfiche requests at the standard 95 cent price, for those documents identified by a # symbol.)

(1) A microfiche is a transparent sheet of film 105 x 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 24:1 reduction).

- Avail NASA Scientific and Technical Information Office Documents with this availability are usually news releases or informational brochures available without charge in paper copy
- Avail AEC Depository Libraries Organizations in U S cities and abroad that maintain collections of U S Atomic Energy Commission reports usually in microfiche form, are listed in *Nuclear Science Abstracts* Services available from the USAEC and its depositories are described in a booklet, *Science Information Available from the Atomic Energy Commission* (TID-4550) which may be obtained without charge from the USAEC Division of Technical Information
- Avail Univ Microfilms Documents so indicated are dissertations selected from *Dissertation Abstracts*, and are sold by University Microfilms as xerographic copy (HC) at \$10 00 each and microfilm at \$4 00 each regardless of the length of the manuscript Handling and shipping charges are additional All requests should cite the author and the Order Number as they appear in the citation
- Avail HMSO Publications of Her Majesty's Stationery Office are sold in the U S by Pendragon House Inc (PHI) Redwood City California The U S price (including a service charge) is given, or a conversion table may be obtained from PHI
- Avail National Lending Library Boston Spa England Sold by this organization at the price shown (If none is given an inquiry should be addressed to NLL)
- Avail ZLDI Sold by the Zentralstelle für Luftfahrtokumentation und -Information Munich Federal Republic of Germany at the price shown in deutschmarks (DM)
- Avail Issuing Activity or Corporate Author or no indication of availability Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document
- Avail U S Patent Office Sold by Commissioner of Patents U S Patent Office at the standard price of \$ 50 each postage free
- Other availabilities If the publication is available from a source other than the above the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line

GENERAL AVAILABILITY

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR Entries* and *IAA Entries* sections It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies especially NASA A listing of public collections of NASA documents is included on the inside back cover

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS) The annual subscription rate for the monthly supplements excluding the annual cumulative index is \$18 00 All questions relating to subscriptions should be referred to the NTIS

TYPICAL CITATION AND ABSTRACT FROM STAR

TYPICAL CITATION AND ABSTRACT FROM IAA

AERONAUTICAL ENGINEERING

A Special Bibliography (Suppl. 19)

JUNE 1972

IAA ENTRIES

A72-22208 # Motion of a system on a given surface in a phase space (*Dvizhenie sistemy po zadannoi v fazovom prostranstve poverkhnosti*) A M Formal'skii (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) *Moskovskii Universitet, Vestnik, Seriya I - Matematika, Mekhanika*, vol 27, Jan Feb 1972, p 102-107 6 refs In Russian

Study of the problem of control synthesis for a system that is to move on a given surface in a phase space. The investigation is of a mainly methodological character. As an example of such a problem, the case on an aircraft is considered whose motion in the phase space is not to transgress given limits. M V E

A72-22298 # Designing an airfoil contour as the envelope of a family of circles (*Postroenie kontura profilja kak ogibaushchei semeistva okruzhnostei*) A V Kan *Energomashinostroenie*, vol 17, Dec 1971, p 10-12 In Russian

A method of determining the coordinates of an arbitrary number of points on an airfoil contour is proposed which requires a minimum of initial data on the airfoil geometry. The method is based on the idea of representing the airfoil contour as the envelope of a family of circles whose centers lie on the mean camber line. The theory of the method is outlined, and the method is applied to the solution of some airfoil geometry problems. V P

A72-22320 # Investigation of the effect produced by shaft and wall in aerodynamic measurements with three-orifice probes in wind tunnels (*Untersuchung des Schaft- und Wandinflusses bei aerodynamischen Messungen mit Dreilochsonden in Stromungskanälen*) H Heikal Berlin, Technische Universität, Institut für Luftfahrttriebwerke, Dr Ing Dissertation, 1971 120 p 75 refs In German

A number of phenomena were observed during measurements conducted with the aid of pressure probes. These phenomena include a diffusor effect near the aperture used for introducing the probe, a nozzle effect at the opposite wall, a blocking action due to the displacement effect of the probe, the continuous change of the flow field at the introduction of the probe, the interaction of the probe with the wall, and the effect of the velocity gradient. These phenomena cause significant deviations in the measured data from the actual values. A new three-orifice probe can be used for measurements in small channels and in flow fields with velocity

gradients. A new approach was developed in the investigation. This approach makes it possible to determine the actual values for the flow parameters by taking into account interaction effects. G R

A72-22396 Ceramic fibres for the reinforcement of gas turbine blades J E Bailey and H A Barker (Surrey, University, Guildford, Surrey, England) In *Ceramics in severe environments*, Proceedings of the Sixth University Conference on Ceramic Science, North Carolina State University, Raleigh, N C, December 7-9, 1970

New York: Plenum Press, 1971 p 341-358, Discussion, p 358, 359 31 refs. Research supported by the Department of Trade and Industry

Continuous filament reinforcement of nickel base alloy turbine blades with SiC, W, or Al₂O₃ has been considered as a means of improving creep resistance at high temperatures (up to 1200°C). SiC is readily available in fibre form, but reacts chemically with the matrix, tungsten wires are excessively dense, and alumina fibres have not been available until recently. Extrusion or pulling of molten alumina was tried but abandoned at an early stage. Extrusion and sintering of a very concentrated aqueous dispersion of hydrated alumina has been moderately successful. Fabrication of composite blades using polycrystalline alumina (or continuous sapphire single crystal) fibres has not proved successful by liquid infiltration since severe damage is caused to the fibres. (Author)

A72-22407 # A study of the boundary layer transition on a wing profile at supersonic speeds (*Issledovanie perekhoda pogranichnogo sloja na krylovom profile pri sverkhzvukovykh skorostyakh*) V I Kornilov, V Ia Levchenko, and A M Kharitonov (Akademiya Nauk SSSR, Institut Teoreticheskoi i Prikladnoi Mekhaniki, Novosibirsk, USSR) *Akademiya Nauk SSSR, Sibirskoe Otdelenie, Izvestiya, Seriya Tekhnicheskikh Nauk*, no 1, 1971, p 15-20 6 refs In Russian

Study of the transition from a laminar to a turbulent boundary layer on a parabolic wing profile in a supersonic wind tunnel. It is found that the critical Reynolds number increases greatly with an increase in the thickness of the leading edge. This increase in the Reynolds number is qualitatively attributed to the formation of a favorable static pressure gradient on the wing surface, which causes a considerable decrease in the Reynolds number at the edge of the boundary layer and, consequently, promotes stabilization of the laminar layer. The fact that the unit Reynolds number affects the boundary layer transition on the wing profile is confirmed. It is shown that with an increase in the unit Reynolds number the transition region is widened. A B K

A72-22435 # Optimal choice of parameters for the measurement of small scale atmospheric turbulence with an airborne hot-wire anemometer C M Sheih (Pennsylvania State University) University

Park, Pa.) *Journal of Applied Meteorology*, vol 11, Feb 1972, p 81-84 7 refs US Environmental Protection Agency Grant No AP01082, NSF Grant No GA-18109

The paper presents typical spectra of probe motions, turbulence, and electronic noise of an airborne hot-wire anemometer. Their relative amplitudes as a function of aircraft size and velocity, hot wire length, and turbulence dissipation are discussed. The optimal choice of these parameters in the measurement of small scale atmospheric turbulence with an airborne hot wire anemometer is recommended (Author)

A72 22438 # Temperature gradients in stratospheric turbulence D E Waco (Lockheed California Co., Burbank, Calif) *Journal of Applied Meteorology*, vol 11, Feb 1972, p 99-107 25 refs

Use of data obtained from U2 HICAT flights to relate the magnitudes of horizontal temperature changes to flight conditions. The empirical findings can be used in estimating the effectiveness of aircraft borne sensors which rely on temperature measurements for the remote detection of clear air turbulence. Gust velocity changes of at least 20 ft/sec occurred in all but one of 68 turbulence encounters in which temperature changes were 3 C or higher, and in only 13 of 97 cases with changes of less than 1C. Although short-period temperature variations were generally small during smooth flight and increased in magnitude during rougher flight, exceptions were noted. Large horizontal temperature changes were observed during smooth flight in the vicinity of severe turbulence and during occasional flights where the temperature changed appreciably over shallow vertical layers. Small changes were sometimes noted during moderate turbulence when the vertical temperature structure was nearly isothermal (Author)

A72-22451 # Successful test of an airborne gas chromatograph H F Hawkins, B M Lewis (NOAA, National Hurricane Research Laboratory, Coral Gables, Fla.), K R Kurfis (US Environmental Protection Agency, Div of Meteorology, Raleigh, NC), and H G Ostlund (Miami University, Miami, Fla.) *Journal of Applied Meteorology*, vol 11, Feb 1972, p 221-226 6 refs

Use of a portable gas chromatograph designed for real time studies in diffusion and successfully tested in an airborne application. A 10-mile low-level plume of colorless, odorless nontoxic sulfur hexafluoride (SF6) was laid down over northwest Andros Island, Commonwealth of Bahama Islands by a C130. An accompanying DC-6 carrying the analyzer made 81 in flight samples over a period of less than 3 hr. The chromatograph has a sensitivity limit of 0.03 parts per billion and completes the analysis for SF6 less than 2 min after the sample is injected into the column. Of the more than 80 in-flight chromatograms, 11 indicated positive identification of the inert tracer gas. Confirmation of the on-site analyses was provided by bottle samples taken in flight and analyzed later in the laboratory (Author)

A72-22473 Technology forecasting and risk assessment in V/STOL transport area J J Foody (Boeing Co., Military Aircraft Systems Div., Seattle, Wash.) *Technological Forecasting and Social Change*, vol 3, no 1, 1971, p 89-98

Discussion of some of the procedures and issues involved in the forecasting and risk assessment of V/STOL aircraft technology and evaluation of its prospects. Following a brief survey of previous history, mission issues are examined, particularly the performance characteristics emphasized by specific missions, and then the stage of development, selection criteria, and various technology implementation steps are reviewed. It is pointed out that, whereas many helicopters have reached operational status, with the single exception of the Harrier (P-1127), no direct lift turbojet or turbofan has, nor has a tilt rotor type vehicle. Yet, a large number of experimental

vehicles of these types were built and have been considered eminently successful by their builders. Ample proof was provided of available technology for powered-lift operation, but operational status could not be reached because there was no operational requirement that might have warranted the large initial investment. It is concluded that not before there are urgent missions justifying the high initial costs will V/STOL aircraft reach operational status.

M V E

A72-22476 Large aluminum alloy forgings fly high in the DC 10 R V Turley and R H Gassner (Douglas Aircraft Co., Long Beach, Calif.) *Metal Progress*, vol 101, Mar 1972, p 48-50

To achieve optimum design efficiency, several large forgings of 7075-T73 are integral parts of the DC 10, a third generation jet transport. It is described how proper, careful machining and heat treating assure strong, distortion free components. Structural testing of these components is briefly outlined. O H

A72-22477 The B-1 materials-processing systems R D Reidelberger and W A Reinsch (North American Rockwell Corp., Los Angeles, Calif.) *Metal Progress*, vol 101, Mar 1972, p 52-54, 56, 57

The titanium-aluminum-steel composites fiberglass-polyquartz materials system, employed in the advanced B1 heavy, intercontinental range bomber, is described. Principal characteristics and results of cost-weight trade studies which played a key role in material selection, are presented. The fracture mechanics criteria, to which the structures were designed, are outlined. O H

A72 22478 A versatile high-temperature alloy R B Herchenroeder, S J Matthews, J W Tackett, and S T Wlodok (Cabot Corp., Stellite Div., Kokomo, Ind.) *Metal Progress*, vol 101, Mar 1972, p 60, 61, 64

The cobalt-base Haynes alloy No 188, which was developed through the application of advanced metallurgical and solid-state principles, features a combination of high strength, formability, weld durability, and oxidation resistance. It is available in a number of forms, including plated, strip, bars, wire, and tubing. It is well suited for many nuclear, chemical process, and aerospace applications, particularly in the reentry vehicle program. O H

A72-22548 # Microplasma welding of Kh18N10T steel casings (Mikroplazmennaya svarka obechaek iz stali Kh18N10T) M A Abzalov, B V Umarov, E A Sotnikov, and N N Cherkasov (Tashkentskii Politehnicheskii Institut, Tashkent, Uzbek SSR) *Akademiia Nauk Uzbekskoi SSR, Izvestiia, Seriya Tekhnicheskikh Nauk*, vol 15, no 5, 1971, p 26-28. In Russian

Description of a technique which uses a thin argon-hydrogen plasma pencil (needle) for welding thin steel sheets with narrow seams to meet rigorous specifications in the production of casings for aircraft engines and precision equipment. The seams obtained by this technique on thin steel welds were finer than those obtained by conventional argon arc welding. V Z

A72-22626 Peculiarities in the control characteristic of two-stage propulsion systems with and without mixing operation (Besonderheiten in der Regelcharakteristik von Zweikreistriebwerken mit und ohne Mischung) F Fett (Fried Krupp GmbH, Essen, West Germany) *Zeitschrift für Flugwissenschaften*, vol 20, Jan Feb 1972, p 1-8. In German

Mixed and unmixed type turbofans, having identical rotating components and thermodynamic cycles, are compared in terms of

transient characteristics and steady-state off-design operation. Effects of step changes in fuel flow rate, nozzle area, inlet pressure, ambient temperature and air bleed are illustrated on both the fan and compressor operating maps. Results show significant differences in the dynamic behavior of the mixed and unmixed turbofan engines without the influence of an engine control. Off design steady state operating points are also different. Both effects are more pronounced in the low pressure fan than in the high pressure compressor. Such characteristics are important in the design of a compatible engine control unit. (Author)

A72-22632 Partial load computation for axial flow compressor stages (Teilastberechnung für Axialverdichterstufen) K. Grah (Cincinnati, University, Cincinnati, Ohio) *Zeitschrift für Flugwissenschaften*, vol 20, Jan Feb 1972, p 42-51. 19 refs. In German.

An application of an existing computer program is described for studying the off-design performance for axial flow compressors. The presented analytical method allows to find the stage characteristics as a function of revolutions. This can be accomplished in very short time with only few geometrical and aerodynamical input data. The flow is described by the well known streamline curvature method. It is, therefore, necessary to present an exact loss model, limitations of this method are described. Some computation examples for the first and fifth stages of a ten stage subsonic axial flow compressor are presented. The off-design analytical results are compared with existing experimental results. (Author)

A72-22634 Methods for decreasing the secondary losses in axial-flow turbine stages (Methoden zur Verminderung der Sekundärverluste in axialen Turbinenstufen) H. Prumper (Rheinisch-Westfälische Technische Hochschule, Aachen, West Germany) *Zeitschrift für Flugwissenschaften*, vol 20, Jan Feb 1972, p 60-70. In German.

The major secondary flows occurring in turbine stages are presented and their causes and their effect on the total flow are discussed. Through visualization of the flow lines near the wall and accurate measurement of the three dimensional loss distribution of cascades featuring short and longer blades, detailed information may be obtained on the mechanism of the secondary flows and the secondary losses thereby produced. In the course of experimental tests aimed at possibilities of suppressing secondary flows and secondary losses incidental thereto, the method of using boundary layer fences on the profile suction sides of the blades proved to be particularly effective and economical. Finally, the experimental results obtained from the application of this method in a turbine stage are presented. (Author)

A72-22646 A scientist in the cockpit - The case history and analysis of a UFO sighting. H. Wichman (California State College, San Bernardino, Calif.) *Space Life Sciences*, vol 3, Dec 1971, p 165-170. 7 refs.

A UFO sighting took place during a night instrument training flight on which the author served as flight instructor. The UFO was in the form of a bright light approaching on a collision course at a very high rate of speed - a rapid deceleration and hovering - a rapid acceleration away from the author's plane followed by another deceleration and hovering. This apparent reconnoitering activity was repeated approximately ten times after which the object failed to reappear. The paper describes the struggle the author went through, after the first stages of alarm subsided, in an attempt to explain by means of scientific principles what was being seen. A satisfactory tentative explanation was discovered and the method by which this came about is discussed as is the manner in which the explanation was tested in the cockpit. (Author)

A72-22691 Non-contacting measurements using mini-radars. F. W. Coultas (Royal Radar Establishment, Malvern, Worcs., England) *Chartered Mechanical Engineer*, vol 19, Mar 1972, p 62-66. 7 refs.

The compactness and reliability of the new radars is due mainly to a semiconductor microwave-generator. The new solid state devices will generate microwave power quite cheaply at low voltages and at a level of a few milliwatts. A miniature CW Doppler radar was developed. The system detects the presence of a moving object and can give a direct reading of its speed. One important direct application is the measurement of true speed over ground. Relative measurements of distances to an accuracy of plus or minus 4 mm can be achieved. Other applications are the determination of the rate of rotation. G. R.

A72-22776 Deutsche Gesellschaft für Ortung und Navigation, National Convention About Man and Technology in Orientation and Navigation, Essen, West Germany, October 26, 27, 1971, Communications (Deutsche Gesellschaft für Ortung und Navigation, Nationale Tagung über Mensch und Technik in Ortung und Navigation, Essen, West Germany, October 26, 27, 1971, Mitteilungen) *Ortung und Navigation*, no 4, 1971. 342 p. In German.

The respective parts played by man and technology in the solution of orientation and navigation problems are discussed, together with aspects of aircraft control automation and the possible application of experience obtained in space flight to problems of air and maritime navigation. Other subjects discussed are related to the adaptation of navigation devices to human beings, criteria needed for computer analysis of operational and psychophysiological parameters, and the psychophysics of the recognition of a collision hazard. G. R.

A72-22778 Analysis of information processing for the ground-based supervision and guidance of flight motions (Analyse der Informationsverarbeitung bei der bodenseitigen Überwachung und Lenkung der Flugbewegungen) D. Reiche (Darmstadt, Technische Hochschule, Darmstadt, West Germany) (Deutsche Gesellschaft für Ortung und Navigation, Nationale Tagung über Mensch und Technik in Ortung und Navigation, Essen, West Germany, Oct. 26, 27, 1971) *Ortung und Navigation*, no 4, 1971. 30 p. 20 refs. In German.

Aspects of air traffic control are described from the point of view of system analysis. Attention is given to questions regarding the evaluation of the work load to which the controllers are subjected. The importance of an approach using algorithms for a description of information processing problems is pointed out. The approach considered makes use of a transformation of flow diagrams into a one-dimensional description pattern. The terminology proposed by Liapunov (1962) has great advantages in connection with the employment of electronic computers. G. R.

A72-22779 Anthropotechnical aspects of taxiing /pilot/ and taxi-guidance /flight manager/ of aircraft in the landing area (Anthropotechnische Aspekte der Rollführung /Pilot/ und der Bewegungslenkung /Flugleiter/ von Flugzeugen auf dem Rollfeld) C. Woltje (Hannover, Technische Universität, Hannover, West Germany) (Deutsche Gesellschaft für Ortung und Navigation, Nationale Tagung über Mensch und Technik in Ortung und Navigation, Essen, West Germany, Oct. 26, 27, 1971) *Ortung und Navigation*, no 4, 1971. 54 p. 26 refs. In German.

The motions of aircraft in the landing area are subject to air traffic regulations. The flight manager assigns to the pilot a runway and an approach to the apron. Aircraft motions are controlled from the control tower on the basis of visual observations. It is pointed out that the present approach for the guidance of aircraft on the

ground will not be satisfactory any more in the future because of orientation and observation problems occurring in connection with increasing air traffic. A computer-based operational system of great reliability will be required. Various factors involved in the motions of aircraft on the ground are discussed, giving particular attention to operational aspects. G R

A72-22780 Automation in aeronautics from the point of view of the pilot (Automation in der Luftfahrt aus der Sicht des Flugzeugführers) R D Andres (Deutsche Lufthansa AG, Frankfurt am Main, West Germany) (*Deutsche Gesellschaft für Ortung und Navigation, Nationale Tagung über Mensch und Technik in Ortung und Navigation, Essen, West Germany, Oct. 26, 27, 1971*) *Ortung und Navigation*, no 4, 1971 12 p. In German

Scope and effects of automation concerning the planning and the execution of flights are considered, giving attention also to the reasons for an introduction of automation and its limitations. It is shown that these limitations are continuously being reduced in favor of automation because of new advances in technology. A highly automatic system will be the end result of this development. G R

A72-22781 Division of labor between man and machine in aircraft-based flight control - Development, status, and technology (Die Arbeitsteilung Mensch - Maschine in der bordseitigen Flugführung - Entwicklung, Stand und Technik) R K Bernotat (Forschungsinstitut für Anthropotechnik, Meckenheim, West Germany) (*Deutsche Gesellschaft für Ortung und Navigation, Nationale Tagung über Mensch und Technik in Ortung und Navigation, Essen, West Germany, Oct. 26, 27, 1971*) *Ortung und Navigation*, no 4, 1971 11 p 7 refs. In German

The operations which can be performed by man in aircraft based flight control are briefly examined, and trends towards automatic control are discussed. Criteria for optimal division of operations into those which should be performed by the pilot and those which are better undertaken by the machine are related to a high technical performance of the entire system, economic factors, and questions of job satisfaction for the pilot. Stages in the development of a fully automatic system are considered. G R

A72-22782 Real time-simulation technology in air traffic control (Echtzeit-Simulationstechnik in der Flugsicherung) O Warns (EUROCONTROL Versuchszentrum, Bretigny, Eure-et-Loir, France) (*Deutsche Gesellschaft für Ortung und Navigation, Nationale Tagung über Mensch und Technik in Ortung und Navigation, Essen, West Germany, Oct. 26, 27, 1971*) *Ortung und Navigation*, no 4, 1971 15 p. In German

Traffic control in the airspace depends almost exclusively on the cooperation of the pilot with flight controllers in ground based ATC centers. The growth of air traffic, the introduction of new aircraft types, and new aids for navigation and supervision are responsible for continuous changes in the requirements for ATC systems. It is now possible to simulate with the aid of computers the environmental conditions which are significant for the control of air traffic. ATC systems can be investigated in a case study. G R

A72-22783 Displays and automation in flight control (Displays und Automation in der Flugführung) R Beyer (Deutsche Forschungs und Versuchsanstalt für Luft und Raumfahrt, Institut für Flugführung, Braunschweig, West Germany) (*Deutsche Gesellschaft für Ortung und Navigation, Nationale Tagung über Mensch und Technik in Ortung und Navigation, Essen, West Germany, Oct. 26, 27, 1971*) *Ortung und Navigation*, no 4, 1971 14 p. In German

The growing complexity of flight control problems makes flight control on a purely manual basis increasingly difficult. The possibil-

ities to obtain optimal solutions by complete automation, on the other hand, are limited. Number and type of displays on board of an aircraft depend on the degree of automation available. Factors to be considered in decisions between manual and automatic flight control are related to the type of the flight problem, the technology available, and the degree of attention which the pilot can devote to the problem. G R

A72-22784 Flight control systems for VSTOL aircraft from an anthropotechnical point of view (Flugführungssysteme für VSTOL-Flugzeuge aus anthropotechnischer Sicht) K Brammer and G Schweizer (Dornier AG, Friedrichshafen, West Germany) (*Deutsche Gesellschaft für Ortung und Navigation, Nationale Tagung über Mensch und Technik in Ortung und Navigation, Essen, West Germany, Oct. 26, 27, 1971*) *Ortung und Navigation*, no 4, 1971 24 p. In German

Systems for the control of VSTOL and conventional aircraft are compared, taking into account the significant landing characteristics in both cases. The limits of human capability have to be considered in the design of the equipment for the control of a VTOL. Various approaches for the control of a VTOL are discussed. A control algorithm is described, and questions regarding the most suitable instrumentation of the aircraft are explored. G R

A72-22812 # Velocity distribution at a supersonic compressor inlet (Répartition des vitesses à l'entrée d'un compresseur supersonique) B Ledoux and R Bagot (ONERA, Châtillon sous Bagneux, Hauts de Seine, France) (*NATO, AGARD, Meeting on Inlets and Exhausts for Aerospace Engines, Sandefjord, Norway, Sept. 13-17, 1971*) *ONERA, TP* no 975, 1971 11 p. In French. Research supported by the Direction des Recherches et Moyens d'Essais

Development of two methods of determining radial velocities and their influence on the axial velocity profile. In the first, or direct, method compressible flow is established from the duct and the cowl shapes, the computed pressure distributions are compared with those read on the external shroud and on the cowl during wind tunnel tests, from these, the velocity distribution in the duct is deduced. In the second, or indirect, method, starting from the pressure distribution on the external wall and leading to the flow field, the calculation is checked by comparing the streamline corresponding to that of the inlet setup and the shape of the front cowl meridian line. The two methods give coherent results. F R L

A72-22813 # Theoretical and experimental study of the coexistence of two flows in a constant section duct (Etude théorique et expérimentale de la co-existence de deux flux dans un canal de section constante) J Paulon (ONERA, Châtillon sous Bagneux, Hauts de Seine, France) (*NATO, AGARD, Meeting on Inlets and Exhausts for Aerospace Engines, Sandefjord, Norway, Sept. 13-17, 1971*) *ONERA, TP* no 976, 1971 13 p 8 refs. In French

Study of the coexistence in a constant section duct of a supersonic jet within a subsonic jet, using two dimensional and asymmetrical setups of very similar characteristics. The experimental analysis of the flow, made from the pressure readings on the walls and inside the fluid, led to characterizing the actual limits of the two flows, and also the transition domain between them. In the two dimensional case, the schlieren visualization of the flow confirms the measurements. The theoretical analysis, based on the method of characteristics, confirms the parietal readings. The maximum flaring section given by this method differs from the sonic section of the external flow, and this may lead to faulty predictions in the case of a contoured ejector. F R L

A72-22815 # Study and calibration of pressure sensors in particular environments (Etude et étalonnage de capteurs de pressions en ambiances particulières) B Baerd, A Julienne, and R Nantois (ONERA, Chatillon sous Bagneux, Hauts-de-Seine, France) (*International Congress on Acoustics, 7th, Budapest, Hungary, Aug 18-26, 1971*) ONERA, TP no 982, 1971 6 p 6 refs In French

Study of various types of sensors for unsteady pressures in order to make measurements in the interiors of turbine engines, inside jets, and on exhaust nozzles. The sensors are of the capacitive type with electret effect. They are required to work properly in difficult conditions such as high noise level, surrounding flow, static over pressure, vibration, and high temperature. The SNR is good, and the response curve is very extensive. F R L

A72-22816 # Studies of coherent and incoherent structures of noise of aerodynamic origin (Etudes des structures cohérentes et incohérentes de bruit d'origine aérodynamique) J F de Belleval, P Harel, J Lambourion, and M Perulli (ONERA, Chatillon sous Bagneux, Hauts-de-Seine, France) (*International Congress on Acoustics, 7th, Budapest, Hungary, Aug 18-26, 1971*) ONERA, TP no 983, 1971 6 p 10 refs In French

Study of coherent and incoherent structures, starting with currently used theoretical models, in an attempt to define the influence of inhomogeneities of flow and of absorbed structures at the wall. With the help of space time correlations, the pressure near the field of a compressor and the infrared emission of a hot jet are analyzed in order to deduce the structure of the sources. F R L

A72-22822 # Collision avoidance systems R M G Maule *Tech Air*, vol 28, Mar 1972, p 2, 3

Investigations have been conducted to find a method for reducing the risk of midair collisions. There are five criteria which any collision avoidance system should meet. A collision threat evaluation is considered together with current collision avoidance systems, and collision avoidance maneuvers. It is pointed out that EROS is now a working system. It is already in service and has been selected by one airline in the US. SECANT has been shown to be a workable system but is still at a development stage. G R

A72-22824 # Some aspects of hovercraft aerodynamics R G Wade (Ministry of Transport, Ottawa, Canada) (*Canadian Aeronautics and Space Institute, Annual General Meeting, Montreal, Canada, May 6, 1971*) *Canadian Aeronautics and Space Journal*, vol 18, Feb 1972, p 39-42

Discussion of the interdependent external and internal aerodynamic forces which act on a hovercraft in motion and contribute to its control characteristics and suspension capability. The problems of operating at high angles of aerodynamic yaw and the consequent directional and roll stability of a hovercraft are examined in an analysis of external forces, taking into account the significance of yawing moment contributions. Factors affecting the internal flow are also considered, with special reference to those aspects which affect vehicle performance over random surfaces. V Z

A72-22860 # General rectilinear motion of a thin airfoil (Obecný přímočarý pohyb tenkého profilu) Z Škoda *Zpravodaj VZLU*, no 5, 1971, p 7-11 5 refs In Czech

A precise solution of a general, unsteady, rectilinear motion of a thin airfoil in an ideal, incompressible gas is presented. Formulas have been derived for the calculation of the lift and pitching moment for a given vertical component of surface velocity on a thin profile. An application of these formulas to the calculation of the lift of a rotor blade shows that the lift increment on the retreating blade can be as much as 16 per cent compared with the steady case. O H

A72-22861 # Force relations and effects of higher-order forces in shock absorbing systems of airplanes and vehicles (Sílové vztahy a účinky vyšších řádů v tlumeně pružnicích systémech letadel a vozidel) J Šprinc *Zpravodaj VZLU*, no 5, 1971, p 13-25 9 refs In Czech

A model method or analysis has been used for studying the processes that occur in systems consisting of several masses interconnected by elastic and damping members. Force equations are derived from which the resulting system rigidity and damping can be determined, and the resonance frequencies of the transfer of the load generated by the contact with the ground can be calculated. An explanation is given of the significance of higher order forces which gives a partially new view of the problem of aircraft landing gears. O H

A72-22862 # The control of a two shaft gas turbine used for helicopter propelling (Řízení dvouhřídelové spalovací turbíny při pohonu vrtulníku) J Salaba *Zpravodaj VZLU*, no 5, 1971, p 27-41 7 refs In Czech

To improve the economy of helicopter operation, possible methods of controlling a two shaft gas turbine engine in a helicopter are analyzed. Two methods of major importance are described in more detail. For both, analyses of transient processes are given, and control block diagrams are developed. An approach based on the application of a cybernetic equipment for turbine control is also proposed. O H

A72-22897 Analysis of radar signals from aircraft by using radiorod data K von Schlachta (Gesellschaft zur Förderung der astrophysikalischen Forschung, Forschungsinstitut für Funk und Mathematik, Werthhoven, West Germany) *Nachrichtentechnische Zeitschrift*, vol 25, Feb 1972, p 76-78 9 refs. Research supported by the European Organization for the Safety of Air Navigation

A statistical evaluation of radar data, measured with two different L-band magnetron radars, has shown that the few values received during scanning of aircraft with a rotating antenna give an astonishingly exact information on the radial velocity of the target. The probability density of the scanwise calculated deviation of target amplitude and Doppler shift is given for different kinds of aircraft. It is shown that the use of the mean Doppler shift allows a more exact calculation of the radial velocity of aircraft than the usual evaluation of coordinates. O H

A72-22900 Concorde vision W E Goff *Flight International*, vol 101, Mar 2, 1972, p 321, 322

Discussion of the glass (Triplex Ten Twenty) used in the Concorde windscreen panels. Glazing of the visor consists of six panels of glass/vinyl sandwich construction with a gold-film heating element. The glazing is resistant to hail and rain, has freedom from ice and mist, provides good vision when looked through obliquely, has strength and stiffness under aerodynamic loading at speeds up to Mach 2, can withstand temperatures ranging from 54 to 112 C, and suppresses solar heating. Ten Twenty glass gives a considerable reduction in weight. F R L

A72-22901 Aircraft maintenance and reliability M Fukushima (Japan Air Lines Co, Ltd, Tokyo, Japan) *Microelectronics and Reliability*, vol 11, Feb 1972, p 41-46

Explanation of the means by which aircraft operational reliability is monitored and controlled on scheduled airlines. Aircraft reliability indexes discussed are the mechanical delay rate (dispatch reliability), log entries per 1000 flight hr, and significant failure rate. A component reliability monitoring program is outlined, the key factors of which are the component failure rate, failure mode

analysis, sampling inspection as necessary, and application of remedial action to significant failed portions and other related environments F R L

A72-22906 # Fuel tight fastening by automatic machine T H Speller and J A Randolph (General Electro Mechanical Corp., Buffalo, N Y) *Aircraft Engineering*, vol 44, Feb 1972, p 4-8

Use of controlled expansion in the mechanical fastening of high performance structures The technique provides that a cylindrical fastener expands plastically during installation to a slightly hourglass shaped cross section Expansion is 1 to 2% of the hole diameter at the shear plane, and 3 to 5% at the surfaces The result is a joint with remarkable integrity and attractive in cost saving potential The advantages of controlled expansion are being incorporated into the fastening of the A300B wing structure after a critical study of the systems described, in comparison with all proven and potential alternatives F R L

A72 22907 # Civil compound helicopter *Aircraft Engineering*, vol 44, Feb 1972, p 10-12

Description of the SIAI Marchetti SV 20 A medium weight twin-engined winged helicopter intended for commercial and utility applications The major fail safe criterion is that all parts may be easily and completely inspected The helicopter is twin turboshaft, free-turbine-engine powered, is high winged, has a two blade teetering-hub main rotor, and a 4000 to 4500 kg maximum gross take off weight F R L

A72 22908 # The C band pulse beacon ranging system *Aircraft Engineering*, vol 44, Feb 1972, p 14 17

Description of the Honeywell YG 1081 collision warning system (CWS), which operates on a cooperative basis with other aircraft with like equipment The system is, in effect, a C band (5.08 GHz) pulse beacon ranging system Each CWS serves both an interrogation and response function There are three modes of operation the interrogation mode, the response mode, and the system test mode, all of which are described in detail F R L

A72-22909 # Quick estimation of wing structural weight for preliminary aircraft design E Torenbeek (Delft, Technische Hogeschool, Delft, Netherlands) *Aircraft Engineering*, vol 44, Feb 1972, p 18, 19 8 refs

Use of a compilation of formulas and data previously compiled to enable weight engineers to make a quick estimation of wing structural weight Application of the method to 46 samples of aircraft in a wide range of sizes demonstrates a standard deviation of 9.64%, which is satisfactory for point designs and parametric studies The method is based on a generalized expression for the material required to resist the root bending moment due to wing lift in a specified flight condition, while the average stress level is related to the loading index of the compression structure F R L

A72 22910 # Runway fog dispersal system *Aircraft Engineering*, vol 44, Feb 1972, p 22, 23

Description of the Turboclair fog dispersal system, which has the advantage of being effective on both warm and cold fog formations Furthermore, whatever the conditions, it can provide a visual ground reference at the crucial moment of decision This makes it possible to check the radio electronics, and the visibility provided allows takeoff at any time The system uses flight discarded turbojet engines positioned near the runway which is to be cleared They produce heat in a compact volume and their kinetic energy is used to mix the hot air with the fog F R L

A72-22936 Hybrid computation in aeronautical engineering K R Greene (Southampton, University, Southampton, England) *Aeronautical Journal*, vol 76, Feb 1972, p 97-100

The use of hybrid computation for helicopter simulations is discussed Particular attention is given to the nature of the integration processes involved, and a new hybrid approach to integration is explained It is shown that this technique extends the useful range of application of hybrid computation in aeronautical and other engineering disciplines O H

A72-22937 The calibration of a surface static tube J L Sproston and Ö T Goksel (Liverpool, University, Liverpool, England) *Aeronautical Journal*, vol 76, Feb 1972, p 101 103

The accuracy of representation of static pressure obtained from a static tube lying on a model surface was experimentally examined In the experiments, the static tube was mounted in two flows - i.e., in the flow over a flat plate in a zero pressure gradient, and in the flow over a specially designed airfoil Results are plotted and analyzed O H

A72-22938 Follower force instability of a pod mounted jet engine G T S Done (Edinburgh, University, Edinburgh, Scotland) *Aeronautical Journal*, vol 76, Feb 1972, p 103-107 6 refs

The follower force system, represented by a jet engine enclosed in a pod and mounted as a separate unit on the main aircraft structure, is studied The dynamics of a simplified model of this system is analyzed, and the results of experimental tests in the laboratory and computer calculations on a practical example are presented O H

A72-22940 The design of agricultural aircraft D Lockspeiser (British Aircraft Corp., Ltd., Commercial Aircraft Div., Weybridge, Surrey, England) (*Royal Aeronautical Society, Symposium on Agricultural Aviation, London, England, Jan 27, 1971*) *Aeronautical Journal*, vol 76, Feb 1972, p 121 125, Discussion, p 125-127

Typical examples of current agricultural fixed wing aircraft in use throughout the world are reviewed, and their parameters are compared Requirements and design features of optimum agricultural aircraft are discussed in terms of pilot safety, performance, engine characteristics, handling, and economic efficiency Finally, future developments are considered O H

A72-22947 # Study of the vibrations of an aerial camera during a cycle (Issledovanie kolebaniy aerofotoapparata vo vremia tsikla) Ia E Shcherbakov (Moskovskii Institut Inzhenerov Geodezii, Aerofotos'emki i Kartografii, Moscow, USSR) *Geodeziya i Aerofotos'emka*, no 6, 1970, p 94-98 In Russian

Mathematical treatment of vibrograms taken during an operational cycle of an aerial camera Correlation functions are obtained for angular vibrations of an operating aerial camera when its shutter is released for varying exposure times Approaches are proposed for damping the vibrations produced in an aerial camera by the operation of its mechanical system during the working cycle V Z

A72-22971 X-113 Am - An air and water hybrid (X-113 Am - Zwitter zwischen luft und Wasser) M Ziegler *Flug Revue/Flugwelt International*, Mar 1972, p 20 24 In German

Discussion of the airfoil concept in general, with special emphasis on the present X-113 Am, which is a single-seat airfoil ram-wing vehicle powered by a 40-hp Nelson four cylinder, horizontally opposed two-stroke engine driving a two blade propeller The

airframe is of special glass fiber construction, with a core of tubular or foam plastic. Results of extensive tests of this craft on Lake Constance are outlined. O H

A72-22972 Near misses - A critical discussion on an important topic (Fastzusammenstöße - Kritische Betrachtung zu einem aktuellen Thema) L. Abelshäuser. *Flug Revue/Flugwelt International*, Mar 1972, p. 25-28. In German.

Near misses within German airspace are considered. After presenting a report on the current situation, detailed attention is given to IFR/IFR air misses (including coordination of ATC stations, problems due to equipment failure, personal and planning problems), and to IFR/VFR air misses. Finally, measures are suggested for decreasing the risk of aircraft collisions. The measures include the introduction of air traffic flow control on an international basis, specific airspace for military VFR traffic, and collision avoidance systems in aircraft. Some advanced collision avoidance systems are briefly characterized. O H

A72-22973 Boundary layer blowing in the Buccaneer Mk 2 and the F-4K Phantom (Grenzschichtanblasung bei der Buccaneer Mk 2 und F-4K Phantom) J. G. Burns and M. Edwards (Hawker Siddeley Aviation, Ltd., Kingston-on-Thames, Surrey, England). *Flug Revue/Flugwelt International*, Mar 1972, p. 33-36. In German.

After a brief discussion of the philosophy of boundary layer control, blowing as it is applied to the Buccaneer and Phantom aircraft is described. The use of blowing for aircraft control during the takeoff and landing phases and for lateral and longitudinal control is dealt with. Finally, a comparison of the Buccaneer Mk 2 and the Phantom F-4K Phantom II performance is presented. O H

A72-23045 Modern fluid dynamics. Volume 2. Compressible flow. N. Curle (St. Andrews, University, Southampton, England) and H. J. Davies (Southampton, University, Southampton, England). London and New York, Van Nostrand Reinhold Co., 1971. 303 p. 15 refs. \$19.95.

A detailed account is given of the physical features of ideal and real compressible fluid flow. The fundamental equations governing the flow of a perfect compressible fluid are derived. The propagation of waves in a medium that is otherwise at rest and in a medium with a superimposed stream flow is considered. Methods of solving subsonic potential flow problems and supersonic flow problems are described, and an introduction is presented to transonic flow. A study is made of the three-dimensional problem with particular reference to supersonic flow past airfoils. The effects of viscosity and heat conduction are discussed with reference to the significance of the boundary layer in laminar flow. In particular, some attention is given to the very important practical problem in which a shock wave interacts with a laminar boundary layer. A B K

A72-23185 # Characteristics of a two-spool gas turbine engine in the case of engine speed reduction (Kharakteristiki dvukhval'nogo gazoturbinnogo dvigatelya pri sbrose oborotov turbo-kompressorov) I. A. Barskii. *Mashinostroenie*, no. 12, 1971, p. 85-88. In Russian.

The time dependence of the turbocompressor rpm, the gas temperature, and engine power is determined for the case where the turbocompressor speed is reduced from its nominal value at various idling speed fuel consumptions. It is shown that a rapid drop in engine power can be obtained without a heat exchanger by shutting off the fuel supply during engine speed reduction. For a gas turbine engine with a heat exchanger, the thermal inertia of the latter prevents rapid engine speed reduction even when the fuel supply is shut off. V P

A72-23186 # Characteristics of slotted-blade cascades of adjustable nozzle diaphragms of axial-flow turbines (Kharakteristiki reshetok razreznykh profilov reguliruemyykh soplovykh apparatov osevykh turbin) Iu. S. Kustarev. *Mashinostroenie*, no. 12, 1971, p. 88-92. In Russian.

The aerodynamic efficiency of plane slotted-blade cascades developed for gas-turbine engines of transport aircraft is determined experimentally. It is shown that the aerodynamic characteristics of properly selected slotted blades are practically equal to those of unslotted blades for a wide range of blade angles. The use of slotted blades in adjustable nozzle diaphragms is therefore justified. V P

A72-23270 A standardized procedure for evaluating the relative thermal life and temperature rating of thin-wall airframe wire insulation. D. K. Elliot (Lockheed-California Co., Burbank, Calif.). *IEEE Transactions on Electrical Insulation*, vol. EI-7, Mar 1972, p. 16-25. 19 refs.

A simple specific procedure utilizing the Arrhenius plot is presented and proposed as a basis for an IEEE Standard for determining the relative thermal life and temperature rating of aerospace wire insulation. Test data on life curves and thermal ratings are presented on six types of wire insulation of present interest in the aircraft industry. These results illustrate the ease of directly comparing the thermal life of various new thin wall insulation systems relative to the older insulation systems of known service characteristics. Included are three irradiated insulation systems and various insulations that utilize polyimide polymers. O H

A72-23310 # Up-to-date condition and automation prospects of aerial photo interpretation processes by the method of optical image filtering. I. A. Cherkasov (Laboratorium fur Aero methoden, Leningrad, USSR). In *Internationale Gesellschaft fur Photogrammetrie, International Symposium on Photointerpretation*, 3rd, Dresden, East Germany, September 10-16, 1970, Reports Part 2. Leipzig, Landwirtschaftsausstellung der DDR, 1971, p. 821-834. 11 refs.

Use of optical image filtering as a means of simplifying and facilitating the selection of various particulars of information contained in aerial photographs. Investigations are described which show that when interpreting aerial photographs the decisive factors influencing the quality of the filtered image are the construction peculiarities of the Fourier transformation two-dimensional spectrum. F R L

A72-23316 Sonic boom exposure effects. I 2 - The sonic boom. Generation and propagation. C. H. E. Warren (Royal Aircraft Establishment, Farnborough, Hants, England). *Journal of Sound and Vibration*, vol. 20, Feb 22, 1972, p. 485-497.

A description is given of the technical aspects of the generation and propagation of sonic booms in order to provide the background for an understanding of their effects on animate and inanimate objects. The physical aspects of boom propagation, focusing, and reception at the ground, and typical sonic boom characteristics are discussed, along with waveform freezing and distortion. M V E

A72-23317 Sonic boom exposure effects. I 3 - General considerations on sonic boom research. J. Balazard (Direction des Recherches et Moyens d'Essais, Paris, France). *Journal of Sound and Vibration*, vol. 20, Feb 22, 1972, p. 499-503.

Discussion of the requirements of sonic boom studies in various scientific disciplines, and review of the research facilities and techniques currently used for meeting these requirements. A general research philosophy is developed that could also aid in the development of research schemes in other areas of environment protection. M V E

A72-23318 **Sonic boom exposure effects II 1 Structures and terrain** G Weber (Hannover, Technische Universität Hannover, West Germany) *Journal of Sound and Vibration*, vol 20, Feb 22, 1972, p 505 509 15 refs

Evaluation of sonic boom effects on topographical features and ground motion effects on structures, and discussion of damage pertinent structural parameters. The attempt is made to present conclusive statements on sonic boom exposure and on occurrence of damage to structures on the basis of the extensive data on sonic boom damage accumulated over the past ten years. M V E

A72-23323 **Sonic boom exposure effects II 6 Sonic boom generators** C H E Warren (Royal Aircraft Establishment, Farnborough, Hants, England) *Journal of Sound and Vibration*, vol 20, Feb 22, 1972, p 535 539 15 refs

Review of the research facilities existing for the study of sonic boom effects, and discussion of the types of study for which these facilities are suitable. Sonic boom simulators for field and laboratory studies discussed include explosive charges, acoustic guns, traveling wave devices, speakers, and pistons. The characteristics are enumerated that research facilities must have in order that meaningful and relevant experiments may be performed. M V E

A72-23423 **Probability of aircraft encounters with hail** J Briggs *Meteorological Magazine*, vol 101, Feb 1972, p 33 38 7 refs

Estimates of the probability of aircraft encounters with hail are presented, they depend on several assumptions and cannot do more than indicate probabilities of hail within about a factor of 10. Nevertheless, comparisons made with actual aircraft experience are encouraging. The comparisons are least satisfactory for aircraft flying at the highest levels considered and so the extrapolation to the levels of most concern to supersonic transport may be less realistic though at these levels the estimates seem more likely to be pessimistic than optimistic as regards the probabilities of large hail being met.

A72-23431 # **Optimal control of linear passive plants (Ob optimal'nom upravlenii lineinymi passivnymi ob'ektami)** A A Krasovskii *Avtomatika i Telemekhanika*, Jan 1972, p 5 14. In Russian

Analytical synthesis of optimal controls for linear passive stationary plants whose coefficient matrices exhibit a symmetry that makes it possible to obtain very simple solutions for a number of given coefficients of the minimized functional. The prescribed part of the functional has a straightforward physical meaning. The use of one obtained solution is illustrated for an example problem involving the synthesis of a system for damping flexural vibrations of an aircraft. T M

A72-23446 **DC-10 design development** R E Bates (McDonnell Douglas Corp., St Louis, Mo) *Interavia*, vol 27, Mar 1972, p 228, 229

Review of the procedures by which the DC 10 was designed. The detailed configuration of the wing was developed through previous experience and through extensive use of high Reynolds number wind tunnel testing. Of particular importance from a performance standpoint is the drag rise characteristic which permits efficient cruise at Mach 0.85. A unique feature of the DC 10 is the mounting of strakes on the fixed cowl of the nacelle. With these strakes installed the resulting maximum lift coefficient was equal to that originally expected in the landing condition, and better than predicted in the takeoff region. The flight handling characteristics, structural development, and fatigue tests are discussed. F R L

A72-23447 **Variable pitch fans** D G M Davis (Dowty Rotol, Ltd., Gloucester, Glos., England) *Interavia*, vol 27, Mar 1972, p 241 243

Description of the technicalities of the variable pitch (VP) fan concept, with some thoughts for the future. The most important attribute of the VP fan is its thrust reversing capability. It provides the stopping power to balance the field length of the STOL aircraft at less cost and weight than the conventional reverser. Thrust can be modulated by change of rpm or pitch or both. VP is an essential element of the compound thrust/shaft engine, the combined propulsion and blowing engine for augmentor wing aircraft, and the single shaft engine. The relative quietness of the VP fan makes it attractive for operation close to community centers. F R L

A72-23448 **The DC 10 automatic flight guidance system** *Interavia*, vol 27, Mar 1972, p 244, 245

Description of a system that provides facilities in conditions down to Category IIIA. The system is organized in two isolated fail passive automatic landing systems, either of which is capable of controlling the aircraft throughout the landing phase. In the event of a malfunction occurring with both systems engaged, the failed system will disconnect or shut down without disturbing the aircraft's flight path, while the remaining dual system completes the landing without any degradation in performance. F R L

A72-23449 **Instrument landing systems Radio landing aids from the Zeppelin to Category III** E Kramar (Standard Elektrik Lorenz AG, Stuttgart, West Germany) *Interavia*, vol 27, Mar 1972, p 246 248

Review of the progress which has been made since the early days of flight in developing all weather landing aids. Four course radio ranges came into general use after 1928, and were soon adapted for guidance during approach and landing. Various vhf systems are described, as well as the Lorenz system for glide slope guidance. The ILS system developed by CAA and ITT, which has not been changed basically for 25 years except for technological improvements, is considered in detail. Attention is given to the British BLEU autoland system and the Bell GSN 5 radar system. F R L

A72-23450 **Automated navigation management in the cockpit** *Interavia*, vol 27, Mar 1972, p 258, 259

Consideration of the MONA (Modular Navigation) dual channel system. The system is composed of the Navigation Computer Unit (NCU), the Flight Data Storage Unit (FDSU), and the Control and Display Unit (CDU). The data of interest are for the most part a vast collection of ground referenced points, such as waypoints and nav aids, together with details about each point. The totality of route structure data stored in the FDSU contains the equivalent in digital magnetic tape form, of the data included in a pilot's flight bag of aeronautical charts representing his airline's route structure. F R L

A72-23451 **Symposium on Non-Linear Dynamics, Loughborough University of Technology, Loughborough, Leics., England, March 27, 28, 1972, Proceedings** Symposium sponsored by the British Acoustical Society and Royal Aeronautical Society. Edited by D J Johns (Loughborough University of Technology, Loughborough, Leics., England), P A T Christopher (Cranfield Institute of Technology, Cranfield, Beds., England), and A Simpson (Bristol, University, Bristol, England). Loughborough, Leics., England, Loughborough University of Technology, 1972. 325 p.

Topics discussed include nonlinear dynamic characteristics of a flight vehicle, nonlinear differential equations in problems of flight dynamics, nonlinear systems with n degrees of freedom, one half subharmonic oscillations, nonlinear vibrations of circular cylindrical shells, stability analysis in structural dynamics, the optimization of

landing gear suspension characteristics, effects of runway unevenness on a supersonic transport aircraft, random vibration of lumped mass systems containing nonlinear damping, the effect of aerodynamic nonlinearities on the normal acceleration response of a rigid aircraft, autoparametric nonlinear interactions between vibration modes, parametric instability of flat plates subjected to in plane periodic sinusoidal loading, the effect of frictional damping on beam vibrations, and mode coupling due to a nonlinearity in panel vibration

A B K

described by partial differential equations through the use of functional analysis. Some of the relevant concepts of functional analysis are described, including inner products, norms, completeness, Hilbert space, semigroup operators, Liapunov stability, and Liapunov functionals. A rather general method of constructing Liapunov functionals (called the P method) is then described, and the Liapunov functional analysis is then applied to a number of problems, including the wave equation with nonlinear damping, the stability of the Euler strut, including a 'follower force' case, divergence of an aircraft wing, including a nonuniform case, panel flutter, and feedback control of a flexible missile

A72-23452 Development of a technique for the analysis of non-linear dynamic characteristics of a flight vehicle. I M Titchener (Royal Aircraft Establishment, Farnborough, Hants, England). In Symposium on Non Linear Dynamics, Loughborough University of Technology, Loughborough, Leics, England, March 27, 28, 1972, Proceedings. Loughborough, Leics, England, Loughborough University of Technology, 1972, p. A 11 A 117

Development of a technique for the analysis of the nonlinear dynamic motion response of a class of flight vehicles typified by continuously changing damping and frequency. An existing approximate method for analyzing nonlinear differential equations having almost periodic solutions is adapted and further developed to give a technique applicable to this problem. The original method involved recasting the dependent motion variable in terms of a time dependent amplitude and phase, leading to a description of the dynamic behavior in the large in terms of a local damping parameter and frequency, each a function of the local amplitude. Since the flight dynamic problem exhibits certain asymmetries, an explicit parameter defining the local displacement of the center of oscillation is also required. This is shown also to be a function of the local amplitude. Analytic expressions for damping and frequency are obtained by integrating over a complete cycle of the oscillation, assuming small variation in amplitude, phase, and center of oscillation during this interval

A72-23458 The optimisation of undercarriage suspension characteristics by a deterministic method. J Reynolds, D J Johns, and R J Aird (Loughborough University of Technology, Loughborough, Leics, England). In Symposium on Non-Linear Dynamics, Loughborough University of Technology, Loughborough, Leics, England, March 27, 28, 1972, Proceedings. Loughborough, Leics, England, Loughborough University of Technology, 1972, p. C 11-C 131. 26 refs. Research supported by the Ministry of Technology

Contemporary with progress in structural design and increase in size of modern aircraft, the severity of runway induced vibration has increased. This has resulted in a corresponding increase in fatigue damage and reduction of passenger and crew comfort. Factors affecting the choice of a suitable cost function describing these phenomena are discussed. Finally, a cost function is postulated and nonlinear equations representing the motion of a symmetric aeroplane when taxiing over a defined runway profile are derived. Optimum suspension characteristics which minimise this cost function deterministically are thus obtained. The use of a hybrid computer to facilitate speed of solution is discussed. (Author)

A72-23453 Application of an approximate method of solving non-linear differential equations to some problems in flight dynamics. A J Ross (Royal Aircraft Establishment, Farnborough, Hants, England). In Symposium on Non Linear Dynamics, Loughborough University of Technology, Loughborough, Leics, England, March 27, 28, 1972, Proceedings. Loughborough, Leics, England, Loughborough University of Technology, 1972, p. A 21 A 220. 10 refs

Analytic solutions of equations of motion with nonlinearities present are given for a variety of aircraft responses which exhibit oscillatory behavior, obtained from an improved version of the Krylov and Bogoliubov method. As examples of second-order systems, some experimental results of control surface buzz are analyzed to give possible variation of hinge-moment damping with amplitude. For higher order systems, with one oscillatory mode, the lateral motion of a slender wing aircraft at high angle of attack is considered, the force and moments due to sideslip being nonlinear. The criterion for the existence of a limit cycle is found to be a modified form of Routh's discriminant, and comparisons with digital solutions show excellent agreement for the frequency and amplitude. (Author)

A72-23459 Some measured and calculated effects of runway unevenness on a supersonic transport aircraft. C G B Mitchell. In Symposium on Non Linear Dynamics, Loughborough University of Technology, Loughborough, Leics, England, March 27, 28, 1972, Proceedings. Loughborough, Leics, England, Loughborough University of Technology, 1972, p. C 21-C 216. 9 refs

Review of the practical consequences of runway unevenness for an SST, indicating which of the landing gear characteristics significantly affect vibration while taxiing, taking off, and landing. It is shown that for the SST class of aircraft cockpit vibration and structural fatigue damage during taxiing will be more severe than for subsonic transports unless special care is taken in the design of the main landing gear. It is necessary to use a lower value of air spring stiffness and to achieve a low value of oleo friction if excitation of the fuselage bending mode is to be avoided. (Author)

A72-23460 Random vibration with non-linear damping. C L Kirk (Cranfield Institute of Technology, Cranfield, Beds, England). In Symposium on Non Linear Dynamics, Loughborough University of Technology, Loughborough, Leics, England, March 27, 28, 1972, Proceedings. Loughborough, Leics, England, Loughborough University of Technology, 1972, p. C 31-C 318. 6 refs

Study of the reaction of linearly elastic, lumped mass systems containing nonlinear damping to ideal stationary Gaussian white noise excitation. A theoretical study is made of a random vibration absorber in which the damping force is proportional to the square of the relative velocity between the main mass and the absorber mass of the system. The taxiing induced random vibration of a two degree-of-freedom model of an aircraft on its main landing gear due to runway unevenness is considered. An experimental investigation is made of the random vibration of a built up beam having hysteretic damping

A72-23805 A near optimal closed-loop control law for a class of aircraft/aircraft pursuit-evasion differential games G M Anderson (USAF, Institute of Technology, Wright Patterson AFB, Ohio) and W L Othling, Jr (USAF, Flight Dynamics Laboratory, Wright Patterson AFB, Ohio) In Conference on Decision and Control, Miami Beach, Fla, December 15 17, 1971, Proceedings New York, Institute of Electrical and Electronics Engineers, Inc, 1971, p 449-500

A method called dynamic modeling is used to obtain near optimal closed loop control laws for a fixed time pursuit-evasion differential game between two aircraft in a vertical plane This dynamic modeling technique involves simplifying the aircraft dynamics until a closed loop control law can be found The closed-loop control law for the simplified game is then used as a basis for obtaining a near optimal closed-loop control law for the game with realistic aircraft dynamics Results of two examples are presented to demonstrate the validity of this near optimal control law

(Author)

A72-23807 Aircraft parameter identification using state-sensitivity functions M R Cannon, D K Frederick, and H Kaufman (Rensselaer Polytechnic Institute, Troy, NY) In Conference on Decision and Control, Miami Beach, Fla, December 15-17, 1971, Proceedings New York, Institute of Electrical and Electronics Engineers, Inc, 1971, p 521-523

The problem presented in this paper is the identification of eleven parameter values of a 4th-order state equation used to model the incremental lateral dynamics of an aircraft subject to a step aileron deflection The objective is to minimize the difference

between the model's response and recorded inflight test data in a least squares sense. State sensitivity functions, which describe the variation in the model's state response for small, constant parameter perturbations, are used to develop an iterative solution to the identification problem. Results for three sets of initial parameter values show that the method rapidly converges to the same solution set. (Author)

A72-23818 Associative processing in an air traffic control environment. W. C. Meilander and R. G. Gall (Goodyear Aerospace Corp., Akron, Ohio). In: Hardware, software, firmware trade-offs, Proceedings of the Fifth Annual International Computer Society Conference, Boston, Mass., September 22-24, 1971.

New York, Institute of Electrical and Electronics Engineers, Inc., 1971, p. 129, 130.

Evaluation of the STARAN IV-X associative array processor for additional automation functions in air terminal control. Functions studied and evaluated include aircraft tracking, conflict prediction, and conflict resolution. The ease of programming and the processing rate are also considered, together with the significance of conflict operations to the controller. T. M.

A72-23820 The use of system methodology to resolve filtering deficiencies. W. H. Harrison (General Dynamics Corp., Fort Worth, Tex.). In: Hardware, software, firmware trade-offs, Proceedings of the Fifth Annual International Computer Society Conference, Boston, Mass., September 22-24, 1971. New York, Institute of Electrical and Electronics Engineers, Inc., 1971, p. 197, 198.

Description of a digital test station developed for intermediate-level support of the navigation system in FB-111 airplanes. Requirements dictated inertial reference unit (IRU) calibration that would be simultaneous with functional testing of a specific line-replaceable unit. Circuitry peculiar to the IRU interface did not contain sufficient filtering to prevent power cycling noise spikes that generated false alarms terminating the calibration. The application of systems methodology to the design of appropriate filters is described. T. M.

A72-23846 The International Air Transport Association - A case study of a quasi-governmental organization. R. Y. Chuang Leiden, A. W. Sijthoff International Publishing Co., 1972. 200 p. \$10.85.

The background of international aviation before 1944 is discussed together with the results of the Chicago Conference, 1944, details regarding the Bermuda Agreement of 1946, and provisions concerning rates and IATA in other international bilateral air transport agreements. Organization and functions of IATA in general are considered along with the traffic conference machinery, the outputs of the conferences and government reservations, the enforcement of IATA traffic conference resolutions, the economics of air transportation, and the legal nature of public corporations and mixed enterprises. G. R.

A72-23851 # Maintainability - An effective engineering discipline. H. M. Sohn (Lockheed Georgia Co., Marietta, Ga.). *Logistics Spectrum*, vol. 6, Spring 1972, p. 11-17.

Review of the general success prerequisites of a maintainability program, description of the maintainability characteristics of the C-5A Galaxy aircraft, and discussion of some of the problems encountered and resolved during the C-5A program. Real and purposeful maintainability features of any system or component are shown to be numerous and seemingly insignificant. Like locating a part a little differently to improve access to its attaching fasteners, or making an access panel large enough not only to get both hands through it, but also to be able to see what is being done. There is

little glamour connected with incorporating these small features into an end item. It takes a well established and properly managed maintainability program to let slip none of these features. M. V. E.

A72-23853 Symposium on Internal Flows, University of Salford, Salford, Lancs., England, April 20-22, 1971, Proceedings. Salford, Lancs., England, University of Salford, 1971. 332 p.

The invited lecture considered turbulence models and their application to the prediction of internal flows. The other papers deal with diffusers, viscous, inviscid, and unsteady flows, and complex ducts and flows. The study of viscous flows includes turbulent boundary layers, recirculating flows, and the computation of turbulent flows.

F. R. L.

A72-23855 A calculation method for the pressure recovery produced by diffusers fitted with tailpipes. E. F. C. Ferretti and D. Lampard (Nottingham University, Nottingham, England). In: Symposium on Internal Flows, University of Salford, Salford, Lancs., England, April 20-22, 1971, Proceedings. Salford, Lancs., England, University of Salford, 1971, p. A1-A8. 9 refs. Research supported by the Ministry of Technology.

A calculation method is presented for the pressure recovery arising from the subsonic, adiabatic flow of air through diffusers fitted with tailpipes when the boundary layer is turbulent at the diffuser inlet, and a potential core exists throughout the flow. The method is not restricted to attached flows having been developed specifically to deal with the case in which separation is deliberately induced by truncation of the diffuser. When flow separation occurs, the location of the pressure maximum in the tailpipe is not predicted. Although the analysis is presented for the axisymmetric case, modification to the two dimensional case is straightforward. The predicted overall pressure recovery is compared with experimental results for full and truncated conical diffusers, and for sudden enlargements. Agreement is seen to be good, generally better than 2%. (Author)

A72-23856 Measurements of the overall performance and boundary layer growth in an annular diffuser. S. J. Stevens and G. J. Williams (Loughborough University of Technology, Loughborough, Leics., England). In: Symposium on Internal Flows, University of Salford, Salford, Lancs., England, April 20-22, 1971, Proceedings. Salford, Lancs., England, University of Salford, 1971, p. A9-A18. 18 refs. Research supported by the Science Research Council.

Low speed tests have been carried out to investigate the performance of an optimum annular diffuser having a center body of uniform diameter and a conically diverging outer wall. Measurements were made of the pressure recovery, and the growth of the boundary layers in terms of the mean velocity profile and turbulence structure. The data suggests that the flow in the initial stages of diffusion is dominated by the pressure gradient, and in these circumstances the existing two part methods of representing velocity profiles are no longer valid. The rate of growth of the shape parameters was found to be considerably greater along the outer wall, this effect is attributed to the distortion caused by the flow curvature at inlet which is then accentuated by the adverse pressure gradient. For this diffuser geometry boundary layer types of inlet blockage were found to have only a minor influence on the overall pressure recovery coefficient. (Author)

A72-23857 Boundary layer development in an annular diffuser. D. Hoadley (Central Electricity Generating Board, Marchwood Engineering Laboratories, Southampton, England). In:

Symposium on Internal Flows, University of Salford, Salford, Lancs, England, April 20-22, 1971, Proceedings
Salford, Lancs, England, University of Salford, 1971, p A19-A31 33 refs

The turbulent boundary layers on the conical casing and cylindrical hub of an annular diffuser containing a free vortex swirl were measured. Separation occurred on the casing in zero swirl but under high swirl the separation was transferred to the hub. Reasonable agreement with the predictions of an integral method incorporating the three dimensional entrainment equation was obtained if the interaction of the boundary layer with the main stream was taken into account. The skewing of the boundary layer and the nature of the hub separation produced in swirling flow requires further investigation. (Author)

A72-23858 The response of diffusers to flow conditions at their inlet. C I Bradley (Gas Council, Midlands Research Station, Solihull, Warwicks, England) and D J Cookrell (Leicester, University, Leicester, England). In Symposium on Internal Flows, University of Salford, Salford, Lancs, England, April 20-22, 1971, Proceedings. Salford, Lancs, England, University of Salford, 1971, p A32-A41 20 refs. Research sponsored by the Ministry of Aviation Supply.

The paper first briefly considers the available experimental data on the response of conical diffusers to the variation of the time mean velocity distribution and the turbulence intensity at inlet. A mean velocity profile generator is next described which permits the independent assessment of the effects of inlet mean velocity and turbulence variation. Downstream of this generator pressure recovery characteristics were obtained over a wide range of expansion angle and area ratio. These results are discussed. The problems entailed in establishing a computational method which considers the inlet turbulence level as a parameter affecting diffuser pressure recovery are reviewed. The paper concludes by setting the flow conditions at the inlet to diffusers in their industrial context. Incompressible fluid flow is assumed throughout. (Author)

A72-23859 Rapid diffusers based on the egg box principle. T V Lawson (Bristol, University, Bristol, England). In Symposium on Internal Flows, University of Salford, Salford, Lancs, England, April 20-22, 1971, Proceedings. Salford, Lancs, England, University of Salford, 1971, p A42-A46 5 refs.

The paper starts with a conventional diffuser and tries to demonstrate that the loss of efficiency as its included angle is increased is caused by the spread of the separated regions and not by separation itself. One type of rapid diffuser can be devised with the object of reducing the spread of these regions and diffusers of this type are nicknamed 'Egg Box' Diffusers. The second part of the paper describes the performance, shortcomings and remedies of several diffusers of this type designed as parts of wind tunnels. (Author)

A72-23860 Improvement of wide angle conical diffuser performance by means of conical vanes. J T Turner (Manchester, Victoria University, Manchester, England). In Symposium on Internal Flows, University of Salford, Salford, Lancs, England, April 20-22, 1971, Proceedings. Salford, Lancs, England, University of Salford, 1971, p A47-A55 12 refs.

Some experiments have been carried out to determine whether the use of conical splitter vanes can produce worthwhile improvements in the performance of wide angle conical diffusers. The vanes were designed using a simple equivalent conical diffuser concept. Systematic tests have been made for one diffuser (60 deg and 8.27 area ratio) using different vane configurations and taking the static pressure recovery as the main criterion of performance. The best vane system produces a three times improvement in the effectiveness

of the diffuser. An analysis of these results, together with information obtained from flow visualization, suggests how the vane geometry should be modified to improve the performance still further. The effect of changing the inlet flow distribution by altering the length of the diffuser entry pipe is also discussed. (Author)

A72-23861 Compressible flow in a radial vaneless diffuser. N Watson and D R Ingham (Hatfield Polytechnic, Hatfield, Herts, England). In Symposium on Internal Flows, University of Salford, Salford, Lancs, England, April 20-22, 1971, Proceedings. Salford, Lancs, England, University of Salford, 1971, p A56-A65 14 refs. Research supported by the Science Research Council and C A V, Ltd.

The radial vaneless diffuser is a major source of inefficiency in centrifugal compressors. In attempting to increase its efficiency, a better understanding of the flow and a method of loss prediction are desirable. Results from an extensive experimental investigation into the flow in the diffuser of a small, high speed centrifugal compressor (using hot-wire anemometers) are shown. A theoretical analysis is presented which predicts the total pressure loss at the diffuser entry, due to the mixing out of unsteady flow from the impeller tip. The analysis then takes account of compressibility, wall friction and gradual area changes through the diffuser. Theoretically predicted results for a range of diffusers are compared with their experimental performance to illustrate the accuracy and limitations of the solution. (Author)

A72-23862 Turbulence characteristics in a straight conical diffuser. A C Trupp, R S Azad, N W Wilson, and P A C Okwuobi (Manitoba, University, Winnipeg, Manitoba, Canada). In Symposium on Internal Flows, University of Salford, Salford, Lancs, England, April 20-22, 1971, Proceedings. Salford, Lancs, England, University of Salford, 1971, p A66-A72 16 refs. Research supported by the National Research Council of Canada.

The turbulence structure of subsonic air flow was investigated in a straight conical diffuser having a total included angle of 8 deg and an area ratio of 4.1. Radial distributions of mean velocity, turbulence intensities and Reynolds stresses at twelve stations along the diffuser were obtained via hot wire anemometry measurements for two flow rates. A direct linear effect of Reynolds number on the root mean square velocity fluctuations was indicated. The relationship between turbulent shear stress and turbulent kinetic energy was found to be identical to that which exists for other flow types. (Author)

A72-23870 Effect of rotation on the development of the turbulent boundary layer. D W Hughes and J H Horlock (Cambridge University, Cambridge, England). In Symposium on Internal Flows, University of Salford, Salford, Lancs, England, April 20-22, 1971, Proceedings. Salford, Lancs, England, University of Salford, 1971, p B78-B89 27 refs.

Effect of simultaneously acting rotational and centrifugal (or Coriolis) forces on the development of a turbulent boundary layer. A detailed description is given of the flow modification that results for a swirling flow over a rotating cylinder, the case that may arise on the hub of an axial flow turbomachine. The centrifugal or Coriolis forces lead essentially to changes in the turbulent structure of the boundary layer and in the shear stress distribution. A qualitative description is given of the shear stress modification in terms of a mixing length change. If an integral prediction method is used, with the moment of momentum integral equation as an auxiliary equation, the shear stress modification may immediately be incorporated into the calculation method. (Author)

A72-23872 Complex annular ducts for use in gas turbine engines - Current problem areas in their design. K F Burrill and R

W Barnes (Rolls Royce, Ltd, Derby, England) In Symposium on Internal Flows, University of Salford, Salford, Lancs, England, April 20-22, 1971, Proceedings Salford, Lancs, England, University of Salford, 1971, p B98-B108 5 refs

The problems in the design of intercomponent ducts for modern gas turbine engines are outlined. The limitations of the present design methods are discussed in the light of past experience. This previous work illustrates the effect of component operation on duct performance and the difficulties that arise in trying to simulate duct entry conditions by means of spoiler systems. Suggested future research work, theoretical and experimental, required to improve the available methods is presented. (Author)

A72 23928 Laser recording real-time imagery S I Swinney (Honeywell, Inc., Minneapolis, Minn.) In Symposium on Electron, Ion, and Laser Beam Technology, 11th, University of Colorado, Boulder, Colo., May 12-14, 1971, Record

San Francisco, San Francisco Press, Inc., New York, Institute of Electrical and Electronics Engineers, Inc., 1971, p 17-26

Description of a laser recorder display subsystem for use in tactical reconnaissance aircraft. The proposed arrangement is a high resolution storage subsystem for scan conversion of a line scanning sensor and features near real time viewing of the recorded and developed imagery with demonstrated recording and development in the 1- to 3.2 sec time range. It provides a permanent hard copy recording of the sensor output and also has provision for remote viewing of the film, thus minimizing the display installation in the cockpit area. A B K

A72 23984 The reliability program of the airborne computer CK37 B Jiewertz (Saab Scania AB, Linköping Sweden) In Annual Reliability and Maintainability Symposium, San Francisco Calif., January 25-27, 1972, Proceedings New York, Institute of Electrical and Electronics Engineers, Inc., 1972, p 158-165 12 refs

This paper describes a reliability program which was started in 1963 in connection with the development of an airborne computer (CK37) for the Swedish aircraft SAAB 37 Viggen. The general purpose computer, now in serial production, also includes an input/output unit which transfers analog and binary signals to joint operating equipment in the data handling system of the aircraft. A total of 42,500 operating hours from seven computer prototypes have been accumulated up to the end of 1970. All operative failures have been recorded and analyzed. This has given a total failure rate of 600/850 failures/1,000,000 hr referred to the ground operating mode. The demonstrated failure rate of these prototype computers is of the same magnitude as was predicted for the serial production units during the early prototype design phase. (Author)

A72-23999 Reliability design for an airborne ecological system L S Gephart and V Balachandran (Dayton, University, Dayton, Ohio) In Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 25-27, 1972, Proceedings New York, Institute of Electrical and Electronics Engineers, Inc., 1972, p 393-399 5 refs

In the reliability design and prediction of an airborne ecological system for jumbo jets, failure was defined as 'that operating condition which could cause the aircraft to be delayed in performing its stated mission, until the failure is repaired'. This operating condition is directly related to 'adequacy' of the flushing of toilets in the 'rest rooms'. A multiple server queueing model presented describes the reliability prediction and design for such an airborne ecological system. G R

A72 24012 Reliable interconnections for Army avionics J Spergel and E F Godwin (U S Army, Electronics Technology and Devices Laboratory, Fort Monmouth, N.J.) In Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 25-27, 1972, Proceedings New York, Institute of Electrical and Electronics Engineers, Inc., 1972, p 499-509 8 refs

Wire post terminations are discussed together with flat conductor cables and connectors, connectors with universal terminations, and a new matrix interconnection system concept for Army avionics. The concept of reliability includes statistical evidence of performance, simplified and easier methods of installation and maintenance, and inspectability. An extensive evaluation program was conducted to determine the best technique for terminating flat conductor cables with electrical connectors. G R

A72-24019 Development of Douglas commercial aircraft reliability programs D L Gilles (Douglas Aircraft Co., Long Beach, Calif.) In Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 25-27, 1972, Proceedings New York, Institute of Electrical and Electronics Engineers, Inc., 1972, p 578-585

The Douglas Aircraft Company's reliability efforts on commercial aircraft up through the DC 8 were informal, following the traditional engineering pattern of development and continuous product improvement. With the advent of the DC 9, which was designed for short routes with frequent stops at small airports, assurance of early profitable airline operation depended on a more formalized but strongly hardware oriented reliability effort. This effort stressed major simplification of systems, a priority for design decisions based on the effect of equipment failure on aircraft utilization, component selection and improvement based on extensive historical operating data from airline experience, and optimum redundancy arrangements arrived at through reliability logic diagrams and probability calculations. Because of the marked success of these techniques and the increased sophistication and complexity of the DC 10 airplane, a further expansion of formal reliability design techniques and program controls has been implemented on the DC 10, including firm reliability guarantees on subsystems and components. A72-24025 Corrosion resistant features of jumbo jetliners require fabrication and product innovations D A Petrino (Thiokol Chemical Corp., Trenton, N.J.) *Materials Protection and Performance*, vol 11, Mar 1972, p 53, 54

To reduce the need for maintenance and repair downtime, the designers of the L 1011 TriStar specified 7075 T6 clad wing skins and 2024-T3 clad fuselage skins, sulfuric acid anodizing, and inhibiting adhesive fluid resistant primers. It was also specified to use sealing compounds which combine the corrosion resistant properties of a chromate inhibitor and the moisture-and-fuel resistant characteristics of polysulfide polymer rubber. G R

A72 24036 Microwaves step up to transportation and communications needs R T Davis *MicroWaves*, vol 11, Mar 1972, p 39, 40, 42, 44

Microwave equipment for terminal air traffic control applications is described, together with the use of millimeter waves in detection of clear air turbulence and for satellite communications. The conventional microwave landing system which provides guidance signals in space by using very narrow scanning fan beams is contrasted with the Doppler scanning beam concept that provides comparable angular resolution while transmitting a continuous signal with higher data rates and averaging. Cylindrical arrays serving as a beacon interrogator are discussed, along with beam scanning concepts. Detection of atmospheric temperature anomalies, railroad

crossing sensors, vehicle safety research, millimeter communications employing phase-shift keying, and satellite communications systems are described T M

A72-24107 Contribution to a study of the aerodynamic noise of airfoils (Contribution à l'étude du bruit aérodynamique des profils) J-P Bridelance, J Cyffers, A J de la Combe, and R Ouziaux (Etablissements NEU, Conservatoire National des Arts et Métiers, Lille, France) *Académie des Sciences (Paris), Comptes Rendus, Série B - Sciences Physiques*, vol 274, no 5, Jan 31, 1972, p 312-315 In French

Experimental study of the noise produced by a gas jet flowing around an airfoil A study is made of the turbulence noise and the pure sound emitted by cylinders and plates placed in a gas jet, and recommendations are made concerning the reference length to be chosen in each case for the calculation of the Strouhal number It is shown that for an isolated airfoil the pure sound can be reduced or eliminated by the choice of a large relative thickness or a large angle of attack The noise persists, however, at much larger angles of attack in the case of a blade cascade A B K

A72-24115 On some problems concerning constant vortex shearing flows around a fixed airfoil (Sur quelques problèmes concernant les écoulements de cisaillement à tourbillon constant autour d'un profil fixe) J Obala (Besançon, Université, Besançon, France) *Académie des Sciences (Paris), Comptes Rendus, Série A - Sciences Mathématiques*, vol 274, no 6, Feb 7, 1972, p 505-507 In French

Study of an airfoil fixed between two parallel rectilinear walls The calculation of aerodynamic forces is complicated in the general case, however, it can be shown that the resultant is perpendicular to Ox In the case where the intermediate airfoil is a symmetrical circle in relation to the real axis the calculations are simplified A theory of the thin wing in an unbounded fluid is developed, and a rectilinear airfoil below a free line is considered in terms of linear theory F R L

A72-24146 Acoustic monitoring of airframe structural proof testing J S Green and B W Toney (General Dynamics Corp., Convair Aerospace Div., Fort Worth, Tex.) *Journal of Environmental Sciences*, vol 15, Jan-Feb 1972, p 20-23

A Structural Acoustic Monitor (SAM) system was developed for the determination of the origins of noise events indicating possible damage during structural loading of the F-111 series of aircraft The SAM system, as utilized during low temperature, proof load testing, provides for the recording and aural monitoring of 12 channels of acoustic data derived from accelerometers mounted strategically on the test aircraft The system records a load signal generated by the control computer and a coded time signal which is synchronized with the computer clock G R

A72-24169 Where is the 'optimum' runway system - Proposals for high-capacity runway systems at major airports K Schnauffer *Airport Forum*, Mar 1972, p 7, 9, 11, 13-16 In English and German

It is pointed out that under present operational conditions a large number of aircraft very often have to wait in the stack because the capacity of the runway facilities is too low to accept approaching aircraft fast enough In addition, aircraft have to wait in line for takeoff Time losses connected with this procedure are not acceptable in an era of mass transport The runway systems of the future must be designed in such a way that an 'optimum' number of aircraft movements is possible Guidelines for such runway systems are discussed together with an all runway airport, a three- and four-runway system with conventional taxiways, and a narrow eight runway system G R

A72-24170 Britain's regional airports - Outlook unsettled A H Stratford and D M Lumb (Alan Stratford and Associates, Maidenhead, Berks., England) *Airport Forum*, Mar 1972, p 38-46 10 refs In English and German

The development of civil airports in Great Britain during the 25 post-war years has followed an ad hoc pattern without a unified policy or a formal national plan Airports not operated by the British Airports Authority are considered Particular attention is given to airports handling transport aircraft and providing facilities for the air carriers who offer scheduled and nonscheduled services on the various domestic and international routes The pattern of airport ownership and development is discussed together with aspects of regional planning for UK airports, development projects in hand, the effects of changes in traffic patterns, and the noise problem G R

A72-24171 Taxiing guidance and surface traffic control on airports C Woltge (Hannover, Technische Universität, Hanover, West Germany) *Airport Forum*, Mar 1972, p 81, 82, 84-86 (10 ff.) 15 refs In English and German

In all countries that are contracting members of ICAO, ground movements at airports follow largely standardized procedures ICAO procedures are discussed, taking into account ICAO publications and their classification After touchdown, the pilot must brake his aircraft, roll out, branch off into the turn off indicated to him by the controller, taxi on a specified route to the apron and there steer into the stand allotted him by the airport operator Two models, differing in terms of reference and results, have been worked out in recent years to overcome certain difficulties in surface traffic control G R

A72-24196 # Stability of simply supported skew plates under combined loading Mahabalaraja and S Durvasula (Indian Institute of Science, Bangalore, India) *ASME, Transactions, Series E - Journal of Applied Mechanics*, vol 39, Mar 1972, p 310, 311 15 refs Research sponsored by the Council of Scientific and Industrial Research of India

Interaction curves for buckling under combined loading are presented for simply supported rhombic plates of an aspect ratio of 1 These data are expected to be useful in wing and tail design applications for modern high-speed aircraft and missiles M V E

A72-24218 Warping of completely ventilated lifting surfaces (Vrillage des surfaces portantes totalement ventilées) L F Tsen and M Guilbaud (Poitiers, Université, Poitiers, France) *Académie des Sciences (Paris), Comptes Rendus, Série A - Sciences Mathématiques*, vol 274, no 9, Feb 28, 1972, p 802-805 In French

Discussion, for a wing of given plan form, of the use of warping as a means of control of load distribution along a wing span, and consequently of control of the induced drag The results of a study of the effect of warping in linear theory, and of wind tunnel experiments, are summarized F R L

A72-24271 TriStar R-Nav system certification nears K J Stein *Aviation Week and Space Technology*, vol 96, Mar 20, 1972, p 46, 47, 49-52

A highly automated modular area navigation system (Mona) developed for the Lockheed L 1011 TriStar wide body jet transport has progressed into the final phase of formal flight demonstrations for the Federal Aviation Administration Four major elements comprise the Mona system including a navigation computer unit, a flight data storage unit, a control display unit, and an electronic automatic chart system G R

A72-24273 # Accelerations during parachute deployment J W Sparkman, Jr and A L Morris (National Center for Atmospheric

Research, Boulder, Colo.) *Facilities for Atmospheric Research*, Sept 1971, p 17-20

With the current trend to heavier payloads and the release of payloads from higher altitudes, parachute failure may become more of a problem in the future. Initial developmental work on a system designed to cause the parachute to open more reliably and with low accelerations was conducted. The system uses a pneumatic tube encircling and attached to the canopy of the parachute. During ascent of the balloon the decrease in ambient pressure causes the tube to pressurize. After release, the continuing outward force exerted by the tube causes rapid completion of the parachute's opening. G R

A72-24320 The development of a full-scale aircraft turbine engine controlled environment corrosion test. J E Newhart and W W Wagner (US Naval Air Propulsion Test Center, Philadelphia, Pa.) *National Association of Corrosion Engineers, Conference on Corrosion, St Louis, Mo., Mar 20-24, 1972, Paper 76-9 p*

Description of an improved corrosion susceptibility test developed for aircraft gas turbine power plants used by the Navy air arm, in particular for shaft power gas turbines installed in fleet based helicopters. It represents an accelerated full scale 150-hour engine endurance test performed in a controlled environment. The conditions (simulating the natural salt environment) for the 48-hour corrosion test cycle, which includes 6 hours of actual engine operation, are outlined. The cycle reflects the most significant aspects of the adverse conditions encountered in fleet operations. High turbine temperatures dictated by mission requirements, exposure to high salt concentrations, and long periods of high ambient temperatures and humidities are the considerations used in designing engine operation, dynamic soak, and static soak phases of the test schedule. By insuring the gas turbine engine and its components against unscheduled maintenance and repair, the test should provide the Navy with a reliable engine for a given period of operation. V P

A72-24331 On the noise of a nearly ideally expanded supersonic jet. C K W Tam (MIT, Cambridge, Mass.) *Journal of Fluid Mechanics*, vol 51, Jan 11, 1972, p 69-95 32 refs

A noise generation mechanism for a nearly ideally expanded supersonic jet is proposed. It is suggested that the dominant part of the noise of a supersonic jet is generated at two rather localized regions of the jet. These regions are located at distances quite far downstream of the nozzle exit. Large-scale instabilities of the jet flow are believed to be responsible for transferring the kinetic energy of the jet into noise radiation. An analysis based on a simple mathematical model reveals that two large scale unstable waves are preferentially amplified in a supersonic jet. The rapid growth of these waves causes the oscillations of the jet to penetrate the mixing layer at two locations and to interact strongly with the ambient fluid there. This gives rise to intense noise radiation. Theoretical results based on the proposed noise generation mechanism are found to compare favourably with experimental measurements. A simple scaling formula is also derived. (Author)

A72-24490 Advances in radar technology I - The effects of electronics and data processing (Fortschritte in der Radartechnik I - Auswirkungen der Elektronik und der Datenverarbeitung) H Becker *VDI-Z*, vol 114, no 4, Mar 1972, p 235-238 18 refs. In German

Primary radar makes the location, pursuit, and relative velocity measuring of flying objects. It cannot, however, identify these objects which is a function of paramount importance for air traffic control. This latter function devolves upon secondary surveillance radar that in combination with primary radar and with the aid of a

digital computer is shown to make possible various more or less automated air surveillance systems providing a foundation for effective air traffic control. M V E

A72-24497 # Measurement of the angular velocity of a flight vehicle by linear accelerometers (Ob izmerenii uglovoi skorosti letatel'nogo apparata lineinymi akseleometrami) Ia L Lunts and V V Khabalov *Priborostroneniye*, vol 14, no 12, 1971, p 73-76. In Russian

Equations are derived which describe the motion of the sensitive masses of three accelerometers relative to a frame of reference tied to the flight vehicle. The equations of motion are used to obtain algorithms for calculating angular velocity components of the vehicle. T M

A72-24562 Wall effect in cavitating flow past a thin jet-flapped foil. T Kida and Y Miyai (Osaka Prefecture University, Osaka, Japan) *Quarterly Journal of Mechanics and Applied Mathematics*, vol 25, Feb 1972, p 83-103 6 refs

A theory is introduced to study the effect of the rigid walls of a tunnel on a supercavitating foil with a thin jet flap. The analytical formulation is derived as an integro-differential equation with singular kernels from the boundary-value problem of a harmonic function (Riemann-Hilbert problem). The lift coefficient can be obtained in terms of the forward uniform velocity normalized with respect to the far downstream velocity (i.e., the cavitation number). Linearized first and second-order theories are formulated by means of a small-perturbation technique. Numerical calculations were carried out using the linear and second order theories. Results of these calculations indicate that the derivatives of lift coefficient with respect to the incidence angle and to the jet deflection angle (lift slopes) are remarkably affected by the rigid walls, especially in the case when the foil approaches to the lower wall in a tunnel. (Author)

A72-24563 Laminar film condensation in forced flows. P Beckett and G Poots (Hull University, Hull, Yorks., England) *Quarterly Journal of Mechanics and Applied Mathematics*, vol 25, Feb 1972, p 125-152 12 refs

Two dimensional laminar film condensation on a surface is investigated on the basis of boundary layer theory. The case of flow past a semi infinite flat plate, which is aligned parallel to a uniform mainstream is discussed by means of a perturbation analysis for both small and large rates of cooling at the surface. Predictions, for this similar solution of the boundary layer equations, are compared with exact numerical solutions in the case of steam water condensation. The perturbation analysis is then extended to treat nonsimilar flows and results on steam water condensation are compared with exact numerical solutions obtained using the Hartree Womersley method. The cases of potential flow past a circular cylinder and past a flat plate with retarded mainstream are used for comparison. (Author)

A72-24654 # Adaptation of the hydraulic tank to flow visualization in turbomachines (Adaptation de la cuve hydraulique a la visualisation de l'écoulement dans les turbomachines) H Werlé and M Gallon (ONERA, Châtillon sous Bagneux, Hauts-de-Seine, France) *La Recherche Aéronautique*, Jan Feb 1972, p 15-21 8 refs. In French. Research supported by the Direction des Recherches et Moyens d'Essais.

The hydraulic tank, up till now used only for experiments on fixed models with jets or moving parts, has been adapted for visualizing the internal flow in rotating systems, in particular in an axial turbomachine model. The paper gives a description of the equipment and the methods used, and presents a few examples of visualizations obtained during their development. These first results

confirm and add to those provided by other devices for hydraulic or aerodynamic testing. They give a preview of fruitful comparisons for the studies at present under way. (Author)

A72 24655 # Adaptation of lidar to aircraft and missile ranging (Adaptation d'un lidar a la telemetrie des avions et des missiles) P. Weber (ONERA, Châtillon sous Bagneux, Hauts-de-Seine, France) *La Recherche Aéronautique*, Jan-Feb 1972, p. 23-35. 12 refs. In French.

From its inception, lidar has been considered as a remarkable localization instrument due to its space and time coherence. The operating conditions of lidar on satellites and on aircraft or missiles are compared. Means for adapting one case to the other are proposed. Results obtained with ONERA experimental lidars are presented: an accuracy of about 0.8 m and a reproducibility of about 1.3 m (rms) were obtained on a vehicle carrying cube corner reflectors. (Author)

A72-24656 # Preliminary results of a study of infrared emission from a hot jet (Resultats préliminaires de l'étude de l'émission infrarouge d'un jet chaud) J. F. de Belleval, M. Perulli (ONERA, Châtillon sous Bagneux, Hauts-de-Seine, France), G. Richter, and C. Schmidt (SNECMA, Paris, France) (*Association Française des Ingénieurs et Techniciens de l'Aéronautique et de l'Espace et Groupement des Acousticiens de Langue Française, Colloque d'Acoustique Aéronautique*, 2nd, Paris, France, May 4, 5, 1971) *La Recherche Aéronautique*, Jan-Feb 1972, p. 37-45. 9 refs. In French.

The axial and transverse profiles of turbulence intensity and of the characteristic parameters of turbulence (convection speed, lifetime, integral scale, spectrum, etc.) are measured by means of an optical system in which mirrors focus the infrared emission of sub- or supercritical hot jets upon detectors. The sound-infrared correlations and a comparison of the spectra show that this method of measurement can be used to determine the characteristic features of sound sources within a turbulent medium when temperature is sufficiently high. (Author)

A72-24657 # Reynolds number effects on a model equipped with high lift devices (Influence du nombre de Reynolds sur une maquette hypersustentée) X. Vaucheret (ONERA, Châtillon sous Bagneux, Hauts-de-Seine, France) *La Recherche Aéronautique*, Jan-Feb 1972, p. 52, 53. In French.

Experimental investigation of Reynolds number effects on the incidence angle at which boundary layer separation occurs and on the maximum lift coefficient of a fixed-wing aircraft model equipped with high-lift devices. The study was conducted over a wide range of Reynolds number values at the variable-pressure wind tunnel facility at Modane-Avrieux. M. V. E.

A72-24682 Stochastic optimization of some of the design parameters of airborne laser seeker systems. W. H. Clearfield (Ford Motor Co., Dearborn, Mich.) and B. L. Capehart (Florida, University, Orlando, Fla.) *IEEE Transactions on Aerospace and Electronic Systems*, vol. AES-8, Jan 1972, p. 19-26. 5 refs.

The search process of an airborne laser seeker system is studied to maximize the probability of target acquisition with respect to the following parameters: altitude, velocity, seeker scan angle, seeker depression angle, laser illuminator peak power, scan pattern, and acceptance logic. The relationships between the objective variable and the first five parameters are established through a regression analysis of data points collected from a computerized system model. Classical techniques applied to the regression equation isolate a local maximum. Scan pattern and acceptance logic are each studied

separately since their optima are independent of the other parameters of the system. Maximum probability of target acquisition is nearly unity. (Author)

A72 24725 # Minimum operational characteristics for airborne VHF omnirange (VOR) systems. Washington, D.C., Radio Technical Commission for Aeronautics (Document No. DO 149) Jan 14, 1972. 30 p. 11 refs. \$6.00.

Demonstration of the need for minimum operational characteristics for airborne systems, and recommendation of minimum operational characteristics for airborne VOR systems. The need for basic characteristics for navigation and communication systems used in air traffic control is cited, minimum operational characteristics of the airborne system elements are suggested, and the preparation of minimum operational characteristics for airborne systems is discussed. Minimum operational characteristics for airborne VOR

A72 24756 International Symposium on Electro-Magnetic Suspension, 2nd, University of Southampton, Southampton, England, July 12-14, 1971. Proceedings. Southampton, England, University of Southampton, 1971. 343 p.

Topics discussed include the use of superconductivity in magnetic suspension design, losses in superconducting magnets, an automatic suspension using tuned LCR circuits, an electromagnetic model position sensing system for wind tunnels, electrooptical detectors for magnetic suspension, an optical scanning detection system for low density drag measurements, data acquisition and reduction for a superconducting magnetic suspension and balance facility, a dc power supply for a magnetic suspension system, wind tunnel tests of conical and winged model configurations using a magnetic suspension and balance system, the use of an electromagnetic balance in rarefied gas research, an electromagnetic position sensor for a magnetically supported model, and the simulation of gravity in wind tunnels with the aid of magnetic fields.

A72-24757 * # The University of Virginia superconducting magnetic suspension and balance facility. R. N. Zapata (Virginia University, Charlottesville, Va.) In *International Symposium on Electro-Magnetic Suspension*, 2nd, University of Southampton, Southampton, England, July 12-14, 1971. Proceedings.

Southampton, England, University of Southampton 1971. p. A 1 A 22. Discussion p. A 23 A 24. 9 refs. Grants No. NGR 47 005 029. No. NGR 47 005 110. No. NGR 47 005 112.

Description of a prototype facility comprising a superconducting magnetic suspension and balance and a supersonic wind tunnel. This facility was developed with the objectives of establishing the feasibility of applying the three-component magnetic balance concept to dynamic stability studies, and investigating design concepts and parameters that are critical for extrapolation to large scale systems. Many important design and operational aspects, as well as safety considerations, are dictated by the cryogenic nature of this advanced technology facility. Results of initial tests demonstrate that superconductors can be utilized safely and efficiently for wind tunnel magnetic suspensions. At the present stage of development of this facility, controlled one-dimensional support of a spherical model has been achieved. (Author)

A72 24759 # The use of superconductivity in magnetic balance design. F. E. Moss (Virginia, University, Charlottesville, Va.) In *International Symposium on Electro-Magnetic Suspension*, 2nd, University of Southampton, Southampton, England, July 12-14, 1971. Proceedings. Southampton, England, Uni

versity of Southampton, 1971 p C 1 C 15 15 refs

Summary of the magnetic field and field gradient requirements for magnetic suspension in a Mach 3, 6 in diam wind tunnel, along with the power requirements for gradient coil pairs wound of copper operating at room temperature and aluminum cooled to 20 K. The power dissipated is large enough so that the use of superconductivity in the coil design becomes an attractive alternative. The problems of stability and ac losses are outlined along with the properties of stabilized superconductors. A brief review of a simplified version of Bean's (1964) critical state model is presented, and the problems involved in calculations of the ac losses in superconducting coils are outlined. A summary of ac loss data taken at Brookhaven National Laboratories (BNL) on pancake coils wound of commercially available Nb₃Sn partially stabilized tape is presented and shown as leading to the University of Virginia gradient coil design. The actual coil performance is compared with predictions based on the BNL results. Finally, some remarks are presented concerning scaling of the ac losses to larger magnetic suspension systems as well as prospects for improved performance using newer multifilament superconductors (Author)

A72-24765 # Determination of forces and moments with a magnetic wind tunnel balance system G D Gilliam (MIT, Cambridge, Mass.) In International Symposium on Electro Magnetic Suspension, 2nd, University of Southampton, Southampton, England, July 12-14, 1971, Proceedings Southampton, England, University of Southampton, 1971, p J 1 J 17, Discussion, p J 18

The aerodynamic forces and moments experienced by a model in a wind tunnel may be deduced from the magnetic forces and moments required to balance them. The derivation of the equations presently used to determine the forces and moments exerted on a body by the magnetic fields produced by the MIT NASA Prototype Magnetic Balance is presented. In addition, a procedure for determining the parameter in the equations for a particular model is outlined (Author)

A72-24766 * # Data acquisition and reduction for the U Va superconducting magnetic suspension and balance facility I D Jacobson, J L Junkins, and J R Jancaitis (Virginia, University, Charlottesville, Va.) In International Symposium on Electro-Magnetic Suspension, 2nd, University of Southampton, Southampton, England, July 12-14, 1971, Proceedings

Southampton, England, University of Southampton, 1971, p K 1-K 12 Discussion, p K 13, K 14 9 refs Grants No NGR 47 005 029, No NGR-47 005-149, No NGR-47 005-112

The problems associated with data acquisition and reduction in the University of Virginia superconducting magnetic suspension and balance facility are similar to those in free flight ranges (or tunnels). The model undergoes a 'Quasi six-degree of freedom' motion which must be monitored both in position and angular orientation from which the aerodynamics must be inferred. The data acquisition problem is made more difficult because geometric constraints prevent direct visual access to the model in the Mach 3 wind tunnel. The methods, accuracies and problems associated with the acquisition of data are discussed (Author)

A72-24769 # Aerodynamic characteristics of axisymmetric and winged model configurations using a magnetic suspension and balance system M Vlainac (MIT, Cambridge, Mass.) In International Symposium on Electro Magnetic Suspension, 2nd, University of Southampton, Southampton, England, July 12-14, 1971, Proceedings Southampton, England, University of Southampton, 1971, p N 1 N 12, Discussion, p N 13 11 refs

Results of subsonic and supersonic wind tunnel tests with a magnetic balance and suspension system on a family of bulbous based cone models are presented. At subsonic speeds the base flow

and separation characteristic of these models is shown to produce anomalous behavior of the static force and moment coefficients with angle of attack. Comparison of data obtained with a dummy sting is made with support interference free results. The static aerodynamic characteristics of three sharp edged, slender wings at subsonic speeds is presented. Comparison of the present results with tests at Reynolds numbers an order of magnitude higher is considered good, thereby validating the small scale tests (Author)

A72-24770 # Aerodynamic data acquisition with the University of Southampton magnetic balance S Abdel Kawi, T Diab, M J Goodyer, R I Henderson, and M Judd (Southampton, University, Southampton, England) In International Symposium on Electro Magnetic Suspension, 2nd, University of Southampton, Southampton, England, July 12-14, 1971, Proceedings

Southampton, England, University of Southampton, 1971, p O 1 O 17, Discussion, p O 18 O 19 11 refs Research supported by the Ministry of Aviation Supply and Ministry of Defence

A brief description of the Southampton magnetic balance is presented first with particular emphasis on the methods for extracting steady and unsteady wind tunnel data. New acquisition and analysis methods are then described. Steady lift, drag and pitching moment measurements have been made on a body of revolution and on wing body combinations of delta and AGARD G wing planform. Roll damping for the wing body combination is also presented (Author)

A72-24771 # Research in rarefied gas dynamics using an electromagnetic wind tunnel balance R N Zapata, A R Kuhlthau, and S S Fisher (Virginia, University, Charlottesville, Va.) In International Symposium on Electro-Magnetic Suspension, 2nd, University of Southampton, Southampton, England, July 12-14, 1971, Proceedings Southampton, England, University of Southampton, 1971, p P 1 P 16, Discussion, p P 17, P 18 6 refs Grant No AF AFOSR 69 1798

Aerodynamic forces on spheres and slender cones in hypersonic, low density flows have been measured with a 3 component magnetic balance of improved capabilities. Advances in the experimental techniques permitting measurements of increased accuracy, precision, and resolution have made possible interesting studies of slender cone aerodynamics. Preliminary results of an investigation of sting effects are reported. Current and future research plans are discussed from the point of view of facility development (Author)

A72-24773 # Electromagnetic position sensor for a magnetically supported model in a wind tunnel W R Towler (Virginia University, Charlottesville, Va.) In International Symposium on Electro Magnetic Suspension, 2nd, University of Southampton, Southampton, England, July 12-14, 1971, Proceedings

Southampton, England, University of Southampton, 1971, p Q 4 Q 7 Discussion, p Q 8

Description of the design, principle of operation, and performance characteristics and problems of an electromagnetic position sensor for a magnetically supported model in a wind tunnel. The sensor is based upon the principle of a differential transformer, and it is hoped that the problems encountered in its operation will be solved eventually. M V E

Investigation of the feasibility of a magnetically simulated gravity that could make it possible to simulate aircraft jettison processes in a wind tunnel It is shown that coils capable to produce a thereto suitable magnetic field configuration do exist Circumstances are defined for which multiple jettison releases may be simulated, and an approximate calculation for the errors due to magnetic field nonuniformities is presented M V E

A72-24776 * # The use of iron and extended applications of the U Va cold balance wind tunnel system H M Parker and J R Jancaitis (Virginia, University, Charlottesville, Va) In International Symposium on Electro-Magnetic Suspension, 2nd, University of Southampton, Southampton, England, July 12-14, 1971, Proceedings Southampton, England, University of Southampton, 1971, p S 1-S 10 Grants No NGR-47 005-029, No NGR-47-005-112

Consideration of the possibility of extending the use of a cold magnetic balance wind tunnel system to non-continuously spinning aircraft configurations and to subsonic flow regimes The problems involved in these extensions are discussed The possible use of iron for the magnetic support element, or some material reasonable equivalent, is found to be crucial The existing theoretical evidence that iron may be used without penalty is summarized (Author)

A72-24842 A method for reducing the base drag of wings with blunt trailing edge M Tanner (Aerodynamische Versuchsanstalt, Gottingen, West Germany) *Aeronautical Quarterly*, vol 23, Feb 1972, p 15-23 10 refs

To study the possibilities of reducing the base drag of profiles with a blunt trailing edge, experiments were performed in two low-speed wind-tunnels at the DFVLR-AVA, Gottingen (some on models between walls and some on rectangular wings with an aspect ratio of 2.5) The results show that the mean base pressure can be increased, and so the base drag reduced, by using a special form of the blunt trailing edge The variation of local base pressure along the span, and the way in which this variation is influenced by the form of the trailing edge, is also shown Some results for the total drag and lift are also indicated (Author)

A72-24844 Some stability problems of ground effect wing vehicles in forward motion P E Kumar (Hawker Siddeley Aviation, Ltd, Hatfield, Herts, England) *Aeronautical Quarterly*, vol 23, Feb 1972, p 41-52 11 refs Research supported by the Ministry of Technology

Recent advances in the development of ground cushion vehicles have indicated the need for a more efficient means of providing lift at the higher speeds envisaged in the future A wing operating in ground effect could provide this lift and might be far more attractive economically than the 'hovercraft' This note investigates some of the stability aspects of such a ground effect wing vehicle, using linear analysis, by developing the relevant equations of motion and examining the characteristic equations using quasi-steady derivatives, at fixed heights, obtained from wind tunnel tests In addition, comparison is made between an analogue simulation and the flight paths obtained from a free flight model This investigation showed that the longitudinal mode of oscillation for both single and tandem wings with endplates was unstable and artificial stability was necessary The lateral mode of oscillation for a single wing was stable in both roll and yaw, the latter being subject to fin and endplate configurations (Author)

A72-24845 Aerodynamic throttling of two-dimensional nozzle flows R H Nunn (US Naval Postgraduate School,

Monterey, Calif) and H Brandt (California, University, Davis, Calif) *Aeronautical Quarterly*, vol 23, Feb 1972, p 53-61 6 refs

The inviscid interaction resulting from the penetration of a jet of air into the throat region of a bounded mainstream flow is investigated analytically and experimentally Taking into account the effects of jet shocks, a control volume analysis is used to calculate the mainstream and jet conditions at the boundaries of the interaction region These results are then used to estimate the shape of the interface separating the jet and mainstream Particular attention is given to the throttling of the mainstream flow and the analytical predictions show agreement with the experimental measurements (Author)

A72-24846 Lower bounds for the pressure jumps of the shock waves of a supersonic transport of given length L B Jones (Bradford, University, Bradford, England) *Aeronautical Quarterly*, vol 23, Feb 1972, p 62-76 14 refs

In an earlier paper the lower bounds for the pressure jumps across the bow shock waves of a supersonic transport were derived, it being assumed that all the shocks had coalesced into either the bow or rear shocks, but not that the shocks were at such a great distance (asymptotic) that they had the same strength In this paper the results of the earlier work are developed so that the lower bounds for the pressure jumps across shock waves propagating through a homogeneous atmosphere are determined by considering bow and rear shock waves simultaneously (Author)

A72-24854 Subsonic unsteady aerodynamic pressures on compressor blades (Pressions aerodynamiques instationnaires subsoniques sur les ailettes de compresseurs) J Leclerc and P Salaun (ONERA, Châtillon sous Bagneux, Hauts-de-Seine, France) *Académie des Sciences (Paris), Comptes Rendus, Série A - Sciences Mathématiques*, vol 274, no 10, Mar 6, 1972, p 863-866 In French

Solution of the problem of determining the aerodynamic pressures acting on the blades of a compressor wheel freely rotating in an air stream As in wing theory, the blades are replaced by a distribution of pressure doublets, which requires the determination of the potential due to N isolated sources regularly distributed in a circle on each blade The problem of calculating the aerodynamic pressures is reduced to the solution of an integral equation the kernel of which is decomposed into a double series of products of functions of a single variable A B K

A72-24864 # Creation and dissemination by computer of electrical interface information in avionics systems D C J Garrett and R A Bolton (E A Space and Advanced Military Systems, Ltd, Frimley, Camberley, Surrey, England) *Aircraft Engineering*, vol 44, Mar 1972, p 4-6

Application of a computer to the solution of a communication problem in avionics systems The problem involves the creation of a document which defines all the electrical interface connections in the system, and the dissemination of the design information contained in the document to all the project participants on a regular basis A computer program (EMPRENT) which has the ability to select and sort designated data is described F R L

A72-24865 # A common design approach to STOL and V/STOL transport aircraft T K Szlenkier (Hawker Siddeley Aviation, Ltd, Kingston upon Thames, Surrey, England) *Aircraft Engineering*, vol 44, Mar 1972, p 10-15 5 refs

Discussion of the fan lift solution to STOL and V/STOL requirements, which is based on the use of common propulsion and lift engine types for both applications Such an approach gives substantial advantages in that the technology is applicable to either regime of operation or in that there can be an evolutionary

development through STOL to VTOL Comparative assessments indicate that fan lift aircraft are superior to the best alternative STOL and VTOL designs F R L

government organizations, airworthiness authorities, subcontractors, financial institutions, marketing agencies, and customers are examined V P

A72-24866 # The non synchronous techniques Aircraft Engineering, vol 44, Mar 1972, p 16-19

Description of the RCA SECANT (separation and control of aircraft using nonsynchronous techniques) method of collision avoidance It is a cooperative transponding system which operates at L band, and performs the collision avoidance function by transmitting probes and receiving replies with a 1 microsec pulse, at 1000 pulses/sec, on 24 different frequencies Various discriminants are used to eliminate the undesired signals Different frequencies are allocated as a function of altitude of the flight of the aircraft The fields above and below the aircraft are probed separately, and analog thresholds are established based on the range required for the collision avoidance function, which discriminate against signals coming from aircraft too far away to be involved F R L

A72 24922 # Statistical assessment of the linear fatigue damage increment of a welded airframe component V Nejedly Zprava VZLU, Jan 1972, p 1-14 15 refs

A contribution is presented to the objective statistical evaluation of experimental data resulting from fatigue tests of aircraft structural parts under constant force amplitude conditions Two methods for determining the fatigue damage increment during cyclic loading with a constant force amplitude are described and compared At the same time, the effect of the form of the loading cycle on the component fatigue life is investigated Finally, a critical discussion of the results is presented, taking into account the effect of the life scatter with respect to the evidence of safe fatigue life O H

A72 24867 # Planning and operational aspects of 'on condition' philosophies F S Nowlan (United Air Lines, Inc., Chicago, Ill.) Aircraft Engineering, vol 44, Mar 1972, p 26 28

Review of the practices of United Air Lines in identifying and continuing those scheduled maintenance activities which are effective in protecting reliability characteristics, and identifying and discontinuing those activities which are ineffective Turbine engine reliability, component reliability, reliability controlled overhaul, and test and repair as necessary programs are outlined Attention is given to system and component operating performance evaluation F R L

A72-24923 # Maneuverability of jet helicopters (Manovrabilità dei velivoli a reazione) A Malfertainer Rivista Aeronautica, vol 47, Dec 1971, p 2083-2106 In Italian

Review of the factors affecting the maneuverability of jet helicopters during the main types of maneuvers It is shown that the maneuverability of a jet helicopter does not depend only on the flight characteristics of the helicopter and the capacity of the pilot, but also on other factors, such as the flight configuration and the flight altitude, and, to a considerable extent, also on the load factor Attention is called to the phenomenon of false altitude readings of the altimeter, especially during diving or rapid climbing A B K

A72 24877 Contributions of the Bell Helicopter Company to helicopter development /12th Cierva Memorial Lecture/ B Kelley (Bell Helicopter Co., Fort Worth, Tex.) Aeronautical Journal, vol 76, Mar 1972, p 157 165

The Bell lifting rotor systems and the principal contributions in the fields of electronics and avionics are examined, with particular reference to the development and constant improvement of the two bladed motor and to research work on the prop-rotor Solutions to the rotor vibration problem are examined The history of the Bell Helicopter Company, starting with 1941, is reviewed, together with policies concerning the development of new ideas, and the research and development projects V P

A72-24940 The role of surface acoustic wave technology in communication systems J H Collins and P M Grant (Edinburgh, University, Edinburgh, Scotland) Ultrasonics, vol 10, Mar 1972, p 59-71 23 refs Research supported by the Science Research Council

A survey is presented of the principles, parameter values, and classes of the analog matched filters (AMF's) and their tradeoffs with digital matched filters when viewed in the context of future systems applications For illustrative purposes, the role of AMF's is identified in M-ary, frequency hopped, and direct sequence spread spectrum modems, a continuous multiple access communication system, navigation systems, a time division multiple access air traffic control system and, finally, in a high traffic density, large spatial volume, aircraft collision avoidance system O H

A72-24881 Legal aspects of international co-operation on aircraft design and production W B Jenkins (British Aircraft Corp., Ltd., Commercial Aircraft Div., Weybridge, Surrey, England) Aeronautical Journal, vol 76, Mar 1972, p 188-191

The legal framework within which an international cooperative project can be established is related in this study with matters arising from the relationship of parties to an international collaborative project which requires regulation, such as work sharing and adjustment thereto, management of the project, sharing of liabilities, proprietary rights, and joint insurances The different types of legal organization appropriate for the management of international aircraft projects are examined V P

A72 25023 High resolution observations of the sub-millimetre stratospheric emission spectrum J E Harries, N R W Swann (Department of Trade and Industry, National Physical Laboratory, Teddington, Middx., England), J E Beckman, and P A R Ade (Queen Mary College, London, England) Nature, vol 236, Mar 24, 1972, p 159-161 20 refs

Preliminary results of some recent (Nov 11, 1971) measurements of the thermal emission spectrum of the stratosphere in the submillimeter region obtained at 12-km altitude by instruments mounted on board a Comet 2E experimental aircraft In this case an improvement in resolution was achieved by using a helium cooled InSb electron bolometer instead of a Golay cell detector used in previous experiments In addition to the lines of H₂O, O₂, and O₃ previously observed, evidence is obtained which strongly suggests the presence of emission from HNO₃ A B K

A72-24882 Co-operation between the parties to the project itself and third parties C B White (Hawker Siddeley Group, Ltd., London, England) Aeronautical Journal, vol 76, Mar 1972, p 192-194

Problems arising between collaborating parties and outsiders are discussed The aspects of collaborating relations with governments,

A72-25070 # The trailing vortex wake downwind of an external flow jet flap R H Wickens (National Aeronautical Establishment, Ottawa, Canada) Canadian Aeronautics and Space

Journal, vol 18, Mar 1972, p 67, 68

Discussion of experiments in which the physical nature of the trailing vortex wake downward of an external flow jet flap was studied by having a five hole probe make traverses through the flow. Diagrams are given to show the spanwise distribution of sidewash angle and dynamic pressure. A diagram of sidewash, downwash and propulsive contours downstream of the wing is also included. Smoke flow visualization was used to observe the rolled-up vortices characterizing the trailing jet sheet. V Z

A72-25078 # Operational aviation meteorological requirements, present and future N A Lieurance (NOAA, Washington, DC) In *Symposium on Meteorological Observations and Instrumentation*, 2nd, San Diego, Calif., March 27-30, 1972, Preprints Boston, American Meteorological Society, 1972, p 32-36. 8 refs

Operational requirements for meteorological information in aviation are dictated by categories of aircraft, types of users, and varied aircraft avionics and navigational aids. The wide spectrum of users is categorized (including the air traffic control system), and individual requirements are reviewed. Type of information desired and length of forecast periods are summarized, including specifications of new instrumentation that must be developed to meet projected needs. T M

A72-25079 # Real-time pilot reports utilizing data-link communications P W Kadlec (Continental Air Lines, Inc., Los Angeles, Calif.) In *Symposium on Meteorological Observations and Instrumentation*, 2nd, San Diego, Calif., March 27-30, 1972, Preprints Boston, American Meteorological Society, 1972, p 37-39

Transmission of air-ground and ground-to-air messages by a digital data link is explained in terms of encoding and processing equipment employed in recently developed systems. Typical message formats are illustrated, and the significance of meteorological codes employed is outlined. Future developments leading to the dissemination of automatic real time weather forecasts are discussed. T M

A72-25093 # General examination of problems set by meteorological instrumentation on airports (Examen général des problèmes posés par l'instrumentation météorologique sur les aéro-dromes) H P Treussart (Météorologie Nationale, Trappes, Yvelines, France) In *Symposium on Meteorological Observations and Instrumentation*, 2nd, San Diego, Calif., March 27-30, 1972, Preprints Boston, American Meteorological Society, 1972, p 217-222. In French

Discussion of elements influencing the development of meteorological instrumentation, and of the evolution of detectors. Meteorological instrumentation has been strongly influenced by the rapid development of electronics, and particularly by the wide availability of transistorized or integrated devices of high reliability. Ground wind measurement detectors, and detectors for measurement of visibility, cloud base height, air temperature, and humidity are briefly considered. Attention is given to meteorological radar and data processing. F R L

A72-25096 # Forecasting the needs of the 80's L L LeBlanc (USAF, Offutt AFB, Neb.) In *Symposium on Meteorological Observations and Instrumentation*, 2nd, San Diego, Calif., March 27-30, 1972, Preprints Boston, American Meteorological Society, 1972, p 236-241

Factors expected to dominate military weather support procedures during the present decade are identified as the centraliza-

tion of the decision making process, the development of more effective data processing techniques and an increase in the quality and quantity of satellite data. A system producing mission tailored forecasts, a terminal forecast model, a selective display mode, and a computer flight planning model are discussed as major anticipated developments in the field. V Z

A72-25107 Mitsubishi XT-2 - Japan's new jet trainer (Mitsubishi XT-2 Japans neuer Strahltrainer) H Brenner *Flug Revue/Flugwelt International*, Apr 1972, p 20-24. In German

In September 1967 the Japanese aerospace company Mitsubishi was named prime contractor of the XT-2. Basic design studies were completed during 1968. Two prototypes of the new aircraft were built. The first flight was made on July 20, 1971. It is intended to use the XT-2 also as a replacement for the F-86F for ground support missions. Tentative plans call for the eventual purchase of 130 aircraft for ground support duties and of 80 aircraft for training purposes. G R

A72-25108 Optimization of aircraft maintenance (Optimierung der Instandhaltung von Fluggerat) K Harling and K Schurger (Deutsche Lufthansa AG, Hamburg, West Germany) *Flug Revue/Flugwelt International*, Apr 1972, p 27-31. In German

The factors which have to be considered in the optimization include objectives of safety and reliability, punctuality, and the performance of the required maintenance functions at costs which are as low as possible. The development of maintenance systems is discussed together with the accepted maintenance principles. The maintenance system for the propulsion units of the aircraft of the German Lufthansa is considered as an example for the practical application of the theory of aircraft maintenance. G R

A72-25118 # Supersonic flow around an antisymmetrical thin cruciform wing which has a horizontal plane with supersonic leading edges, taking into account flow separation at the edges (Scurgereea supersonica in jurul aripii cruciforme subtiri antisimetrice avind planul orizontal cu bordurile de atac supersonice, considerind separatia de curent la borduri) S Staicu (Bucuresti, Institutul Politehnic Gheorghe Gheorghiu Dej, Bucharest, Rumania) *Bucuresti, Institutul Politehnic Gheorghe Gheorghiu Dej, Buletinul*, vol 33, Jan-Feb 1971, p 103-118. 10 refs. In Rumanian

Study of supersonic flow around a thin cruciform wing which has an antisymmetrical angle of attack distribution and a horizontal plane with supersonic leading edges, taking into account flow separation along the supersonic leading edges of the vertical plane. Proceeding as in the case of a cruciform wing with all edges subsonic, it is assumed that a real thin cruciform wing is equivalent from the aerodynamic standpoint to a fictitious thin wing with a suitable angle of attack variation. This fictitious wing is then divided into three component wings which are studied by the method of conical flows, and the axial perturbation velocities of these three component wings are determined. A B K

A72-25120 # The velocity field in the three-dimensional boundary layer formed on the walls of axial-flow turbomachines (Cimpul de viteze in stratul limita tridimensional format pe peretii turbomasinilor axiale) C Guta (Bucuresti, Institutul Politehnic Gheorghe Gheorghiu Dej, Bucharest, Rumania) *Bucuresti, Institutul Politehnic Gheorghe Gheorghiu Dej, Buletinul*, vol 33, Mar-Apr 1971, p 49-58. 7 refs. In Rumanian

Derivation of the equations of motion of a steady viscous fluid flow in the three-dimensional boundary layer on the walls of axial flow compressors and turbines. The laws of variation of the velocity components are derived in a first approximation as a function of the boundary layer thickness. The effect of the velocity

field twist angle on the investigated parameters is ascertained by applying d'Alembert's principle to an elementary volume of fluid moving in the boundary layer A B K

A72-25122 **Flow technology and fluid-flow machines (Stromungstechnik-Stromungsmaschinen)** E Windemuth (Ingenieur fachhochschule des Heeres, Darmstadt, West Germany) Munich, R Oldenbourg Verlag, 1971 302 p 61 refs In German Price, US dollars 7 70

The principles of operation and the principal problems of fluid flow engines and systems are outlined in a systematic manner. Complex theoretical relationships and mathematical derivations are intentionally omitted to focus the attention of the reader on the basic problems. Discussions of individual machines include design examples which demonstrate the problems involved and means of solving them. The fundamentals of fluid dynamics are outlined, making use of application examples to provide a clearer understanding. The principles of fluid mechanics are reviewed in concise form V P

A72-25128 # **Contribution to the theory of power plants employing gas-liquid mixtures (K teorii gazozhidkostnykh energodvi zhitel'nykh ustanovok)** I M Chernyi, N A Prihod'ko, and Iu G Mokeev (Akademiia Nauk Ukrainsoi SSR, Institut Gidromekhaniki, Kiev, Ukrainian SSR) *Gidromekhanika*, no 19, 1971, p 15 24 9 refs In Russian

The hydrothermodynamic foundations of the theory of hydrofoil vessel engines running on gas water mixtures and employing a gas turbine as the gas generator are outlined. The relations obtained are used to analyze the thrust coefficient with allowance for the principal engine losses. It is shown that efficiency is a complex function of numerous parameters and their combinations V P

A72-25129 # **Investigation of hydrodynamic forces in the sinusoidal vibrations of a disk (Issledovanie gidrodinamicheskikh sil pri sinusoidal'nykh kolebaniakh diska)** G V Logvinovich and Iu N Savchenko (Akademiia Nauk Ukrainsoi SSR, Institut Gidromekhaniki, Kiev, Ukrainian SSR) *Gidromekhanika*, no 19, 1971, p 24 28 In Russian

Experiments are described in which the reciprocating sinusoidal large amplitude vibrations of a disk in a water channel were studied to determine the hydromechanics of the formation of hydrodynamic forces and to apply the results to the mechanics of a flapping wing. Flow visualization techniques revealed a wake pattern characterized by toroidal vorticity. Empirical formulas for calculating the maximum force and required power for large amplitudes are proposed V P

A72-25131 # **Calculation of the flow past a small-aspect-ratio delta wing from the viewpoint of slender body theory (Raschet obtekaniiia del'ta-kryla malogo udlineniia s pozitsii teorii tonkogo tela)** R A Soroka (Akademiia Nauk Ukrainsoi SSR, Institut Gidromekhaniki, Kiev, Ukrainian SSR) *Gidromekhanika*, no 19, 1971, p 44-47 6 refs In Russian

The integral equation of a small-aspect-ratio delta wing with a straight trailing edge is derived under the assumption that the lifting vortices are distributed along rays running from the apex of the wing. A method of obtaining solutions in series form is proposed. It is shown that in the limiting case, the solutions correlate well Jones' (1946) theory V P

A72-25136 # **Semibounded laminar jet of an incompressible fluid on a moving plate (Poluogranichennaia laminarnaia struia**

neszhimaemoi zhidkosti na dvizhushcheisia plastine) R A Antoniuk (Kievskii Institut Inzhenerov Grazhdanskoi Aviatsii, Kiev, Ukrainian SSR) *Gidromekhanika*, no 19, 1971, p 76-79 In Russian

The propagation of a plane laminar semibounded incompressible fluid jet expelled from a slot into a slipstream along a plate moving in the same direction and at the same velocity as the slipstream is analyzed. The system of boundary layer equations of the problem is solved under the assumption that the velocity of the jet at the nozzle exit differs only slightly from that of the slipstream V P

A72-25137 # **Test stand for studying the effectiveness of rain protection by blowing (Eksperimental'nyi stand dlia issledovaniia effektivnosti struinoi zashchity ot dozhdia)** A M Mkhitarian, P S Lazniuk, and L P Goliakov (Kievskii Institut Inzhenerov Grazhdanskoi Aviatsii, Kiev, Ukrainian SSR) *Gidromekhanika*, no 19, 1971, p 112 115 In Russian

A wind-tunnel facility capable of producing artificial rain with the required droplet size and velocity is described. The facility is used to study the effectiveness of turbulent jets in the protection of such aircraft surfaces as radomes and cabin windows from rain of various intensity. A technique for measuring the dimension of rain droplets with a stroboscope and photocamera is described. The parameters of the test stand are chosen to simulate external flow conditions during takeoff and landing V P

A72-25146 **Identification and adaptive control - An application to flight control systems** A V Balakrishnan (California, University, Los Angeles, Calif.) *Journal of Optimization Theory and Applications*, vol 9, Mar 1972, p 187 213 7 refs

This paper presents the first results obtained in the application of stochastic control theory to flight control problems. It involves identification and adaptive control of an aircraft which operates over a wide range of environmental conditions that affect its dynamic characteristics. The bulk of the paper deals with the identification problem of estimating stability derivatives in the presence of turbulence. Simulation results are presented both for identification and control (windgust alleviation and desired response to pilot input). While no practical implementation is reported, the implications for such implementation appear to be promising (Author)

LARGE-SCALE WIND-TUNNEL INVESTIGATION OF A V/STOL TRANSPORT MODEL WITH PODDED LIFT FANS FORWARD AND AFT OF A LOW MOUNTED WING
Leo P Hall and Jerry V Kirk Feb 1971 60 p refs
(NASA-TM-X-62102) Avail NTIS CSCL 01A

A configuration with outboard pod mounted front fans and rear fans located in the wing trailing-edge and fuselage juncture might have superior induced lift and variation of moment with airspeed. A large scale investigation of this type of configuration was conducted in 40- by 80-foot wind tunnel. The model used was a low wing transport representative of currently operating aircraft. Two lift fans were placed in pods forward of and below the wing with the fan centerline near mid semi-span. Two rear fans were mounted at the wing trailing-edge close to the fuselage with the fan rotor in the wing chord plane. Fan performance was measured statically and with forward speed and longitudinal aerodynamic characteristics were obtained with the fans operating at various tip-speed ratios. Author

SPLITTING SUPERSONIC NOZZLE FLOW INTO SEPARATE JETS BY OVEREXPANSION INTO A MULTILOBED DIVERGENT NOZZLE
Ronald G Huff and Donald E Groesbeck Washington Mar 1972 55 p refs
(NASA-TN-D-6667 E-6640) Avail NTIS CSCL 20D

Air flowing from a convergent nozzle at pressure ratios greater than 2.5 has been split into eight separate jets by overexpansion of the flow into a divergent eight-lobed passage. The splitting of the flow is accompanied by a decrease in the nozzle axial centerline Mach number. This in part is due to the radial inflow of secondary air between the lobes toward the nozzle centerline. Each of the smaller jets is partially split after it leaves the end of the divergent lobed section of the nozzle, thus creating a velocity profile having 16 peaks. At a pressure ratio of 3.5 the flow decelerates to Mach 1 in three convergent nozzle throat diameters. Convergent nozzle flow normally requires 12 diameters to reach Mach 1. The nozzle has a sound attenuation of 12 decibels with a thrust loss of 9 percent for the best configuration tested. Author

A SURVEY OF TEN YEARS OF NLR ACTIVITIES ON RINGWING-BODY CONFIGURATIONS, 1956-1966

S F Erdmann and P J Zandbergen [1967] 84 p refs
(NLR-TR-69070-U) Avail NTIS

A survey is given of ten years of activities in designing and testing low drag ringwing-body combinations. Theoretical work is discussed based on the linearized theory as well as on the more exact theory and their implications for the design of an optimum ringwing-body combination. A number of interesting investigations on the effects of base drag, boundary layer displacement thickness and lift are also considered. Measurements on a stylized configuration demonstrate that at low velocities the wing only begins to stall at 20 deg incidence and that in the transonic region the blockage phenomena between body and wing are in approximate agreement with those to be expected from the application of one-dimensional theory. The results of the experimental investigation of the behavior under off-design conditions, i.e. Mach number and incidence differing from their design values, indicate that a pronounced minimum exists at design conditions. COMPUTATION OF CAPTIVE FLIGHT LOADS ON AIR CARRIED WEAPONS

J W Onstott and W J Werback Sep 1971 103 p refs
(AD-733673 NWC-TP-5235) Avail NTIS CSCL 01/3

A computer program for calculating airborne store loads shears and moments is described. Three hanger configurations can be treated: two lugs and four sway braces, a statically determinate two-hanger rail-launch, two T-lugs with no sway braces. The program automatically calculates lug and sway brace reactions. Shear and moment distributions are plotted and tabulated for the vertical, lateral and resultant loads. Expanded capabilities of this program also permit determination of the effect of varying cant orientation angles of the store with the same bomb rack geometry. A new feature is a quick-look calculation using a standard set of load factors from the captive flight, catapult takeoff and arrested landing load factor curves. Author (GRA)

(Grant AF-AFOSR-1234-67 AF Proj 9782-01)

(AD-733370 AFOSR-71-2895TR) Avail NTIS CSCL 01/3

A combined theoretical and experimental research program has been carried out over the past four years to establish preliminary design criteria for estimating the aeroelastic stability and forced-response characteristics of thin-walled circular cylindrical shell structures. As a result of this study several basic observations were made concerning the degree of sophistication required in the aerodynamic and structural modeling of this aeroelastic problem. It was found for example that small details in the description of the structural boundary conditions can strongly influence the aeroelastic stability of the shell. The most significant structural boundary condition effect was observed when the shell geometry and loading conditions were such that the edge disturbances were propagated well into the interior of the shell. On the other hand when conditions were such that these edge disturbances were confined to a small boundary layer region near the ends of the shell no significant edge effects were noticed on the overall shell aeroelastic stability. Small initial deviations of the shell's surface from its idealized shape were also shown to drastically reduce its resistance to panel flutter even though the deviations were only on the order of one shell thickness. Panel flutter instabilities in the presence of a laminar boundary layer profile were also found to be much less destructive to the shell than those originating in the presence of a turbulent profile. CSCL 20/4

The system investigated is comprised of two elements whose shape and relative position create a beneficial interference effect similar to that achieved by swept wings. The particular geometry of the Compound System is investigated for the capability of recovering loss in L/D resulting from the airfoil thickness without the favorable interference effect. Although the basic concept was conceived in terms of triangular shaped airfoils with interfering shock waves which interacted with the airfoil boundary layers, the information derived from this simplified analysis has been utilized to derive airfoil shapes to accomplish the desired effect without undesirable shock boundary layer interactions. A flight investigation to determine the operational feasibility of two-segment approaches as a means for reducing airport community noise has been conducted. The effective perceived noise level (EPNL) associated with these approach profiles using a 720-023B jet aircraft has been obtained. The tests were designed to determine an operationally optimum approach profile and to quantify the reduction in noise level at predetermined locations on the ground beneath the flight track. The acoustic aspects of the test program are examined. An analysis of the optimum and reference profiles was made using a group of pilots. Information was also obtained on the types of pilot operational procedures used for the optimum profile. Author

AIRCRAFT INCIDENT REPORT NORTHEAST AIRLINES, INCORPORATED MCDONNELL DOUGLAS DC-9-31 N982NE, MARTHA S VINEYARD, MASSACHUSETTS, 22 JUNE 1971

29 Dec 1971 18 p

(NTSB-AAR-72-4) Avail NTIS

On June 22 1971 a DC-9-31 aircraft struck the water during a nonprecision instrument approach and received minor damage. There were no injuries to the three passengers and five crewmembers aboard the aircraft. The flight was performing a VOR straight-in approach to Runway 24 at Martha's Vineyard at the time of the incident. The aircraft struck the water approximately 3 miles short of the runway. Minor structural damage was incurred by the lower aft section of both engines. The probable cause of this incident was the lack of crew coordination in monitoring the altitude during the performance of a nonprecision instrument approach, the misreading of the altimeter by the captain and a lack of altitude awareness on the part of both pilots. EXPLORATORY FLIGHT INVESTIGATION OF AIRCRAFT RESPONSE TO THE WING VORTEX WAKE GENERATED BY JET TRANSPORT AIRCRAFT

William H Andrews Glenn H Robinson and Richard R Larson Washington Mar 1972 32 p

(NASA-TN-D-6655 H-671) Avail NTIS CSCL 01B

The effect of intercepting wing tip vortices generated by large jet transports including jumbo jets over separation distances from 1 nautical mile to 15 nautical miles is evaluated on the basis of the response of a vortex probe airplane in the roll mode. The vortex probe test aircraft included a representative general aviation airplane, an executive jet, a fighter and light and medium weight jet transports. The test conditions and airplane configurations were comparable to those normally used during takeoff, landing or holding pattern operations. For flight safety

the tests were performed at altitudes from 9500 feet to 12 500 feet In addition to an evaluation of the probe airplane response a flight test technique is suggested for determining minimum separation distance using as variable the ratio of vortex-induced roll acceleration to maximum lateral control acceleration and the gross weight of the generating aircraft Author

**INVESTIGATION OF AN AUTOMATIC SPIN PREVENTION
SYSTEM FOR FIGHTER AIRPLANES**
William P Gilbert and Charles E Libbey Washington Mar
1972 49 p refs
(NASA-TN-D-6670 L-8112) Avail NTIS CSCL 01B

An investigation was conducted to evaluate the effectiveness of an automatic spin-prevention system for current fighter airplanes as a first step in determining the feasibility of such a system. The concept makes use of the components of the conventional flight-control system with the addition of control logic to monitor angle of attack yaw rate and normal acceleration. Analytical techniques were used to study the system concept applied to three representative fighter configurations and model flight tests were employed to evaluate a prototype system on a representative fighter configuration. Emphasis was placed on the development of the control logic required. A discussion of possible implementations of the system concept is presented. Results of the investigation indicated that a relatively simple system (with full control authority) was effective in preventing the developed spins of the fighter configurations considered and that the system design is dependent on the stall and spin characteristics of the particular airplane. **LONGITUDINAL STABILITY AND CONTROL DERIVATIVES
OF A JET FIGHTER AIRPLANE EXTRACTED FROM FLIGHT
TEST DATA BY UTILIZING MAXIMUM LIKELIHOOD
ESTIMATION**

George G Steinmetz Russell V Parrish and Roland L Bowles
Washington Mar 1972 44 p refs
(NASA-TN-D-6532 L-7882) Avail NTIS CSCL 01B

A method of parameter extraction for stability and control derivatives of aircraft from flight test data implementing maximum likelihood estimation was developed and successfully applied to actual longitudinal flight test data from a modern sophisticated jet fighter. The results of this application establish the merits of the estimation technique and its computer implementation (allowing full analyst interaction with the program) as well as provide data for the validation of a portion of the differential maneuvering simulator (DMS). The results are presented for all flight test runs in tabular form and as time history comparisons between the estimated states and the actual flight test data. Comparisons between extracted and manufacturers values for five major derivatives are presented and reveal good agreement for these principal derivatives with one exception. This particular derivative is extensively investigated by utilizing the interactive capabilities of the computer program. The results of this investigation verify the numbers extracted by maximum likelihood estimation. Author

MIXER NOZZLE-EXTERNALLY BLOWN FLAP NOISE TESTS
Jack H Goodykoontz Robert G Dorsch and Donald E Groesbeck
Feb 1972 19 p
(NASA-TM-X-68021 E-6827) Avail NTIS CSCL 01B

A summary is given of the noise suppression tests conducted for the STOL aircraft. The tests were made using a large scale mixer nozzle and externally blown flap model. Data were obtained over a range of nozzle exhaust velocities (172 to 284 m/sec) and flap angles. Comparisons were made between the results of the mixer nozzle and those obtained with a standard single convergent nozzle. The resulting conclusions show that a reduction in noise level did occur using the mixer nozzle system. Author

FLIGHT SAFETY ASPECTS OF RADAR TECHNIQUES IN BIRD/AIRCRAFT COLLISION AVOIDANCE Final Report,
1 Oct 1967 - 30 Sep 1971

Warren L Flock Sep 1971 13 p refs
(Grant AF AFOSR-1377-68 AF Proj 9777)

(AD-732945 AFOSR-71-2917TR) Avail NTIS CSCL 01/2

Federal Aviation Administration and Air Force surveillance radars are capable of monitoring bird movements efficiently and can be used to minimize the hazard of collisions between birds and aircraft if those responsible for the operation of these systems take a sufficient interest in this application. This statement is supported by successive-time-exposure photographic recordings of bird echoes seen by the North Platte and Denver radars. In addition visits have been made to numerous FAA air route surveillance centers in the lower forty-eight states and DEW and AC and W radar sites in Alaska. Simultaneous monitoring of radar screens at three FAA centers on one occasion provided information about bird movements in the area from Ohio on the east to Arizona on the West. Air Force radars in Alaska have provided interesting new information on bird migration between Alaska and Siberia and along the coastline of Alaska. Such use of existing radar systems on a partially multipurpose basis justifies further their expense of operation. The research conducted with the support of the AFOSR has led to new programs of research at the University of Colorado involving the bird hazard in the immediate vicinity of airports and the identification of birds by radar. AIRCRAFT ACCIDENT REPORT ROCKY MOUNTAIN AIRWAYS, INCORPORATED, AERO COMMANDER 680V N6395U ASPEN, COLORADO 22 JANUARY 1970
29 Dec 1971 31 p refs
(NTSR-AAR-72-1) Avail NTIS

Rocky Mountain Airways Inc Flight 10 Aero Commander 680V N6395U crashed at approximately 0806 mountain standard time January 22 1970 near Aspen Colorado. The aircraft struck obstructing terrain after the pilot discontinued an approach to land because of an ice accumulation on the windshield of the aircraft. The probable cause of this accident was the pilot's use of other than the recommended procedures for a go-around following the discontinuance of a landing approach. The landing approach was discontinued and a go-around attempted because the aircraft was too high to attempt a straight-in approach. The ice accumulation on the windshield obscured the obstructing terrain. Author

The report describes the development and operation of the Carrier Aircraft Operational Compatibility System Model 2 (CAOCS - MOD 2). As with CAOCS - MOD 1 this computerized system allows a numerical evaluation of naval carrier aircraft in the aircraft carrier environment. The comprehensive evaluation which results is a combination of parameter and criteria definition coupled with a definitive rating system both of which have been computerized and are evidenced by a hard copy print-out. Mod 2 incorporates modifications to the earlier program principally involving standardization which resulted in reductions in computer operating times storage and core requirements and overall program volume. Contained within this report are descriptions concerning historical development program philosophies rating techniques employed and computer program development operation and maintenance. The aerodynamic characteristics of an M-117 bomb in steady incompressible potential flow are computed by representing the bomb planform with a discrete network of vortex singularities. Distribution of velocity and pressure coefficients over the bomb as well as total force and moment coefficients are calculated as functions of pitch attitude the surrounding flow field and various assumed vortex-lattice modelings. Both spatially uniform and nonuniform flow fields are investigated the nonuniformities were created by the presence of a parent aircraft. For a properly modeled bomb immersed in a uniform flow the lift and pitching moment coefficients summed over the entire configuration are found to be within 10 percent of wind tunnel measurements. When the bomb is surrounded by the disturbance flow field produced by an F-4C aircraft the incremental effects on lift and pitching moment are very similar for theory and experiment Author (GRA)

SIMULATION MODEL FOR THE PIPER PA-30 LIGHT MANEUVERABLE AIRCRAFT IN THE FINAL APPROACH

Joseph F Koziol Jr Jul 1971 30 p refs Sponsored by FAA
(AD-733757 TSC-FAA-71-11) Avail NTIS CSCL 01/2

The report describes the Piper PA-30 Twin Comanche aircraft and a representative autopilot during the final approach configuration for simulation purposes. The aircraft is modeled by linearized six-degree-of-freedom perturbation equations referenced to the aircraft stability axis. Other equations are presented which derive the body axis rates velocities and accelerations and ground referenced velocities (translation equations). The autopilot is a representative system for automatic ILS approaches from initial localizer track down to decision height. The glideslope system is engaged by approaching the glidepath at constant altitude (usually in the altitude hold mode) on the localizer beam. The pilot must take over manually at the decision height since light aircraft are not normally equipped with automatic flare capability. The aircraft autopilot model described herein has been used extensively in simulation studies at TSC and exhibits the expected behavior. Author (GRA)

INVESTIGATION OF STABILITY CHARACTERISTICS OF TETHERED BALLOON SYSTEMS

George R Doyle Jr and Jerome J Vorachek 30 Jul 1971
231 p refs

(Contract F19628-71-C-0091 AF Proj 7659)

(AD-731570 GER-15325 AFCRL-71-0406 SR 2) Avail NTIS CSCL 01/3

An analytical investigation of the dynamic behavior of tethered balloons is in progress. The report the second of three scientific reports covers a study of stability characteristics of tethered balloon systems. Balloon systems which are investigated use the British BJ Barrage Balloon the Vee Balloon and a Goodyear Aerospace Model No 1649 Single-Hull Balloon. The major tether construction is Columbian Rope Company's NOLARO utilizing prestretched polyester filaments. Three design altitudes 5 000 10 000 and 20 000 feet are considered. The model for the tethered balloon system consists of the streamlined balloon and a tether made up of three discrete links. Computer programs for the IBM 360 digital computer are presented to determine the characteristic equations of the systems and obtain the roots which represent the frequency and damping qualities. FRACTURE CONTROL PROCEDURES FOR AIRCRAFT STRUCTURAL INTEGRITY

Howard A Wood Jul 1971 90 p refs Presented at the Intern Comm on Aeron Fatigue Miami Beach Fla 13-14 May 1971

(AF Proj 1467)

(AD-731565 AFFDL-TR-71-89) Avail NTIS CSCL 01/3

The report reviews the application of applied fracture mechanics in the design analysis and qualification of aircraft structural systems. Recent service experiences are cited. Current trends in high strength materials application are reviewed with particular emphasis on the manner in which fracture toughness and structural efficiency may affect the material selection process. General fracture control procedures are reviewed in depth with specific reference to the impact of inspectability structural arrangement and material on proposed analysis requirements for safe crack growth. The relative impact on allowable design stress is indicated by example. Design criteria material and analysis requirements for implementation of fracture control procedures are reviewed together with limitation in current available data techniques. A summary of items which require further study and attention is presented. Author (GRA)

AN EVALUATION OF SEARCH AND RESCUE MISSION CHARACTERISTICS Final Report

Thomas J Brennan 10 Nov 1971 135 p refs

(AD-733987 NADC-AM-7136) Avail NTIS CSCL 01/3

The report provides an overview of the general requirements for an airborne rescue system to fulfill a military SAR (Search and Rescue) mission. Projected mission and airframe/propulsion system requirements are presented to provide a baseline for initial development analyses. A standard methodology for the conduct of detailed performance evaluation and overall mission analyses are proposed to define critical areas in SAR aircraft designs. An aircraft/propulsion system is designed to illustrate the applications.

Changes in aircraft technology and advances in electronic and electrical equipment design have caused increased demands for electric power. Batteries in the smallest and lightest design must be capable of delivering high rate currents under all ambient conditions for starting power, have good high rate charge acceptance and be available in the fully charged state in case of emergency. The report details all the problem areas, evaluates the various secondary electrochemical systems in terms of aircraft use, describes the redesign efforts of the Military Services and presents a critique of specifications covering aircraft batteries.

HUMAN FACTORS RESEARCH ON CARRIER LANDING SYSTEM PERFORMANCE Final Report 1966 - 1971

Clyde A Britton Jul 1971 22 p refs

(Contract N00014-70-C-0202 NR Proj 197-007)

(AD-733703) Avail NTIS CSCL 05/9

A five-year program of human factors research on carrier landing performance is summarized. Empirical measures of day and night final approach to landing were recorded and used to describe differences in landing performance across a wide variety of aircraft, ship, pilot, LOS and environmental conditions. The empirical data were used to develop carrier landing performance criteria which were applied to evaluate and assess the relative influence of system components on carrier landing system effectiveness. Carrier landing accident data for 1965-1970 are briefly reviewed and referenced. Studies covering the prediction of touchdown performance from approach data and pilot night landing proficiency from training measures are also summarized. A listing of all technical reports published during the research program is provided.

AIRCRAFT AND MISSILE RADAR UNITS UTILIZED TO COMBAT AN AIRBORNE ENEMY

V V Grigorin-Riabov ed [1971] 25 p refs. Transl into ENGLISH from the book Radiolokatsionnye Ustroistva (Teoriya i Printsipy Postroeniya) Moscow Sovetskoe Radio Press 1970 p 555-590

Avail NTIS National Translations Center John Crerar Library Chicago Ill 60616

The whole complex of equipment intended especially to annihilate airborne means of attacking the enemy is part of the aircraft interception system. On-board radar units of the interception system mounted on fighters and guided missiles of the air-to-air class as well as radar means of the system to protect the aircraft are examined. The required detection range, measurement accuracy and other radar characteristics depend essentially on the tactical and technical characteristics of the aircraft on which the equipment is installed and of the other facilities taking part in solving the given problem. Hence tactical-technical demands are fundamental.

AIR TRAFFIC CONTROL VOICE RECORDER DEVELOPMENT Final Technical Report 30 Jun 1970 - 30 Jun 1971

John T Sapp, Richard E Crowe and Eugene M Farole Sep 1971 253 p refs

(Contract F30602-70-C-0297)

(AD-731562 Rept-203296A RADC-TR-71-181) Avail NTIS CSCL 14/3

The report summarizes the results of the Phase I study portion of a two-phase program designed to establish the technical base for development of two new standard multichannel voice recorder-reproducer sets. These sets are intended for use in recording the radio and landline communications at fixed and mobile Air Traffic Control (ATC) facilities. The basic problem is to provide a technically feasible, cost effective means of recording 80 channels of voice data on a single reel of magnetic tape for a period of 25 hours. The choice of head track geometry and multiplexing techniques emerge as the most critical factors affecting the design concept. A study of multiplexing techniques as affected by tape transport anomalies and signal conditioning characteristics is conducted in depth. Tape drive electronics are analyzed for performance at low speeds to optimize the

recording time available for a given tape length. As a result of the Phase I study the conclusion is that a record/reproduce tape speed of 1 2 inches per second should be utilized to record three (3) channels of the input voice data on each track of a 28-track head/tape configuration using a double sideband multiplexing technique

**SOME PRELIMINARY STUDIES OF FACTORS INFLUENCING
AIRPORT CAPACITY INCLUDING CURVED FINAL
APPROACH PATHS**

N H Hughes K Watling and R A Harlow Mar 1971 43 p refs
(RAE-TR-71059 BR-25181) Avail NTIS

Fast-time simulation is used to examine the airport capacity benefit resulting from the use of a guidance and control system which permits curved final approach paths. The benefit is compared with that obtainable by other means such as parallel runway operation and reduced longitudinal separation at the approach gate. It is shown that a capacity improvement can be obtained from curved approach paths in the case of a runway used for arrivals only but this disappears when the runway handles mixed arrivals and departures. It is concluded that the way in which ATC operates the airport has a strong influence on the benefit realizable from applications of R & D to the capacity problem and it is considered that further studies in depth are

required to establish how ATC can take fullest advantage from such systems as area navigation and wide coverage approach and departure guidance

The report summarizes wire rope testing conducted at the Naval Air Engineering Center on the various test machines during the indicated period. The effects of synthetic and fiber cores upon wire rope fatigue and interstrand notching are examined as well as their relation to wire rope creep and its interrelation with fatigue. The influence of the number of wires in a round strand rope is investigated and an analysis is performed to determine the effect of the loss of metallic area from abrasion upon rope strength for these constructions. Fatigue data is given for ropes with variable wire strength and also for two non-rotating wire ropes. Load-strain and load-torque data is presented for a number of 6 X 25 FWLLRS fiber and synthetic core ropes.

INVESTIGATION OF AIR STREAM FROM COMBUSTOR LINER AIR ENTRY HOLES 2 EXPERIMENTS WITH PAIRED AIR ENTRY HOLES AND A NUMERICAL ANALYSIS

Tetsuro Aiba and Masayuki Inoue Dec 1970 41 p refs In JAPANESE ENGLISH summary
 (NAL-TR-227) Avail NTIS

Investigation of the jets flowing from air entry holes of the combustor liner of a gas turbine was carried out using simplified models Cold air was supplied through the air entry holes normally into the primary hot-gas flows The mass flow of the primary hot-gas and issuing jets were measured and the behavior of the air-jets was studied by the measurement of the temperature distribution of the gas mixture The air-jets flowing from paired air entry holes were studied for two different configurations one being parallel to and the other being normal to the primary flow The effects of jet and gas stream velocities gas temperature together with the two different configurations were investigated The discharge coefficient the maximum penetration of the jets the jet flow path the mixing of the jets and the temperature distribution across the jets were investigated Empirical expressions which describe the characteristics of the jets under the conditions of the experiments were formulated The experimental results showed that the penetration and the path of the jets flowing from the paired holes can be estimated from the modified empirical expressions obtained for the single air entry hole The path and temperature variation of the jets were also numerically analyzed considering aerodynamic and thermal characteristics and entrainment Author

SHOCK IMPINGEMENT CAUSED BY BOUNDARY LAYER SEPARATION AHEAD OF BLUNT FINS

Louis G Kaufman II Robert H Korkegi (ARL Wright-Patterson AFB Ohio) and Leo C Morton (ARL Wright-Patterson AFB Ohio) Feb 1972 18 p refs
 (RM-536) Avail NTIS

High speed flow past a blunt protuberance on a surface results in a complex three dimensional inviscid-viscous interaction flow field Tests were conducted to examine and obtain a better understanding of these interaction flow fields the most recent tests included detailed flow field surveys for Mach 3 flows ahead of blunt fins on a flat plate surface with turbulent boundary layers The separated flow was found to be unsteady attributed to a pulsating scavenging action of the horseshoe vortices In addition to the peak pressures and heating rates at shock impingement on the fin leading edge the plate experiences very large pressure and heating rates in the immediate vicinity of the fin root Results from these tests and many other sources were analyzed to provide a better description of the interaction flow field Author

BOUNDARY LAYERS ON AXISYMMETRIC BODIES AT SMALL ANGLE OF ATTACK

Oscar Pinkus Jun 1971 38 p refs
 (TAE-131) Avail NTIS

Utilizing an expression given by Cooke and a previously obtained solution for yawed cones an equation is derived for a three-dimensional equivalent radius for axisymmetric bodies at small angles of attack This function when used in any of the available axisymmetric boundary layer equations yields corresponding solutions for yawed bodies Expressions for the streamlines along which the boundary layer equations are to be integrated are also derived The solutions are linked to the prevailing inviscid flow properties which are allowed to vary in an arbitrary manner along the generatrix but in the circumferential direction are assumed to have the same functional variation as did the conical flow The method yields longitudinal and circumferential boundary layer properties for both concave and convex configurations Author

THE FRAUNHOFER LINE DISCRIMINATOR AN AIRBORNE FLUOROMETER

George E Stoertz 1969 34 p refs
 (NASA Order T-80485-C)

(NASA-CR-125643 USGS-IR-NASA-157) Avail NTIS CSCL 14B

An experimental Fraunhofer Line Discriminator (FLD) can differentiate and measure solar-stimulated luminescence when viewed against a background of reflected light Key elements are two extremely sensitive photomultipliers two glass-spaced Fabry-Perot filters having a bandwidth less than 1 A and an analog computer As in conventional fluorometers concentration of a fluorescent substance is measured by comparison with standards Quantitative use is probably accurate only at low altitudes but detection of luminescent substances should be possible from any altitude Applications of the present FLD include remote sensing of fluorescent dyes used in studies of current dynamics The basic technique is applicable to detection of oil spills monitoring of pollutants and sensing over land areas Author

N72-18450*# Geological Survey Washington D C
TESTING THE FRAUNHOFER LINE DISCRIMINATOR BY SENSING FLUORESCENT DYE

George E Stoertz 1969 53 p
 (NASA Order T-80485)

(NASA-CR-125653 USGS-IR-NASA-159) Avail NTIS CSCL 14B

The experimental Fraunhofer Line Discriminator (FLD) has detected increments of Rhodamine WT dye as small as 1 ppb in 1/2 meter depths. It can be inferred that increments considerably smaller than 1 ppb will be detectable in depths considerably greater than 1/2 meter. Turbidity of the water drastically reduces luminescence or even completely blocks the transmission of detectable luminescence to the FLD. Attenuation of light within the water by turbidity and by the dye itself are the major factors to be considered in interpreting FLD records and in relating luminescence coefficient to dye concentration. An airborne test in an H-19 helicopter established feasibility of operating the FLD from the aircraft power supply and established that the rotor blades do not visibly affect the monitoring of incident solar radiation.

SLEEVE BEARING MATERIALS AND LUBRICANTS FOR ADVANCED AIRFRAMES

Keith F Dufrane William A Glaeser and Fred F Zugaro 19 Nov 1971 38 p

(Contract N00019-71-C-0119)

(AD-733705) Avail NTIS CSCL 01/3

Bearing materials, shaft materials, and lubricants for airframe-bearing applications have been evaluated using an apparatus that simulates the loads, motions, and temperatures encountered by typical airframe bearings. Beryllium-copper bearings, which are capable of operation at very high stresses in reversing-load applications, were found to be limited to 20,000 psi for satisfactory operation in unidirectional loading. On the other hand, aluminum-bronze bearings were capable of operation at higher unidirectional loads than they were under reversing loads. Beryllium-copper bearings were also found to be sensitive to lubricant starvation; regular relubrication is required to insure satisfactory operation. Elevated-temperature bearing experiments using several versions of MIL-G-81322 grease showed a considerable variation in performance. While some versions operated successfully at 350 F (which is the maximum recommended temperature), others were limited to 300 F. MIL-G-81322 and MIL-G-27617 provided adequate corrosion protection for unplated steel shafts in all but severe corrosion situations. Plasma-sprayed aluminum-bronze and 440 C stainless steel were shown to be promising airframe-bearing and shaft materials.

SELF-LUBRICATING COMPOSITE MATERIALS FOR NAVAL AIRCRAFT DIFFERENTIAL THERMAL ANALYSIS OF SELF-LUBRICATING BEARING SYSTEM COMPOSITIONS AND WEAR DEBRIS Progress Report

Alfeo A Conte Jr 28 Jun 1971 25 p refs (AD-732761 NADC-MA-7138) Avail NTIS CSCL 13/9

Differential Thermal Analysis (DTA) was employed as an analytical device in the study of physical and chemical changes associated with high bearing contact area temperatures for self-lubricating Mo-S-Fe and W-S-Fe bearing systems which were investigated using Falex lubricant equipment Initial reaction temperatures for the elemental constituents comprising these systems were determined Wear debris from those self-lubricating systems which exhibited extended endurance life was analyzed using the DTA technique Free energy considerations together with thermoanalytical results and wet chemical tests suggest that compound formation i.e. MoS₂ and WS₂ is a key factor in achieving extended performance life for these systems

WARM FOG MODIFICATION STUDIES Final Report, 18 Aug 1969 - 31 Aug 1971

Theodore B Smith 31 Aug 1971 103 p refs

(Contract F19628-70-C-0069 AF Proj 7605 AF Proj 8620) (AD-733671 MRI-71-978 AFCRL-71-0467) Avail NTIS CSCL 04/2

A series of field experiments were carried out to investigate the treatment of warm fogs by hygroscopic materials The program philosophy has involved strong interaction between physical observations made in the field experiment phases and computer modeling which attempts to simulate the treatment effects An instrumented ground site was set up in October 1969 in the Noyo River Valley in northern California Fourteen tests were carried out using a DC-3 aircraft and a helicopter to dispense hygroscopic material at the fog top Extensive ground instrumentation recorded the effects of the treatment Results of the Noyo Valley experiments led to the establishment of a semi-operational test program at McClellan AFB in Sacramento California in January 1971 C-130 aircraft and an Air Force helicopter were used as the seeding aircraft A previous study was made at Forbes AFB in November 1970 to obtain dispensing characteristics from the helicopter Ground instrumenta-

tion at McClellan recorded the results of the tests. It was found that the hygroscopic treatment could be carried out readily within the constraints of an operational base using operational personnel for aircraft vectoring and dissemination. Author (GRA)

CLEAR AIR TURBULENCE RADIOMETRIC DETECTION PROGRAM Annual Report, 1 Jul 1970 - 30 Jun 1971
George W Wagner G G Haroules and Brown W E Jul 1971
64 p Sponsored by FAA
(AD-733762 TSC-FAA-71-19) Avail NTIS CSCL 04/1

The report presents a review of accomplishments for the Clear Air Turbulence Detection Program. The objectives instrumentation supporting hardware and interfaces leading up to and including the test flights for the reporting period are given. The ultimate goal of this program is the development of a remote method for detecting and thereby alerting high-altitude high-speed aircraft in sufficient time to avoid the hazards associated with Clear Air Turbulence. MATHEMATICAL WIND GUST MODEL AND COMPUTER PROGRAMS FOR USE WITH AIRCRAFT SIMULATIONS
Robert W Campagna Sep 1971 73 p refs
(DA Proj 1F1-63207-D-235)
(AD-733905 ECOM-3479) Avail NTIS CSCL 20/4

A description is given of atmospheric turbulence and its spectral characteristics with emphasis placed on the application of this information to the aircraft equations of motion. The gust model developed accounts for not only the effect of body axis gust velocities applied at the center of gravity but also includes the effect of gust gradients along the length and span of the aircraft. The latter effect is usually neglected but can be quite significant with small aircraft at high speeds. Thus the model varies as a function of both aircraft size and velocity. An analog and digital model is developed for use with large scale aircraft simulations or less sophisticated linearized aircraft models.

INVESTIGATE INCOMPATIBILITY BETWEEN GROUND AND AIRBORNE MEASUREMENTS OF VOR SPACE MODULATION Final Report Jul 1970 - Mar 1971
Matthew Naimo Jr Feb 1972 63 p refs
(Proj 041 305-05X)
(FAA-NA-72-18 FAA-RD-71-119) Avail NTIS

An investigation was conducted into the cause of incompatibility between ground and airborne measurements of VOR space modulation when using the latest flight inspection receiver FA-4165 3A. The effort included a survey of the existing procedures and equipment used throughout the FAA an evaluation of the ground measurement technique and an evaluation of the airborne measurement technique. The investigation identified problem areas with both the ground and airborne techniques but the largest contributing factor to incompatibility is due to the erroneous indication at times of the 30-Hz variable monitor output of the FA-4165 3A flight inspection receiver.

(Proj 330-018-01X)
(FAA-NA-72-25 FAA-RD-71-108) Avail NTIS

Testing results are presented for two low-powered distance measuring equipment (DME). The equipments were delivered to

National Aviation Facilities Experimental Center (NAFEC) to evaluate suitability of design concepts for use in preparing a prototype specification. The laboratory tests dealt with the effects of continuous wave interference on reply delay receiver sensitivity and squitter rate the effect of various squitter rates on airborne interrogators the effect of various interrogation levels on receiver delay and the effects of various transmitted pulse parameters on the pulse pair spectrum. The flight tests identified the coverage area provided by a 90-watt DME ground station to various commercial and general aviation type DME interrogators.

EVALUATION OF VOR FIX LIMITATIONS Final Report
D D Murphy Allan W Hunting and Frank Parr Feb 1972
61 p
(Proj FS-460-8)
(FAA-FS-600-4) Avail NTIS

A flight evaluation of non-precision VHF omnirange (VOR) approaches to determine possible improvements in the final approach fix distance without derogation of procedure flyability is discussed. Two published VOR procedures and two additional VOR procedures designed for evaluation purpose were flown. Simulated instrument conditions were used for comparison of flyability problems on final approach distances of 3.5 7.0 10.5 and 18.5 nautical miles. It was concluded that distance measuring equipment dual VOR receivers or an improved timing device for distances greater than 7.0 miles should be used.

INVESTIGATE AND ANALYZE DME TRAFFIC LOAD Final Report, Mar 1970 - May 1971
George J Hartranft and Harold Postel Feb 1972 27 p
(Proj 330-006-07X)
(FAA-NA-72-24 FAA-RD-71-109) Avail NTIS

The development of a method of measuring DME traffic for both a DME-saturated and non-saturated TACAN site is reported. DME traffic counts were conducted at the following Eastern Region VORTACs: LaGuardia Robbinsville Coyle Kenton Deer Park Sea Isle and Yardley. The LaGuardia VORTAC experienced the highest peak traffic of the VORTACs tested. The LaGuardia traffic count indicates the system is operating at 66 percent of full-load capacity during peak traffic.

EVALUATION OF TWO-BAY ANTENNA FOR VOR APPROACH MARKER BEACON Interim Report Jul 1970 - Sep 1971
Wesley O Mickey Mar 1972 42 p
(Proj 041-305 07X)
(FAA-RD-72-33 FAA-RD-72-11) Avail NTIS

The Scanwell two-bay marker beacon antenna was installed and tested at three sites. Tests were performed with two aircraft: a T-29 aircraft and a flight inspection DC-3 aircraft. The DC-3 was equipped and calibrated as determined by the investigation of the marker beacon flight inspection system. Preliminary test at two sites: the asphalt Multiple Object Phase Tracking and Ranging (MOPTAR) site and 500 feet northwest of the MOPTAR site were performed with the T-29 aircraft. These tests determined that the Scanwell antenna radiation pattern provided the desired ratio 8:3 or higher and that further testing was necessary to determine the power required to obtain the size pattern desired. Tests were performed with the DC-3 aircraft with the antenna installed at the approach end of runway 4. The output power tested of 1 2 and 4 watts was limited by the capabilities of the TV-26 transmitter. The power required to be assured of an 8 000-foot minimum major axis at 400 feet above ground level was 32 watts and was determined by projecting the increase of the radiation pattern observed when the power to the antenna was doubled.

DETERMINATION OF STOL AIR TERMINAL TRAFFIC CAPACITY THROUGH USE OF COMPUTER SIMULATION
M S Thesis

Robert Evans Rinker Sep 1971 69 p refs
 (AD-733185) Avail NTIS CSCL 17/7

The capacity of an air terminal for Short Takeoff and Landing aircraft is analyzed. The terminal is considered to be operating as part of an intra-urban air rapid transit system. The air traffic flow through the terminal is modeled by a computer simulation written in both the FORTRAN IV and GPSS languages. The model is used to solve the traffic capacity problem under two sets of traffic control rules. In the first case existing FAA rules which require 3 miles separation between arrivals and 2 miles between an arrival and a departure are used. In a second case the rules are 2 miles between arrivals and 1 mile between an arrival and a departure. A detailed description of the model is presented so that others might use the model. Some changes in operations and technology will be introduced in the post-1975 TACS. Among these will be the use of digital secure voice and data management automation. To permit the development of Air Force ground environment communications requirements for the TACS of this era, estimated total point-to-point data rates are needed. The anticipated TACS operations with some expected changes are modeled. The resulting information exchange data rates for the total ground environment is about three megabits. This total data rate is impacted far more because of use of digital secure voice than because of introducing data management automation. The two operational concepts which are modeled prove to have nearly identical data rate patterns. Author (GRA)

EVALUATION OF AIR TRAFFIC CONTROL MODELS AND SIMULATIONS

L O Higgins and P Mpontsikanis Jun 1971 108 p refs
 Sponsored by FAA
 (AD-733755 TSC-FAA-71-7) Avail NTIS CSCL 17/7

Approximately two hundred reports were identified as describing Air Traffic Control (ATC) modeling and simulation efforts. Of these about ninety analytical and simulation models dealing with virtually all aspects of ATC were formally evaluated. The bibliography lists all the reports identified. There is an introduction to and a summary of the evaluation effort as of the publication. The summary contains a preliminary indication of which models may be of value for ATC concept evaluation specifically traffic flow, safety and system loading aspects of proposed concepts. TIME/FREQUENCY SYSTEMS

E H Farr, L A Frasco, H D Goldfein and R M Snow Jun 1971 87 p refs Sponsored by FAA

(AD-733761 TSC-FAA-71-17) Avail NTIS CSCL 17/7

The report summarizes the work performed at DOT/TSC on the Time/Frequency ATC System study project. Principal emphasis in this report is given to the evaluation and analysis of the technological risk areas. A survey and description of proposed T/F system is included. The technical risk areas include the effects of multipath on signalling over radio links. Material is presented which bears on the comparative analysis of T/F with alternative technologies including satellite and beacon-based system concepts. It is concluded that the most critical problem areas requiring further study are (a) multipath effects on T/F systems and (b) systems operability under non-ideal conditions leading to graceful degradability. A CONCEPTUAL NETWORK MODEL OF THE AIR TRANSPORTATION SYSTEM THE BASIC LEVEL 1 MODEL
Aurel N DeHolland and Arthur S Priver Apr 1971 49 p
(AD-733752 TSC-FAA-71-3) Avail NTIS CSCL 17/7

A basic conceptual model of the entire Air Transportation System is being developed to serve as an analytical tool for studying the interactions among the system elements. The model is being designed to function in an interactive computer graphics environment which permits rapid alteration of rules and parameters as well as continuous real-time graphical monitoring of systems operations. The model described is the first member in an evolving hierarchy of increasingly complex models progressing in the direction of closer approximation to the real-world Air Transportation System. THE IMPACT OF INERTIAL NAVIGATION ON AIR SAFETY
R M Hershkowitz D OMathuna and K R Britting (MIT Cambridge) May 1971 27 p refs
(AD-733753 TSC-FAA-71-5) Avail NTIS CSCL 01/2

An analysis of inertial navigation system performance data was carried out to assess the probable impact of inertial navigation on the aircraft collision risk in the North Atlantic region. These data were used to calculate the collision risk between two aircraft flying at the same nominal flight level on adjacent tracks. The inertial system's error sources are treated in a statistical sense to infer the en route error behavior from the terminal error data. Collision risk estimates are derived for easterly and westerly transatlantic flights. Author (GRA)

PHYSICAL AND CHEMICAL PROPERTIES OF JP-4 JET FUEL FOR 1970 Technical Report, 1 Jan 1970 - 1 Jun 1971
Robert K Johnston Charles M Monita and William A Kemper
Wright-Patterson AFB Ohio AFAPL Sep 1971 129 p
(Contract F33615-69-C 1231 AF Proj 3048)
(AD-733352 SWRI-RS-577 AFAPL-TR-71-79) Avail NTIS CSCL 21/4

Test reports on 5611 samples of JP-4 fuel purchased in 1970 have been analyzed to determine average properties and distribution of values for each of eight geographical districts and the results have been compared with those of previous years. A

significant trend toward lower-boiling fuel was noted. The frequency of values outside the specification limits was quite low, below 0.1% for most tests. Criteria and methods used in the present analysis have been listed and suggestions have been made for improvements that can be made whenever a standardized test report form is available. ENGINE SELECTION FOR TRANSPORT AND COMBAT AIRCRAFT
James F Dugan 1972 76 p refs
Proposed for presentation at Conf on Aircraft Performance Prediction Methods and Optimization Brussels 24-28 Apr 1972 sponsored by Advisory Group on Aeron Res and Develop
(NASA-TM-X-68009 E 6783) Avail NTIS CSCL 21E

The procedures that are used to select engines for transport and combat aircraft are discussed. In general, the problem is to select the engine parameters including engine size in such a way that all constraints are satisfied and airplane performance is maximized. This is done for four different classes of aircraft: (1) a long haul conventional takeoff and landing (CTOL) transport; (2) a short haul vertical takeoff and landing (VTOL) transport; (3) a long range supersonic transport (SST) and (4) a fighter aircraft. For the commercial airplanes, the critical constraints have to do with noise while for the fighter, maneuverability requirements define the engine. Generally, the resultant airplane performance (range or payload) is far less than that achievable without these constraints and would suffer more if nonoptimum engines were selected. Author

NACELLE COWLING OF HIGH BYPASS RATIO TURBOFAN ENGINES

Robert L Lawrence 1971 39 p refs

(AD-733738 D6-18086TN) Avail NTIS CSCL 21/5

Consideration of mission factors for subsonic transports has led to selection of high bypass turbofan engines The proper integration of these engines with the airframe requires knowledge of the propulsive force supplied to the aircraft by the engines The propulsive force may be determined by experimentally evaluating the thrust or drag of the various parts of the engine cowling and synthesizing the nacelle drag by adding together the component drags Accurate experimental results are difficult to obtain The synthesis of component drags ignores interactions between components Consequently analytical tools are being developed to calculate the drag and thrust Suggested analysis techniques include incompressible and compressible inviscid and boundary layer flows Advances in calculation techniques are needed for compressible flows separated flows and interference effects

STRUCTURAL WEIGHT ANALYSIS OF HYPERSONIC

AIRCRAFT

Mark D Ardema Washington Mar 1972 50 p refs
(NASA-TN-D-6692 A-3905) Avail NTIS CSCL 20K

The weights of major structural components of hypersonic liquid hydrogen fueled aircraft are estimated and discussed. The major components are the body structure, body thermal protection system, tankage and wing structure. The method of estimating body structure weight is presented in detail while the weights of the other components are estimated by methods given in referenced papers. Two nominal vehicle concepts are considered. The advanced concept employs a wing-body configuration and hot structure with a nonintegral tank, while the potential concept employs an all-body configuration and cold integral pillow tankage structure. Characteristics of these two concepts are discussed and parametric data relating their weight fractions to variations in vehicle shape and size, design criteria and mission requirements and structural arrangement are presented. Although the potential concept is shown to have a weight advantage over the advanced, it involves more design uncertainties since it is farther removed in design from existing aircraft. Author

EVALUATION OF TEST DATA ON JET ENGINE COMBUSTOR BURN-THROUGH FLAMES Final Report, 4 May - 4 Jul 1971

H. S. Pergament and R. R. Mikatarian Mar 1972 48 p refs
Prepared for presentation at US Intern Transportation Exposition Washington D C 27 May - 4 Jun 1972
(Contract DOT-FA71NA-575)
(AeroChem-TP-261 FAA-RD-71-100 FAA-NA-72 30) Avail NTIS

A method was developed to interpret flat plate impingement pressure and temperature data taken in jet engine combustor burnthrough flames in terms of free stream velocities, pressures, temperatures, etc. These flames, which are high temperature turbulent underexpanded sonic jets, are caused in practice by the combustion gases impinging on (and burning a hole through) the wall of the combustor. Turbulent convective heat transfer coefficients were computed to determine radiation and conduction corrections to the temperature measurements. The influence of mixing between the burnthrough flame and ambient air on flame properties was also studied, and a correlation was developed between the angle of spread of the mixing region and enthalpy flux at the burnthrough hole. DESIGN AND EXPERIMENTAL RESULTS OF A HIGHLY LOADED LOW SOLIDITY, JET FLAP ROTOR

James L Bettner Washington NASA Mar 1972 117 p refs
(Contract NAS3-12424)
(NASA-CR-1968 EDR-7045) Avail NTIS CSCL 01A

The overall performance of a single-stage turbine with a low solidity jet flap rotor blade assembly was tested over a range of cavity pressure ratios, equivalent speeds, and expansion ratios. The rotor blades were designed with negative hub reaction and a mean-line axial chord solidity of 0.922. The results of the investigation are compared with the performance of a modified jet flap rotor blade which was designed to similar velocity diagrams but with a mean-section axial chord solidity of 1.541. Both rotors were tested with the same stator. Author

EFFECT OF LIMITED AMPLITUDE AND RATE OF FLAP MOTION ON VANE-CONTROLLED GUST ALLEVIATION SYSTEM

L. Keith Barker, Daniel J. Crawford, and Gene W. Sparrow
Washington Mar 1972 43 p refs
(NASA-TN-D-6733 L-8027) Avail NTIS CSCL 01A

An airplane (light transport type) is assumed to be in level flight (no pitching) through atmospheric turbulence which has a mean-square vertical gust intensity of 9.3 (m/sec)². The power spectral density of the vertical acceleration due to gusts is examined with and without a gust-alleviation system in operation. The gust-alleviation system consisted of wing flaps that were used in conjunction with a vane mounted ahead of the airplane to sense the vertical gust velocity. The primary purpose of this study was to examine the change in the effectiveness of the gust-alleviation system when the flap motion is limited in amplitude and rate. The alleviation system was very effective if no restrictions were placed on flap motion (rate and amplitude). Restricting the flap amplitude to 0.5 radian did not appreciably change the effectiveness. However, restricting the flap rate did reduce the gust alleviation, and restricting the flap rate to 0.25 rad/sec actually caused the alleviation system to increase the vertical acceleration above that for the no-alleviation situation. Based upon this analysis, rate limiting appears to be rather significant in gust-alleviation systems designed for passenger comfort. Author

FLIGHT-DETERMINED CHARACTERISTICS OF AN AIR INTAKE SYSTEM ON AN F-111A AIRPLANE

Donald L. Hughes and Harold J. Johnson Washington Mar 1972 66 p refs
(NASA-TN-D-6679 H-661) Avail NTIS CSCL 01B

Flow phenomena of the F-111A air intake system were investigated over a large range of Mach number, altitude, and angle of attack. Boundary-layer variations are shown for the fuselage splitter plate and inlet entrance stations. Inlet performance is shown in terms of pressure recovery, airflow, mass-flow ratio, turbulence factor, distortion factor, and power spectral density. The fuselage boundary layer was found to be not completely removed from the upper portion of the splitter plate at all Mach numbers investigated. Inlet boundary-layer ingestion started at approximately Mach 1.6 near the translating spike and cone. Pressure-recovery distribution at the compressor face showed increasing distortion with increasing angle of attack and increasing Mach number. The time-averaged distortion-factor value approached 1300, which is near the distortion tolerance of the engine at Mach numbers above 2.1. Author

TRANSONIC TESTING OF THE ENGINE NACELLE AIR INTAKE AND AFTERBODY

J. Leynaert Washington NASA Mar 1972 22 p Transl into ENGLISH of Entree d'air et arriere-corps de fuseau-moteur en transsonique Rept ONERA-TP-943 ONERA Chantillon France 1971 p 1-11
(Contract NASw-2035)

(NASA-TT-F-14154 ONERA-TP-943) Avail NTIS CSCL 01A

An example is presented of the study of a double-flux engine nacelle at high subsonic Mach numbers. The investigation was carried out at high Reynolds numbers with two separate models for the air intake and the afterbody. The test on the afterbody shows that the conditions of variable jets do not significantly affect the upstream flow around the nacelle intake and cowl except for the immediate vicinity of the exhaust. This fact justifies the large scale study of the air intake with a model supported downstream by a cylindrical tube replacing the jet. In the same way, mass flow rate variations of the air intake do not influence the flow around the afterbody within given limits. This

makes it possible to study the afterbody on an upstream sting
The significance and limitations of these studies are discussed in
terms of the test results Author

(Contract NAS1-9812)

(NASA-CR-1955 TR-174) Avail NTIS CSCL 01A

A method employed in the simulation of jettison of stores
from aircraft involving small scale wind-tunnel drop tests from a
model of the parent aircraft is described Proper scaling of such
experiments generally dictates that the gravitational acceleration
should ideally be a test variable A method of introducing a
controllable artificial component of gravity by magnetic means
has been proposed The use of a magnetic artificial gravity
facility based upon this idea in conjunction with small scale
wind-tunnel drop tests would improve the accuracy of simulation
A review of the scaling laws as they apply to the design of such a
facility is presented The design constraints involved in the
integration of such a facility with a wind tunnel are defined A
detailed performance analysis procedure applicable to such a
facility is developed A practical magnet configuration is defined
which is capable of controlling the strength and orientation of
the magnetic artificial gravity field in the vertical plane thereby
allowing simulation of store jettison from a diving or climbing
aircraft The factors involved in the choice between continuous
or intermittent operation of the facility and the use of normal or
superconducting magnets are defined Author

**A WIND-TUNNEL EVALUATION OF ANALYTICAL
TECHNIQUES FOR PREDICTING STATIC STABILITY AND
CONTROL CHARACTERISTICS OF FLEXIBLE AIRCRAFT**

Irving Abel Washington Mar 1972 70 p refs

(NASA-TN-D-6656 L-8105) Avail NTIS CSCL 01A

An experimental evaluation of analytical techniques for
predicting certain stability and control characteristics of a large
flexible aircraft is presented Analytical methods based on both
the model approach and flexibility influence coefficients are
developed to predict the aerodynamic characteristics of a flexible
airplane These methods are then applied to a flexibly scaled
model of a supersonic transport configuration Comparisons of
wind-tunnel data calculations based on the model approach and
flexibility influence coefficients are presented over the Mach
number range from 0.6 to 2.7 An examination of the results
obtained from this study indicates that both analytical techniques
predict reasonably well the effect of flexibility on the basic
longitudinal characteristics and that both techniques give generally
comparable results Author

F Schlottmann Cologne DGLR 1971 20 p refs In
GERMAN Presented at the 4th DGLR Annual Meeting
Baden-Baden West Ger 11-13 Oct 1971

Avail NTIS

The aerodynamic forces acting upon slender wing
configurations in roll were measured in a low speed wind tunnel
in order to determine the influence of variation of angle of attack
and roll angular velocity It was shown for the delta and square
wing models investigated that a nonlinear relationship exists
between rolling moment and roll angular velocity and relationship
between roll damping and angle of attack The reason for this is
the presence of the leading edge separation together with the
formation of rolled up vortices over the wing plane The different
vortex configurations and the resulting effects on roll damping
are discussed and compared with the theory ESRO

**REFLECTIONS OF REGULAR AND SINGULAR SHOCK
WAVES APPLICATION TO INTAKES AND TO THE MACH
DISC PROBLEM**

Pierre Diringer 1971 58 p refs In FRENCH ENGLISH
summary

(ONERA-NT-183) Avail NTIS

The reflection of shock waves within two-dimensional or axisymmetric inlets at supersonic speeds is computed using the method of characteristics. The singular reflection of shock waves on the axis of axisymmetric flow encountered in jet flows is calculated. The flow behind Mach disc is treated both by integral and one-dimensional flow methods. Complete calculations of the hypersonic flow in the sonic throat and in the second Mach disc are presented. The positions of shock waves slip line and boundary in subcritical jets are computed and confirmed by experimental results. ESRO

FREE FLIGHT MEASUREMENTS OF PRESSURE AND HEAT TRANSFER ON A BLUNT LEADING-EDGE CARET WING AT DESIGN AND OFF-DESIGN MACH NUMBERS (MACH SUB INFINITY EQUALS 0.9 TO 3.36)

G H Greenwood London Aeron Res Council 1971 46 p refs Supersedes RAE-TR-70129 ARC-32593

(ARC-R/M-3679 RAE-TR-70129 ARC-32593) Avail NTIS HMSO 1 61 PHI \$6 25

Pressure and heat-transfer measurements were made in free flight on a caret wing with blunt leading edges and nose at speeds below and above the design Mach number of 2.47. Comparison with data from a corresponding caret wing but with sharp leading edges indicates that the effect of "blunting" is confined to a region about 2 to 3 leading-edge diameters from the leading edge. At M sub infinity greater than 1.5 the data for the blunt leading edges and for the plane lifting surfaces were predicted with reasonable accuracy using easily-applied existing theory. A considerable reduction in heating rate was found in the wing junction. Author (ESRO)

A METHOD TO DERIVE ANGLE OF PITCH FLIGHT-PATH ANGLE AND ANGLE OF ATTACK FROM MEASUREMENTS IN NONSTEADY FLIGHT

R J A W Hosman Apr 1971 107 p refs (VTH-156) Avail NTIS

A method is described to determine the angle of pitch, the flight-path angle and the angle of attack of an aircraft during steady or nonsteady flight. These angles are determined by integration of the rate of pitch and the specific forces and not by directly measuring these angles. Errors in the estimates of the initial conditions of the integrations and of the zero shifts in the measurements are corrected by comparing the computed and the measured values of the change in altitude and airspeed. An error analysis is carried out to determine the accuracy with which the angles of pitch, flight path and attack are determined by the described method for steady as well as for nonsteady flight. APPLICATION OF THE RING VORTEX METHOD TO AERODYNAMIC DESIGN OF LIFTING ROTOR SYSTEMS

V I Shaydakov 10 Nov 1971 14 p refs Transl into ENGLISH from Izv Vysshikh Uchebn Zavedeni Aviat Tekhn (Kazan) no 3 1966

(AD-735018 FSTC-HT-23-709-71) Avail NTIS CSCL 01/3

The operation of the lifting rotor during flight with a horizontal velocity component has been the subject of considerable study. The ring vortex method is a simplified procedure for accurately determining the aerodynamic characteristics of the lifting rotor. The replacement of the vortex cylinder with a system of discrete vortex rings is equivalent to expansion of the vortex cylinder into rings and longitudinal vortices. Ignoring the longitudinal vortices is equivalent to ignoring the closure of the stream behind the rotor. For low loaded lifting rotors no significant error is thus created. GRA

EFFECTIVE AVIONICS MAINTENANCE

Robert A Cole 1971 12 p Presented at the 7th Ann FAA Intern Aviation Maintenance Symp Okla City 7-9 Dec 1971 Avail NTIS

Avionics maintenance is discussed in terms of aviation safety. The operational factors that work against aviation safety are reviewed and the avionic systems that enable aircraft to operate safely include communication navigation identification and control. Four points are emphasized: (1) Avionic systems are becoming increasingly important to the operational safety of modern aircraft. (2) Flight safety can be improved through effective avionic maintenance. (3) Mandatory requirements for periodic maintenance will not be necessary if avionic maintenance is made effective by early detection and correction of malfunctions. (4) Training test equipment self-test and built in test equipment can aid in making avionic maintenance more effective. F O S

N72-19016# Federal Aviation Administration Washington D C THE ALTIMETER CREDIBILITY GAP

Hugh R Skinner Jr 1971 72 p Presented at the 7th Ann FAA Intern Aviation Maintenance Symp Okla City 7-9 Dec 1971 Avail NTIS

Altimeter errors and their causes are discussed. The sources of altimeter errors include mechanical limitations of the instrument operation and installation errors, the use of the standard atmosphere for conversion of pressure into height indications and human error in reading the instrument. It is concluded that many errors of the system are inherent and cannot be reduced. However if extra effort is made by the user to reduce error factors over which he has control the overall accuracy will be improved. F O S

N72-19017# University of Southern Calif Los Angeles Inst of Aerospace Safety and Management ANALYTICAL TECHNIQUES FOR EFFECTIVE MAINTENANCE

David S Hall and Eugene L Holt 1971 14 p refs Presented at 7th Ann Intern Aviation Maintenance Symp Oklahoma City 7-9 Dec 1971 Avail NTIS

Systems analysis techniques are applied to aircraft maintenance to achieve aviation safety. The failure mode analysis method is discussed along with the fault tree analysis method. It is concluded: (1) The maintenance manager needs to know how to make decisions and that these decisions affect the safety and efficiency of his operation. (2) Many of these decisions can be made in advance when time or other pressure is not a factor. (3) Greater knowledge of the implications of a decision is available to the individual who approaches each problem systematically. (4) Systematic and analytical decision making is within the capability of today's maintenance activity. F O S

N72-19019*# National Aeronautics and Space Administration Langley Research Center Langley Station Va AERODYNAMIC PARAMETERS OF THE NAVION AIRPLANE EXTRACTED FROM FLIGHT

William T Suit Washington Mar 1972 62 p refs (NASA-TN-D-6643 L-7910) Avail NTIS CSCL 01A

An iterative method which is characterized as a maximum-likelihood minimum-variance technique was used to extract the aerodynamic parameters of a Navion airplane from flight data. The purposes were to compare the results with parameters obtained from wind-tunnel tests and with results obtained by analog matching the same data and to develop techniques for application of the parameter extraction program. Results from the study showed that the parameter-extraction program can produce aerodynamic parameters which will permit close estimation of the aircraft time histories used in the extraction process. The program determined an estimate of the standard deviations of the states and parameters. These estimates were used to indicate how well the calculated states fit the flight data and the confidence in the values of the estimated parameters. The study also showed that the values of the parameters were affected by the data and mathematical model used during the extraction process. Because of the lack of confidence in the parameters extracted by use of some of the sets of data several parameters were estimated by other methods. By using a combination of methods a set of parameters which gave a fit to the data was obtained. Author

THE PSYCHOSOCIAL RECONSTRUCTION INVENTORY A POSTDICTAL INSTRUMENT IN AIRCRAFT ACCIDENT INVESTIGATION

Robert E Yanowitch Stanley R Mohler and E A Nichols Jan 1972 7 p refs (FAA-AM-72-2) Avail NTIS

A new approach to the investigation of aviation accidents has recently been initiated utilizing a follow-on to the psychological autopsy. This approach, the psychosocial reconstruction inventory, enables the development of a dynamic retrospective portrait of the pilot-in-command subsequent to an accident. Twelve fatal general aviation accidents were studied in this way in 1971. When routine accident investigation data are supplemented by a psychosocial or lifestyle reconstruction a much deeper understanding of the cause of the accident often emerges. By increasing pilot insight into the role of emotions and situational stress in accident causation more effective accident prevention programs result. Author

N72-19021*# Boeing Co Seattle Wash STUDY OF AIRCRAFT IN INTRAURBAN TRANSPORTATION SYSTEMS, SAN FRANCISCO BAY AREA

Washington NASA Mar 1972 72 p refs (Contract NAS2-5969) (NASA-CR-2006) Avail NTIS CSCL 01B

The nine-county San Francisco Bay area is examined in two time periods (1975-1980 and 1985-1990) as a scenario for analyzing the characteristics of an intraurban commuter-oriented aircraft transportation system. Aircraft have dominated the long-haul passenger market for some time but efforts to penetrate the very-short-haul intraurban market have met with only token success. Yet the characteristics of an aircraft transportation system speed and flexibility are very much needed to solve the transportation ills of our major urban areas. The aircraft intraurban system is a technically feasible alternative to ground transportation systems. Although requiring some subsidy it becomes socially viable where substantial commuter traffic exists at ranges of 10 to 15 mi or more and where topographic features constrain ground travel. The general problem areas of community noise air traffic congestion ground transportation interface pollution and safety appear to have workable solutions. Author

N72-19022*# National Aeronautics and Space Administration Flight Research Center Edwards Calif LOW-LIFT-TO-DRAG-RATIO APPROACH AND LANDING

STUDIES USING A CV-990 AIRPLANE

Berwin M Kock, Fitzhugh L. Fulton and Fred J Drinkwater III
Washington Mar 1972 45 p refs
(NASA-TN-D-6732 H-672) Avail NTIS CSCL 01B

The results are presented of a flight-test program utilizing a CV-990 airplane flow in low-lift-to-drag-ratio (L/D) configurations to simulate terminal area operation approach and landing of large unpowered vehicles. The results indicate that unpowered approaches and landings are practical with vehicles of the size and performance characteristics of the proposed shuttle vehicle. Low L/D landings provided touchdown dispersion patterns acceptable for operation on runways of reasonable length. The dispersion pattern was reduced when guidance was used during the final approach. High levels of pilot proficiency were not required for acceptable performance. Author

NOISE PRODUCED BY A SMALL-SCALE, EXTERNALLY BLOWN FLAP

William A Olsen Robert G Dorsch and Jeffrey H Miles
Washington Mar 1972 39 p refs
(NASA-TN-D-6636 E-6662) Avail NTIS CSCL 01B

Noise data were obtained with a model of an externally blown flap of the type that is currently being considered for STOL aircraft. The noise caused by impingement of the jet on the flap is much louder than the nozzle jet noise. It is especially so directly below the wing. The noise level increases as the jet velocity and flap angle are increased. The sound power level increased with the sixth power of velocity. Several physical variations to the STOL model configuration were also tested. Two such variations a large board and a slotless curved plate

wing had the same power spectra density (Strouhal number curve) as the model. Author

(NTSB-AAR-72-6) Avail NTIS

On August 19 1971 a scheduled air taxi flight utilizing a Piper PA-31 crashed about 4 miles short of Augusta State Airport Augusta Maine while attempting an approach. The approach was being made in instrument conditions. Augusta State Airport is served by a VOR with DME capabilities requiring a nonprecision VOR approach. The weather conditions were above minimums but required an instrument approach. The pilot and two passengers were fatally injured two passengers received serious injuries and three passengers received minor injuries. The probable cause of this accident was the improper action of the pilot in discontinuing the execution of a nonprecision instrument approach and attempting to maintain visual flight while operating in instrument flight conditions at an altitude below the level of obstructing terrain. CROSS-SPECTRAL FUNCTIONS BASED ON VON KARMAN'S SPECTRAL EQUATION

John C Houbolt and Asim Sen Washington NASA Mar 1972 19 p refs
(Contract NAS1-9200)
(NASA-CR-2011 Rept-159) Avail NTIS CSCL 01B

Cross-spectral functions for the vertical and longitudinal components of turbulence of a two-dimensional gust field are derived from the point correlation function for turbulence due to von Karman. Closed form solutions in terms of Bessel functions of order 5/6 and 11/6 are found. An asymptotic expression for

large values of the frequency argument and series results for small values of frequency are also given. These results now form the base for studying the effect of spanwise variations in turbulence for a turbulence environment which is characterized by the von Karman isotropic spectral relations. Previous studies were based mainly on the Dryden-type spectral representation.

ENVIRONMENTAL EFFECTS OF TURBOJET ENGINES [DIE UMWELTWIRKUNGEN VON TURBOFLUGTRIEBWERKEN]

N K H Scholz 1971 37 p refs. In GERMAN. Presented at the 4th DGLR Annual Meeting, Baden-Baden, West Ger., 11-13 Oct 1971.

Avail NTIS

A survey is presented of environmental pollution produced by turbojet aircraft engines. The environmental effects are treated systematically and are subdivided into thermal noise and air pollution. Comparisons are made with other known pollutants. It is shown that noise generation is the hardest problem in turbine engine construction. Noise reduction is technically feasible but at the expense of power weight volume and costs. Cooperation between aircraft industry and basic research is found to be necessary.

ANNOYANCE OF THE SURROUNDINGS CAUSED BY JET AIRCRAFT TRAFFIC NOISE [LAERBELAESTIGUNG DER UMWELT DURCH DEN STRAHFLUGVERKEHR]

G Zimmermann, Cologne DGLR 1971 27 p refs. In GERMAN. Presented at the 4th DGLR Annual Meeting, Baden-Baden, West Ger., 11-13 Oct 1971.

Avail NTIS

A survey is presented of commercial jet aircraft noise problems and possible ways to minimize these in the vicinity of airports. Quantization measures of noise such as perceived noise level are discussed and the Q-formula developed for Germany is given. Possible means of engine noise reduction such as bypasses are shown. The noise situation in the vicinity of an airport is investigated, noting noise abatement profiles to reduce annoyance. A recent German law to limit aircraft noise is mentioned.

AN INVESTIGATION OF THE PRESSURE DISTRIBUTIONS ON A 45 DEGREE SWEEPED HALF WING, INCLUDING THE EFFECTS OF UPPER SURFACE SPOILERS

M D Dobson, London, Aeron Res Council 1971 95 p refs. Supersedes RAE-TR-68118, ARC-31187.

(ARC-CP-1184, RAE-TR-68118, ARC-31187) Avail NTIS HMSO £125 PHI \$490

Pressure measurements, flow visualization tests and force measurements were made on a 45 deg swept half wing to examine the flow conditions which prevail particularly in relation to the effectiveness of an upper surface spoiler as a roll control. Tests were made on 1/10 scale half-models in the 3 ft x 3 ft wind tunnel over a Mach number range 0.5 to 0.9. The wing flow is characterized by attached flow at low incidence and then at 4 deg to 5 deg the occurrence of leading edge separation near the tip and consequent formation of an upper surface vortex. As incidence is increased the separation point moves inboard and the vortex strength increases. An unvented spoiler on the upper surface of the wing is effective under attached flow conditions but loses effectiveness as it comes under the influence of vortex flow. Venting the spoiler reduces its effectiveness under attached flow conditions but increases its effectiveness under vortex flow conditions.

EXPERIMENTAL INVESTIGATION OF A HIGH-LIFT LOW-DRAG AEROFOIL

F H Kelling, London, Aeron Res Council 1971 37 p refs. Supersedes ARC-30983.

(ARC-CP-1187, ARC-30983) Avail NTIS HMSO 60p PHI \$255

One of a series of low-drag airfoils designated GU 25-5(11)8 was selected for low speed wind tunnel testing at Reynolds numbers around half a million. Coefficients of lift drag and pitching moment were obtained for a range of incidence using a two-dimensional wing. The maximum section lift coefficient obtained was 1.93 and the minimum profile drag coefficient was 0.0112. Results compared favorably with those deduced theoretically. The addition of a boundary layer trip to the upper surface caused the profile drag to decrease at some incidences. At the design lift coefficient of 1.4 the ratio of lift to profile drag was 108 at a Reynolds number of 0.63 million. The addition of an extended sealed flat-plate flap with a chord one tenth that of the airfoil at the trailing edge of the airfoil gave favorable results.

AN APPROXIMATE ANALYSIS OF THE NON-LINEAR LATERAL MOTION OF A SLENDER AIRCRAFT (HP 115) AT LOW SPEEDS

A Jean Ross and L J Beecham, London, Aeron Res Council 1971 34 p refs. Supersedes RAE-TR-70085, ARC-32345.

(ARC-R/M-3674, RAE-TR-70085, ARC-32345) Avail NTIS HMSO £125 PHI \$490

An approximate analytical method is developed for the solution of a fourth order nonlinear equation of motion from which the frequency and amplitude of a sustained oscillation may be derived. The criterion for the existence of the limit cycle is a modified form of Routh's discriminant, its sign and the sign of its derivative with respect to the square of the instantaneous amplitude. Comparisons at spot points show excellent agreement with exact digital computations. The method was applied to the lateral motion limit cycle encountered at low speeds on the HP 115 aircraft, and comparisons with the results of wind tunnel dynamic simulations show that the onset and nature of the sustained oscillation is predicted.

(AD-733756, DOT-TSC-FAA-71-8) Avail NTIS CSCL 01/3

Linearized six degree of freedom rigid body aircraft equations of motion are presented in a stability axis system. Values of stability derivatives are estimated for two representative STOL aircraft, the DeHavilland of Canada Buffalo and Twin Otter.

These estimates are based on analytical expressions included in the report. The combination of the equations of motion and the estimated stability derivatives provides an aircraft model which is useful for Navigation Guidance and ATC Studies. Resulting transient responses to control inputs are presented. GRA

The report covers the flight test of a three-axis hydrofluidic stability augmentation system for a UH-1-type helicopter. The design goal was to improve the performance of the aircraft without stabilizer bar in the speed range of 60 to 120 kn. The system was installed in a UH-1C helicopter. The helicopter's hydraulic power supply was used to power the FSAS controllers and servoactuators. The system improved the performance of the UH-1C helicopter in all three axes by increasing the damping, increasing the phugoid mode period and producing a constant vehicle rate proportional to cyclic stick input. VORTEX SHEDDING NOISE OF AN ISOLATED AIRFOIL Final Report, 30 Jun 1969 - 28 Dec 1971
Robert W Paterson Paul G Vogt Martin R Fink and C Lee Munich Dec 1971 121 p refs
(Contract DA Proj 200-61102-B-33-G)
(AD-734433 K910867-6 AROD-8726-1-E) Avail NTIS CSCL 20/1

The purpose of the study was to determine the vortex shedding noise characteristics of isolated airfoils in a Reynolds number range applicable to full-scale helicopter rotors Measurements of far-field noise airfoil surface pressure fluctuations and correlation coefficients were obtained for three airfoils Two models of differing thickness were tested as two-dimensional models (NACA 0012 and 0018 airfoils) and the third has a span of half the tunnel width (NACA 0012 airfoil) Airfoil vortex shedding noise was found to be discrete rather than broadband The frequency dependence of this noise on velocity and chord was found to be well predicted by a constant Strouhal number near 0.2 referenced to laminar wake thickness at the airfoil trailing edge The presence of a laminar boundary layer on the pressure surface of the airfoils was found to be critical to the presence of vortex shedding noise

FEASIBILITY STUDY TO DEVELOP A dc LINK VSCF SYSTEM Final Report

Reinhold Braum and Jerome B Murray Sep 1971 204 p (Contract F33615-68-C-1686 AF Proj 3145)

(AD-734067 AFAPL-TR-71-64) Avail NTIS CSCL 10/2

The Static Power Division of Gates Learjet Corporation proposed to the Air Force to design and build a variable speed constant frequency (VSCF) inverter system using the DC link approach. This approach has certain inherent advantages over mechanical systems which are now in common use in the aircraft or over other electronic inverter systems which do not employ the DC link principle. An electrical breadboard was constructed and tested. The program has shown that a DC link VSCF system offer superior electrical characteristics. It was also learned that it is extremely difficult to package the system within the small weight and volume required to make it attractive for aircraft use. Author (GRA)

ANALYSIS OF US ARMY HELICOPTER ACCIDENTS TO DEFINE IMPACT INJURY PROBLEMS c02

Joseph L Haley Jr In AGARD Linear Acceleration of Impact Type 26 Jun 1971 13 p refs

Avail NTIS HC \$6 00/MF \$0 95

An overall view of the occupant injury experience in US Army helicopters from January 1967 through December 1969 is presented. These data show that 40 percent of all occupant fatalities occurred in survivable accidents. This percentage shows the need for further improvement of helicopter crashworthiness. The statistics further indicated that fire was the single largest fatality cause with head injuries next in rank. A group of severe but survivable helicopter accidents of the same time period was studied. The study included three types of Army helicopters. Study results indicated that the problem of postcrash fire fatalities was more severe in the utility and cargo helicopters. It was also shown that potentially hazardous displacement of the transmission and main rotor blades occurred in one of every three utility and cargo helicopter accidents studied. Further a roll about the long axis usually occurred. At least one roll occurred in

2 of 3 light observation helicopter accidents 5 of 8 utility helicopter accidents and 1 of 2 cargo helicopter accidents The tendency to roll highlights the need to consider sideward occupant restraint and transmission/rotor blade moorings in these helicopters Author

A study of 468 ejections in the United States Air Force (USAF) reported during the period 1 January 1968 to December 1970 disclosed that one in nine crew members involved received major or fatal injuries as a result of forces encountered from system initiation to parachute opening In 49 cases the injuries received were classified as major (nonfatal) and three crew members were fatally injured The majority of the major injuries were attributed to the initial forces of ejection and were primarily compression fractures of the vertebral column These injuries continue to occur with consistent frequency in spite of the fact that the maximum accelerations of the catapults in use today are well below human tolerances The major factors which influence the incidence of ejection force injuries are the type catapult used ejection posture and age of the individual involved Of the three ejection posture appears to be the single most critical factor The correlation of the individuals weight by type catapult was not remarkable The frequency of injuries attributed to Q-forces showed a significant increase over previous studies of USAF ejection escape experience Although the incidence of high speed ejections has increased only slightly Q-force injuries occurred in 4 percent of all nonfatal ejections and accounted for 12 percent of the total major injuries Author

BLAST TESTING AIRCREW ESCAPE EQUIPMENT INCLUDING AN ACCOUNT OF A NEW TRANSONIC TEST FACILITY
 J M Rayne /n AGARD Linear Acceleration of Impact Type 26 Jun 1971 8 p refs
 Avail NTIS HC \$6 00/MF \$0 95

The design of a facility and its performance in determining the effectiveness of aircrew equipment to air blasts up to Mach 1.3 are discussed In this device the air speed decay profile is programmed and can be made to simulate a range of post ejection conditions from sea level to altitude Tests on a protective helmet demonstrate that it will probably be practicable to give head protection up to about 700 kt at sea level However failures of the visor which have occurred show that explosive disintegration of the whole helmet follows at air speeds from 600 kt upwards Helmet and visor failures usually occur within 100 msec of exposure and the blast effect can be regarded as an impact In testing helmets therefore the total duration of exposure to severe blast does not appear to be important On the other hand fabric is destroyed by the effects of flutter and the extent of damage seems to be time dependent Therefore in testing fabric protective equipment the shape of the air flow decay curve may well be important Author

SOME OBSERVATIONS ON COMPRESSION FRACTURES OF THE SPINE IN EJECTED GREEK PILOTS c04
 Pan P Symeonides /n AGARD Linear Acceleration of Impact Type 26 Jun 1971 3 p refs
 Avail NTIS HC \$6 00/MF \$0 95

The causes of compression fractures in Greek pilots during the decade 1960-1969 were investigated Resumption of duties by pilots with such fractures was studied It was found that 18 percent of the ejected pilots sustained compression fractures of the spine All fractures occurred during ejection and were located at the dorsolumbar region of the spine (T10 to L3) There was sufficient evidence that excessive tightening of the ejection seat belts (shoulder-buttocks) produces a permanent flexion of the spine which thus becomes more vulnerable during ejection If the wedging of a vertebra following a fracture does not exceed 1/3 of the height of the vertebral body and the symptoms are mild enough the pilot may return to the active service as jet pilot If wedging is greater than 1/3 he should not resume his previous duties either as jet or helicopter pilot because the created local kyphosis of the spine renders the neighboring vertebrae more vulnerable Author

 Avail NTIS HC \$6 00/MF \$0 95

The r sub x g sub y and g sub z linear acceleration and r dot sub x r dot sub y and r dot sub z angular acceleration terminology (the latter representing radians/sec sq) is reviewed It is urged that the representation of human acceleration environments by accelerometers be filtered to be flat (with less than 0.5 db variation) in response from 0 to 240 Hertz and then

attenuated above 240 Hz at 12 db per octave in preference to the more common representation by ac accelerometers (flat from about 10 to 2000 Hertz) This latter representation often obscures biologically important accelerations in metal ringing spikes Illustrations are drawn from crash studies of airplane airbag restraint systems and from mathematical representations of passenger compartment loads for automobile crashes of various types

ON VORTEX BURSTING

Henri Werle 1971 52 p refs In FRENCH ENGLISH summary
(ONERA-NT-175) Avail NTIS

In order to investigate the phenomena having effect on the wakes of delta wings at high incidences the vortex breakdown was studied using the flow visualization method. The first series of tests carried out at low speed in a hydrodynamic tunnel evidenced the analogy of vortex breakdown with boundary layer separation or wake bursting. The influence of an increasing pressure gradient on the initiation, the position and the type of breaking was confirmed. The evolution of the vortex breakdown phenomenon is analyzed as a function of several parameters in the case of delta wings alone or installed on aircraft models and is compared to results of similar wind tunnel or flight tests.

**THE PERFORMANCE OF AXIAL-FLOW COMPRESSORS
OF DIFFERING BLADE ASPECT RATIO**

G T S Fahmy (Baghdad Univ) London Aeron Res Council
1971 59 p refs Supersedes ARC-31818
(ARC-CP-1179 ARC-31818) Avail NTIS HMSO 95p PHI
\$3.90

The performance of axial-flow compressors is known to be adversely affected by increasing the aspect ratio. Experimental investigations have been carried out on a single-stage low speed axial-flow compressor with a parallel annulus and a hub-tip ratio of 0.750 at blade aspect ratios one and two. The Reynolds number was held constant at 1.9×10^6 and the tip clearances and blade row axial spacing at the inner diameter were kept constant. The overall performance characteristics show that the compressor of aspect ratio 1 has a wider range of operation and in general a higher static pressure rise than that of aspect ratio 2. It is concluded that the adverse effect of increasing the blade row aspect ratio on the performance of axial-flow compressor stages is caused by wall stall. A three dimensional flow calculation including profile secondary and clearance losses and secondary distortion of flow angles is described.

**THE VELOCITIES INDUCED BY DISTRIBUTIONS OF
INFINITE KINKED SOURCE AND VORTEX LINES
REPRESENTING WINGS WITH SWEEP AND DIHEDRAL
IN INCOMPRESSIBLE FLOW**

G G Brebner and L A Wyatt London Aeron Res Council
1971 29 p refs Supersedes RAE-TR-70077 ARC-32389
(ARC-R/M-3667 RAE-TR-70077 ARC-32389) Avail NTIS
HMSO 80p PHI \$3.35

Equations have been derived for the velocities induced in an incompressible flow by distributions of infinite source and vortex lines representing wings of infinite span and constant chord having both sweep and dihedral. Particular attention is paid to

the center section where the dihedral effects are large. The equations showed that such a source distribution does not represent a wing with symmetrical sections and that such a vortex distribution does not represent a thin wing. It is therefore not possible to separate the effects of wing thickness and wing load distribution even when linear-theory assumptions are retained.

Two approaches have been tried to develop and apply a new method for experimentally estimating at a far field position the spectra and intensity of noise originating from unit volume of a round jet extending to 7 D downstream. Cross-correlation between their filtered narrow-band counterparts, approach 2 has been developed and exploited. The measurements were analyzed via Proudman's form of Lighthill's integral further manipulated to apply to the approaches mentioned. The results showed qualitative agreement with some of the earlier theoretical predictions made by Ribner and by Powell.

Pneumatic automation technology showed a significant step forward during the recent years. A turning point in this control technique was reached in 1959/60 when the pneumo-automatic principle using elements without moving mechanical parts and based on the reciprocal hydroaerodynamic action of the operating fluid passing through fixed lines was applied for the first time. This new technology is identified today as fluidics or in the systems where air functions as the operating agent as pneumonics. The article deals with the application of fluidic (pneumonic) elements and systems in craft which responds most readily to the new technology, i.e. in aircraft, missiles and spacecraft.

**THE FLOW NEAR THE TIP AND WAKE EDGE OF A
LIFTING WING WITH TRAILING EDGE SEPARATION**

J Rom and H Portnoy Aug 1971 42 p refs
(Grant AF-AFOSR-2145-71 AF Proj 9781)
(AD-734791 TAE-132 AFOSR-72-0010TR SR-1) Avail NTIS
CSCL 20/4

A method is presented for improving the linearized solution for the flow near the tips and wake edges of a lifting wing in incompressible flow, mainly with a view to its more effective utilization in the calculation of the rolling up of the trailing vortex wake. The treatment takes account of the actual or in the case of the wake effective radius of the edge by the method of matched asymptotic expansions. The result is presented as an integral for the perturbation potential which is uniformly valid to first approximation in all parts of the flow field about the wing and close behind the trailing edge.

FLIGHT MODES** M S Thesis

N72-19484

Arthur William Nelson III Sep 1971 34 p refs
(AD-734873) Avail NTIS CSDL 20/4

The classical working states of the aircrew were studied employing the three-dimensional flow visualization tunnel at the Naval Postgraduate School Monterey California. The various states were simulated in an attempt to gain insight into some of the present problem in helicopter rotor design. This method was extended to include two particular phenomena: the critical part of the vortex ring state and Mangler's distribution of induced velocity about a rotor in the helicopter mode. Using a feasible distribution ascertained from the flow visualization, the induced velocity distribution was calculated for several points in the vortex ring state. Author (GRA)

INTEGRATED CHECK-OUT SYSTEM FOR SPACE LAUNCHERS AND AIRCRAFT SYSTEMS c10
Mauro Falleni In AGARD Avionics in Spacecraft Sep 1971 16 p refs
Avail NTIS HC \$6 00/MF \$0 95

A completely integrated system capable of performing all the necessary operations for the check-out of space launchers of the 1970's generation and for aircraft systems is described. It is to be considered as a general purpose system. Any kind of real-time operation necessary for check-out operations and all the post-flight computation can be carried on without external aids. The general philosophy of its conception is such that certain attributes such as simplicity, modularity, minimum specialization allow for the widest possibility of efficiency and expansion possibly required for future more elaborated check-out procedures. A number of degraded levels of operation is allowed, the lowest of them being the manual operation level in order to face different emergency situations. Special consideration has been given to the man-machine relationships and to the efficiency of maintenance and repair operations. Author

THE SCATTERING FROM ROUGH CURVED SURFACES OF A WAVE PROPAGATED THROUGH A RANDOM MEDIUM
Darryl P Greenwood and E J Powers Jr 1 Jun 1971 90 p refs
(Contract F44620-71-C-0091 AF Proj 4751)
(AD-734044 TR-104 AFOSR-71-1988TR) Avail NTIS CSDL 17/5

A generalized investigation of wave scattering from rough surfaces yields an expression for mean scattered power flux which is the spatial Fourier transform of the product of three transfer functions. The optical transfer function (OTF) of the propagating medium. The joint characteristic function of the surface roughness. A coherence involving the mean surface and the wave profile. The results are applicable to rough surfaces which do not have rms slopes greater than a few degrees. The solution is applied to laser scattering from aluminum and titanium airplane surfaces where the medium is the clear atmosphere. Proficorder tracing of sample rough surfaces reveals independent roughness and waviness components normally distributed with Gaussian (isotropic) autocorrelation.

ANALYSIS OF THE GASEOUS PRODUCTS ARISING FROM INSULATION COATINGS ON AIRCRAFT CABLING AT ELEVATED TEMPERATURES

R I Butt and J L Cotter Jul 1971 22 p refs
(RAF-TR-71134) Avail NTIS

The insulation coatings from five commercial aircraft cables were pyrolyzed in an inert atmosphere and most of the volatile degradation products were identified by combined gas chromatography-mass spectrometry. The principal pyrolysis products of nonfluorine containing insulation systems were carbon monoxide, methane, carbon dioxide, ethylene, propylene, and benzene. Insulations based on polytetrafluoroethylene and a copolymer of hexafluoro propylene/tetrafluoro ethylene gave low molecular weight fluorine containing compounds as well as carbon monoxide and carbon dioxide. Pyrolysis of an insulation material based on silicone rubber produced appreciable amounts of silicon containing cyclic compounds. Author (ESRO)

DEVELOPMENT OF A CHEMICAL COATING FOR AIRFIELD RUNWAY MARKING

Harvey Miller and Stanley P Dowdy Sep 1971 81 p refs
(Contract DOT-FA69WA-1154)
(AD-734320 USAMERDC-2012) Avail NTIS CSCL 11/3

The purpose of the project was to develop an airfield runway marking system that would be superior to systems presently utilized. A high-molecular-weight linear Bisphenol polyether was developed. A balanced ketonic-alcoholic-aromatic hydrocarbon solvent was found to be the most effective solvent to give rapid through-dry flexibility and a minimum of reactivity with the substrate. Three different antiskid additives were studied as well as a siloxane-type additive to improve bead retention and adhesion of the coating to the substrate. A styrene acrylate and a chlorinated rubber alkyd have also been evaluated. Author (GRA)

DETERMINATION OF STABILITY DERIVATIVES FROM FLIGHT DATA USING A NEWTON-RAPHSON MINIMIZATION TECHNIQUE

Kenneth W Iliff and Lawrence W Taylor Jr Washington Mar 1972 59 p refs

(NASA-TN-D-6579 H-626) Avail NTIS CSCL 12A

A modified Newton-Raphson or quasilinearization minimization technique for determining stability derivatives from flight data was developed and compared with simple-equations analog-matching, least-squares, and Shinbrot methods of analysis. For the data analyzed, the solutions computed by using the estimates obtained from the Newton-Raphson technique fit the data and determined coefficients adequately. A further modification to include a priori information was found to be useful. A model statistically similar to the flight data was analyzed using the same methods (excluding analog matching) and the Newton-Raphson technique was found to yield superior estimates. An approximate Cramer-Rao bound was compared with the error covariance matrix of the model and was found to provide information about the reliability of the individual estimates obtained. The technique was successfully applied to data obtained from a light airplane, a large supersonic airplane, and a lifting body vehicle. It was shown that the reliability of the estimates of a given coefficient obtained from these vehicles depends upon the data analyzed. Author

A METHOD FOR THE DETERMINATION OF THE OPTIMUM FEEDBACK FOR A CONSTANT LINEAR DYNAMIC SYSTEM WITH FEEDBACK CONSTRAINTS

P P van den Broek Jan 1971 51 p refs
(VTH-165) Avail NTIS

A dynamic system is represented by n linear first differential equations with constant coefficients. It is assumed that the m input variables are linearly dependent on the n state variables. The feedback gains are considered to be optimal if the infinite time integral of a positive definite quadratic functional of the state variables and the input variables are minimized for a given initial state of the system. Equations were derived for optimal feedback. These equations are valid if all feedback gains were chosen arbitrarily and if one or more feedback gains are subjected to constraints. If one or more state variables cannot be fed back, the solution of the equations is subject to the constraint that the corresponding feedback gains be equal to zero. In this case, the optimum depends on the initial condition of the system. Two iteration methods are suggested to solve the equations. Author (ESRO)

DIMENSIONAL ANALYSIS AND THE THEORY OF NATURAL UNITS

T H Gawain Oct 1971 117 p refs
(AD-735128 NPS-57-GN71101A) Avail NTIS CSCL 12/1

The document has been prepared as a text on dimensional analysis for students of aeronautics at this school. It develops the subject from a viewpoint which is inadequately treated in most standard texts but which the author's experience has shown to be valuable to students and professionals alike. The analysis treats two types of consistent units, namely fixed units and natural units. Fixed units include those encountered in the various familiar English and metric systems. Natural units are not fixed in magnitude once and for all but depend on certain physical reference parameters which change with the problem under consideration. Detailed rules are given for the orderly choice of such dimensional reference parameters and for their use in various applications. Author (GRA)

Results of experimental studies of turbulence in the stratosphere on a specially equipped high altitude subsonic aircraft flying over mountains and plains are considered. Data on

the geometry and structure of zones of turbulence are obtained in the stratosphere as in the troposphere there are local zones of turbulence but the extent and depth of these zones are much less in the stratosphere. Zones of turbulence in the stratosphere are considerably more intense over mountains than over plains because the stratosphere is made turbulent by breaking mountain waves. Examples of the distribution of zones of turbulence with respect to the tropopause and the level of maximum wind are given. Correlation and spectral characteristics of CAT in the stratosphere are also given. Some correlation functions have a harmonic tail which is not damped this suggests that there are wave motions in the stratosphere. Power spectra of the horizontal wind component in the stratosphere covering the meso-scale and micro-scale regions are also given. Author

ATC/CAS INTERFACE SIMULATION, EXPLORATORY PHASE Interim Report, Mar - Jul 1971
Gordon Jolitz Mar 1972 166 p
(Proj 052-241-03Y)
(FAA-RD-72-10 FAA-NA-72-8) Avail NTIS

A dynamic simulation was conducted to explore the nature of the interaction between the air traffic control (ATC) system and a collision avoidance system (CAS). The simulated ATC environment was a high density terminal area which provided for simultaneous approaches to parallel runways. The CAS threat logic was modeled after a design which was developed by a technical working group under the auspices of the Air Transport Association. Threat evaluation and maneuver output of the CAS were based on measured range, range rate, and altitude difference. The objective was to study the characteristics of ATC/CAS interaction as a function (a) of the location of the Cas switchpoint from full system threat evaluation to landing mode and (b) variations in controller technique. TEST AND EVALUATION OF A PORTABLE SCANNING BEAM GUIDANCE SYSTEM Final Report, Oct 1968 - Jun 1970
Vincent L Bencivenga Mar 1972 112 p
(Proj 074-319-03Y)
(FAA-RD-72-26 FAA-RD-72-16 FAA-NA-72-26) Avail NTIS

A portable scanning beam guidance system was installed and tested at 28 field locations. The sites selected were located at 16 different airports in the Eastern United States and were known to be difficult instrument landing system (ILS) sites. The system was tested both as a glide slope and as a localizer. During these tests, the guidance equipment was not affected by terrain irregularities, taxiing aircraft, vehicle movement, buildings adjacent to the airfield, etc. The system was installed, calibrated, and initially aligned without the need for extensive flight testing to verify system performance. DETERMINATION OF ANGLES OF ATTACK AND SIDESLIP FROM RADAR DATA AND A ROLL-STABILIZED PLATFORM
John S Preisser Washington Mar 1972 22 p refs
(NASA-TM-X-2514 L-7886) Avail NTIS CSCL 17G

Equations for angles of attack and sideslip relative to both a rolling and nonrolling body axis system are derived for a flight vehicle for which radar and gyroscopic attitude data are available. The method is limited to application where a flat nonrotating earth may be assumed. The gyro measures attitude relative to an inertial reference in an Euler angle sequence. In particular, a pitch, yaw, and roll sequence is used as an example in the derivation. Sample calculations based on flight data are presented to illustrate the method. Results obtained with the present gyro method are compared with another technique that uses onboard camera data. Author

POTENTIAL ECONOMIC BENEFITS OF FOG DISPERSAL IN THE TERMINAL AREA PART 1 ESTIMATING PROCEDURE Final Report
Nov 1971 225 p
(FAA Proj RD-260-001-01R)
(AD-735132 FAA-RD-71-44-1-Pt-1) Avail NTIS CSCL 17/7

The study was designed to provide estimates of the costs of disruptions (delays, diversions, and cancellations) of aircraft arrivals (landings) associated with a number of Category II and III weather situations, with the emphasis on fog situations at some of the major air carrier airports in the United States. As

such they would be measures of the potential economic benefits the airport users would realize if the adverse effects of these weather situations on aircraft landings were completely eliminated by weather modification and/or electronic and other approach and landing aids. This part of the report consists of the introduction to the report and a narrative description of the estimating procedure together with some of supporting statistical material developed in connection with the estimating process.

A dynamic simulation of air traffic operations in the San Francisco Bay terminal area was conducted to determine air traffic capacity estimates when several different airport expansion plans were implemented. Capacity estimates were made for the following separate conditions: first the present day system slightly modified to accommodate an increased volume of traffic; second with the operation of an additional runway at San Francisco Airport; third with the operation of an additional runway at Oakland Airport; and fourth with the operation of a new multiparallel runway airport located near the south end of San Francisco Bay and without the expansion to either San Francisco or Oakland Airports. An estimate was also made of the total system capacity when all airport expansions were implemented.

MICROWAVE GLIDE SLOPE SYSTEM ENGINEERING MODEL Final Report

C J Creedon Jun 1971 47 p

(Contract DOT-FA67WA-1745)

(AD-733694 FAA-RD-71-41 Rept-2472-1) Avail NTIS CSCL 17/7

The development of an L-band 1585-MHz glide slope system is described complete with monitoring capability that is fully compatible with the existing UHF glide slope system. It was necessary to develop and fabricate two slotted waveguide antennas (24 and 32 feet) solid state transmitter/modulator components, an aircraft frequency converter and an antenna unit. This system was tested and found to have good course quality with each of the antennas. However the 32 foot antenna was best suited to the lower glide slope angles of 2.5 to 2.7 degrees and the 24-foot antenna for the 2.7 to 3.0 degree path angles in terms of below path clearance.

ACOUSTIC INTERFERENCE BY REFLECTION APPLICATION TO THE SOUND PRESSURE SPECTRUM OF JETS

P Thomas NASA Washington Mar 1972 37 p refs
Transl into ENGLISH of the publ Etude des interferences acoustiques par reflexion Application aux spectres de pression acoustique des jets Paris SNECMA May 1969 p 1-20

(Contract NASw-2035)

(NASA-TT-F-14185) Avail NTIS CSCL 20/1

Theoretical and experimental studies of the interfering reflection phenomena which distort acoustic measurements and some fundamental relations for developing applicable correction factors were evaluated. Two hypotheses were examined: that of white noise and that of the actual source. Each was found to be valid in describing jet noise distribution characteristics assuming a perfectly reflecting surface. The phenomena of interferences are altered when the jet is near the surface and under certain sustained generator conditions.

EFFECTS OF RADIAL AND CIRCUMFERENTIAL INLET VELOCITY PROFILE DISTORTIONS ON PERFORMANCE OF A SHORT-LENGTH DOUBLE-ANNULAR RAM INDUCTION COMBUSTOR

Donald F Schultz and Porter J Perkins Washington Mar 1972 43 p refs

(NASA-TN-D-6706 E-6464) Avail NTIS CSCL 21A

Inlet air velocity profile tests were conducted on a full-scale short-length 102-centimeter-diameter annular combustor designed for advanced gas turbine engine applications. The inlet profiles studied include radial distortions that were center peaked and tip peaked as well as a circumferential distortion which was center peaked for one-third of the circumference and flat for the other two-thirds. An increase in combustor pressure loss was the most significant effect of the radial air velocity distortions. With the circumferential distortion exit temperature pattern factor doubled when compared to a flat velocity profile.

STUDY OF AERODYNAMIC NOISE IN LOW SUPERSONIC OPERATION OF AN AXIAL FLOW COMPRESSOR Final Report

R A Arnoldi 5 Mar 1972 80 p refs
 (Contract NASw-2249)
 (NASA-CR-125811 PWA-4411) Avail NTIS CSCL 21E

A study of compressor noise is presented based upon supersonic part-speed operation of a high hub/tip ratio compressor designed for spanwise uniformity of aerodynamic conditions having straight cylindrical inlet and exit passages for acoustic simplicity. Acoustic spectra taken in the acoustically-treated inlet plenum are presented for five operating points at each of two speeds corresponding to relative rotor tip Mach numbers of about 1.01 and 1.12 (60 and 67 percent design speed). These spectra are analyzed for low and high frequency broadband noise, blade passage frequency noise, combination tone noise and haystack noise (a very broad peak somewhat below blade passage frequency which is occasionally observed in engines and fan test rigs). These types of noise are related to diffusion factor, total pressure ratio and relative rotor tip Mach number. Auxiliary measurements of fluctuating wall static pressures and schlieren photographs of upstream shocks in the inlet are also presented and related to the acoustic and performance data. Author

STUDY OF THE COMPRESSION CAPACITY OF AXIAL COMPRESSORS [CONTRIBUTION A L'ETUDE DU TASSEMENT DES COMPRESSEURS AXIAUX]

J M Thiaville 1971 39 p refs. In FRENCH Presented at the 4th DGLR Annual Meeting, Baden-Baden, West Ger, 11-13 Oct 1971. Avail NTIS

The squeezing of chords and gaps is studied as a method of increasing the compression ratio by length unit in axial compressing. Two three-stage transonic compressors were tested. The decrease in chord was balanced by a proportional increase of blades. Test results for through-flow efficiency and surge limit are presented and analyzed for the two compressors over the full range of rotation velocities. The effect of adding fins on

the rotor wheels of compressor 2 is discussed. A complete computation of the flow through both compressors leads to a better knowledge of aerodynamical effects of the squeezing. ESRO

THE EFFECT OF A DIFFUSER ON THE CHARACTERISTIC OF STABLE OPERATION OF A CENTRIFUGAL COMPRESSOR STAGE

N L Zeldes 12 Jul 1971 19 p refs. Transl into ENGLISH from Dvigateli Vnutr Sgoraniya Sb Rabot (Moscow) no 8 1969 p 135-143.
 (FTD Proj 6040102)

(AD-730042 FTD-HT-23-795-71) Avail NTIS CSCL 21/7

Experimental results are presented from studies of stages of centrifugal compressors with different diffusers in relation to geometric characteristics of channels and grids with the number of vanes and vane placement angle are varied. A well defined analytic relationship has been established between the onset of flow separation with the moment of equality of the average flow angle at the outlet from the ring with intake angles of diffuser vane placement. Recording of the moment of onset of separation by oscillography and study of flow formation in the gap behind the ring with a pneumo probe confirmed the conclusion of constancy of flow angle in separation independently of rotor revolutions and affords tracking the analytic and experimental limits of separation for satisfactory agreement. EXPERIMENTAL INVESTIGATION OF MACH 3 CRUISE
HEATING SIMULATIONS ON A REPRESENTATIVE WING
STRUCTURE FOR FLIGHT LOADS MEASUREMENT

Roger A Fields Frank V Olinger and Richard C Momaghan
 Washington Mar 1972 42 p refs
 (NASA-TN-D-6749 H-676) Avail NTIS CSCL 20K

Radiant heating experiments were performed in the laboratory on an instrumented multispar wing structure to investigate (1) how accurately the structural temperatures of a Mach 3 cruise-flight profile could be simulated (2) what the effects of the heating and heating inaccuracies would be on the responses of strain-gage bridges installed on the structure and (3) how these responses would affect flight loads measurements Test temperatures throughout the structure agreed well with temperatures calculated for a Mach 3 profile In addition temperatures produced by two identical tests were repeatable to less than + or -6 K deg Thermally induced strain-gage-bridge responses were large enough to be detrimental to a high-speed flight loads program with a goal of establishing aerodynamic loads (exclusive of thermal loads) It was shown that heating simulation can be used effectively for thermal calibration (that is to provide corrections for a high-temperature environment) and that thermal calibration may not be needed if the simulation data are used to carefully select bridges and load equations Author

 (Contract EPA-68-04-0035)
 (PB-204196 TCM-635) Avail NTIS CSCL 21B

Five engines each of four different models of aircraft piston engines were tested for gaseous emission (NO HC and CO) All of the engines were new engines In addition two tests were performed to determine the effect of installing the sample probe in different locations One test was conducted to determine the effects of various air/fuel ratio settings on an engine at take-off power Author (GRA)

WASHINGTON NATIONAL AND DULLES INTERNATIONAL
AIRPORT FORECASTS FISCAL YEARS 1972 - 1983

Nov 1971 48 p
 Avail NTIS

Forecasts are presented for eight major traffic categories at Dulles International and Washington National Airports Categories included are passengers (air carrier and general aviation) cargo (express freight and mail) and aircraft operations (air carrier general aviation and military) The report contains actual figures in each of these eight categories for the last six years (1966 through 1971) The forecasts were prepared to meet the planning needs of the Federal Aviation Administration and the Department of Transportation Expected aviation demand for the Washington Metropolitan Area is indicated The forecasts provide

N72-19986

guidance to airport engineers regional airport planning officials
and policy makers with which they can develop their specialized
studies and recommendations on how this demand can best be
met Author

SUBJECT INDEX

AERONAUTICAL ENGINEERING / A Special Bibliography (Suppl 19)

JUNE 1972

Typical Subject Index Listing

The subject heading is a key to the subject content of the document. The Notation of Content (NOC) rather than the title of the document is used to provide a more exact description of the subject matter. The report number helps to indicate the type of document cited (e.g. NASA report translation, NASA contractor report). The accession number is located beneath and to the right of the Notation of Content, e.g. N72 11043. Under any one subject heading, the accession numbers are arranged in sequence with the AA accession numbers appearing first.

A

ACCELERATED LIFE TESTS

Accelerated full scale aircraft turbine engine corrosion tests in controlled environment, simulating salt, high temperature and humidity conditions
[NACE PAPER 76] A72-24320

ACCELERATION (PHYSICS)

Nonlinear longitudinal aerodynamic characteristics effect on rigid aircraft response to normal acceleration due to atmospheric turbulence, using power spectral technique
A72-23461

Pneumatically assisted parachute deployment at high altitudes with low accelerations
A72-24273

Linear and angular acceleration terminology, human acceleration simulation, airplane airbag restraint systems, and mathematical models of automobile crash loads
N72-19155

ACCELERATION PROTECTION

Acceleration protection system design, impact testing of restraint harnesses and ejection seat cushions, and implications
N72-19157

ACCELEROMETERS

Flight vehicle angular velocity measurement by accelerometers, deriving equations of motion
A72-24497

Statistical analysis of counting accelerometer data for normal acceleration of fleet aircraft
[AD-733678] N72-18468

ACCIDENT INVESTIGATION

Army helicopter accident analysis for defining impact injury problems and helicopter crashworthiness
N72-19129

ACCIDENT PREVENTION

Design criteria for safety factors in aircraft crash survival
[AD-733358] N72-18038

ACOUSTIC MEASUREMENTS

Structural Acoustic Monitor system for airframe structural proof testing, providing multichannel recording and aural monitoring of acoustic data derived from aircraft mounted accelerometers
A72-24146

Flight tests to determine methods for reducing airport community noise based on operationally optimum approach profiles
[NASA-CR-114417] N72-18001

Acoustic tests of fans used with fan jet engine and measurement of far field noise for several configurations
[NASA-TN-X-2528] N72-19845

Acoustic measurements of aerodynamic noise in low supersonic operation of axial flow compressor
[NASA-CR-125811] N72-19849

ACOUSTIC PROPERTIES

Acoustic tests of fans used with fan jet engine and measurement of far field noise for several configurations
[NASA-TN-X-2528] N72-19845

ACOUSTIC SIMULATION

Field and laboratory sonic boom simulators, noting required characteristics
A72-23323

ACTUATORS

Fly by wire and integrated actuator package techniques for developing survivable flight control system in jet aircraft
[AD-733582] N72-18040

ADAPTIVE CONTROL

Theoretical research on optimal control and automatic navigation
[AD-733397] N72-18664

Fuel flow control by sensing airflow conditions at discharge of engine compressor
[AD-734542] N72-19857

ADHESIVE BONDING

Nondestructive tests and their application for inspection of adhesive bonded structures, welded joints, and riveted or bolted joints
N72-19542

ADIABATIC FLOW

Pressure recovery calculation for subsonic adiabatic air flow through diffusers with tail pipes, assuming turbulent inlet boundary layer
A72-23855

AERIAL PHOTOGRAPHY

Correlation functions for angular vibrations of operating aerial camera during working cycle
A72-22947

Optical image filtering to simplify and facilitate automatic aerial photointerpretation processes
A72-23310

AERIAL RECONNAISSANCE

Use of multisensors in aerial reconnaissance/surveillance missions
[AD-733347] N72-18464

AERODYNAMIC BRAKES

Articulated autorotor decelerator for retarding and stabilizing air delivered stores
[AD-734309] N72-19041

AERODYNAMIC CHARACTERISTICS

Aerodynamic efficiency of plane slotted blade cascades of adjustable nozzle diaphragms in transport aircraft axial flow gas turbine engines
A72-23186

Nonlinear longitudinal aerodynamic characteristics effect on rigid aircraft response to normal acceleration due to atmospheric turbulence, using power spectral technique
A72-23461

Aerodynamic data acquisition with magnetic balance on wind tunnel model delta and AGARD G wing planforms and body of revolution
A72-24770

Influence of aerodynamic characteristics on handling of amphibious hovercraft
[CRANFIELD-AERO-7] N72-17992

Wind tunnel tests to determine aerodynamic characteristics of vertical takeoff jet fighter aircraft with six jet engines in transition speed range
[NASA-TN-X-2060] N72-18007

AERODYNAMIC COEFFICIENTS

SUBJECT INDEX

- Wind tunnel tests to determine effects of ground proximity on aerodynamic characteristics of V/STOL aircraft model
[NASA-TM-X-2212] N72-18008
- Wind tunnel tests to determine dynamic characteristics of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 1
[NASA-CR-114427] N72-18024
- Compilation of data obtained from wind tunnel tests of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 2
[NASA-CR-114428] N72-18025
- Aerodynamic characteristics of bomb in steady, incompressible, potential flow based on model
[AD-733325] N72-18037
- Turbine engine aerodynamics research on higher inlet temperature and blade loading
[NASA-TM-X-68016] N72-18782
- Flight test analysis of flow characteristics of air intake system of F-111A aircraft at supersonic speed
[NASA-TN-D-6679] N72-18996
- Aerodynamic design and performance of axial flow compressor rotor with tip speed of 1380 feet per second and 1.1 blade tip solidity
[NASA-TM-X-2449] N72-18998
- Aerodynamic performance of lifting helicopter rotor during vertical descent
[AD-734229] N72-19011
- Application of ring vortex method for determining aerodynamic characteristics of rotary wings and design of lifting rotor systems
[AD-735018] N72-19013
- Maximum likelihood technique used to extract aerodynamic parameters of Navion airplane from flight data
[NASA-TN-D-6643] N72-19019
- AERODYNAMIC COEFFICIENTS**
- Wind tunnel investigation of Reynolds number effects on boundary layer separation incidence and maximum lift coefficient of high-lift device equipped aircraft model
A72-24657
- Low speed wind tunnel test on low-drag airfoil at half a million Reynolds number, noting aerodynamic coefficients
[ARC-CP-1187] N72-19033
- AERODYNAMIC CONFIGURATIONS**
- Airfoil ram-wing air-water hybrid vehicle X-113 Aa design and operational principles based on aerodynamic ground effect, discussing flight tested performance characteristics
A72-22971
- Centrifugal turboengine diffuser with high enlargement area compared with logarithmic spiral types, discussing boundary layers, secondary flow, shapes and aerodynamic parameters
A72-23747
- Development of technique for measuring steady state lift loads on aircraft with T-tail configuration and determination of flutter speed
[RAE-TR-71035] N72-17991
- Structural design and performance tests on low drag ringwing-body configurations
[NLR-TR-69070-U] N72-17993
- Radial vane array for controlling wing tip vortices
[ATN-7102] N72-18026
- Wind tunnel tests to determine static stability and control characteristics of flexible aircraft
[NASA-TN-D-6656] N72-19001
- Analytical correlation of centrifugal compressor design geometry for maximum efficiency with specific speed
[NASA-TN-D-6729] N72-19002
- AERODYNAMIC DRAG**
- Wind tunnel study of aerodynamic drag for engine pod and its elements including air intake and afterbody
[NASA-TT-F-14154] N72-18997
- Slush drag, wheel spray, and hydroplaning research using pneumatic wheels and moving runway and water layer model test facilities
[ARC-R/M-3682] N72-19035
- AERODYNAMIC FORCES**
- German monograph on shaft and wall effect in aerodynamic measurements with three orifice pressure probes in wind tunnels
A72-22320
- Hovercraft internal and external aerodynamic forces, discussing control, suspension, yawing moments, directional and roll stability and random surfaces performances
A72-22824
- Aerodynamic forces calculation for constant vortex shear flows around airfoil fixed between rectilinear walls, noting resultant perpendicularity to Ox axis
A72-24115
- Aerodynamic force and moment measurements on model in magnetic wind tunnel balance system, using field equations
A72-24765
- Magnetic balance measurements of aerodynamic forces on spheres and slender cones in hypersonic low density wind tunnels, noting sting effect
A72-24771
- Subsonic unsteady aerodynamic pressures on blades of compressor wheel rotating freely in air stream
A72-24854
- Development of technique for measuring steady state lift loads on aircraft with T-tail configuration and determination of flutter speed
[RAE-TR-71035] N72-17991
- Estimating aeroelastic stability and forced response characteristics of thin walled, circular cylindrical shells
[AD-733370] N72-17996
- Fan and wing force data on wind tunnel model of VTOL lift fan in two dimensional wing, with and without exit louvers
[NASA-TN-D-6654] N72-18775
- Kernel function procedure for determining aerodynamic forces of planforms using linearized oscillating supersonic surface theory
[X-28-445] N72-18999
- AERODYNAMIC HEATING**
- Laboratory simulation of Mach 3 cruise heating on wing structure representative of X-15 aircraft for flight loads measurement
[NASA-TN-D-6749] N72-19922
- AERODYNAMIC LOADS**
- Wing load distribution and induced drag control by warping, summarizing linear theory and wind tunnel test results
A72-24218
- Computer program for calculation of airborne store loads, shears, and moments
[AD-733673] N72-17995
- Wind tunnel tests of models of helicopter rotary wings to determine blade element airloads in unstalled and stalled flight regimes
[NASA-CR-114424] N72-18005
- AERODYNAMIC NOISE**
- Coherent and incoherent structures of aerodynamic noise, analyzing compressor near field and hot jet IR emission source
[ONERA, TP NO. 983] A72-22816
- Aerodynamic noise produced by gas jet flow around airfoil, discussing sound reduction
A72-24107
- Aerodynamic noise generation mechanism of ideally expanded supersonic jet based on large scale flow instabilities, deriving mathematical model
A72-24331
- IR measurement of hot jets turbulence intensity axial and transverse profiles, noting application to sound sources detection
A72-24656
- Flight tests to determine characteristics of blade slap in rotary wings and effect on helicopter performance
[NASA-CR-1983] N72-19026
- Acoustic measurements of aerodynamic noise in low supersonic operation of axial flow compressor
[NASA-CR-125811] N72-19849
- AERODYNAMIC STABILITY**
- Ground effect wing vehicles stability in forward motion, deriving characteristic equations by linear analysis
A72-24844
- AERODYNAMIC STALLING**
- Analysis of boundary layer flow processes during airfoil dynamic stall and design of airfoil to delay onset of dynamic stall
[AD-734699] N72-19012
- AERODYNAMICS**
- Data acquisition and reduction for model

- aerodynamics in superconducting magnetic suspension and balance of supersonic wind tunnel facility
A72-24766
- German book on flow technology and fluid flow machines covering hydrodynamics, gas dynamics, aerodynamics, airfoils, wind tunnels, propellers, helicopters, turbomachines, blade cascades, etc
A72-25122
- AEROELASTICITY**
Estimating aeroelastic stability and forced response characteristics of thin walled, circular cylindrical shells
[AD-733370] N72-17996
Bending response of rotary wing blades when subjected to random input velocities for both hinged and unhinged cases of root end fixity
[AD-732395] N72-18028
- AERONAUTICAL ENGINEERING**
Casting instruction manual for steels and aluminum, magnesium and copper alloys in aeronautical manufacturing
[RAE-LIB-TRANS-1557] N72-18501
Dimensional analysis in aeronautical engineering including fixed and natural units
[AD-735128] N72-19671
- AERONAUTICS**
Heat transfer research review, discussing gas turbines, aeronautics, astronautics, nuclear power, thermal pollution and controlled fusion challenges
A72-23684
Handbook on aerospace research and development
[AD-729571] N72-18990
- AEROSPACE INDUSTRY**
Titles and authors of papers presented at Thirteenth Annual Israel Conference on Aviation and Astronautics - March 1971
[AD-733400] N72-17997
- AEROSPACE SCIENCES**
Scientific and technological research projects
N72-18242
- AEROSPACE VEHICLES**
Management planning and operation of test facilities for effective application to development of systems and equipment for aerospace vehicles
[AD-731548] N72-19307
- AFTERBODIES**
Wind tunnel study of aerodynamic drag for engine pod and its elements including air intake and afterbody
[NASA-TT-F-14154] N72-18997
- AILERONS**
State sensitivity functions in aircraft parameter identification for lateral dynamics under aileron deflection from model response and in-flight test data
A72-23807
- AIR BREATHING ENGINES**
Design and experimental performance of 20-inch diameter, tandem bladed, axial flow, transonic compressor rotor for advanced air breathing engines
[NASA-TM-X-2484] N72-18773
- AIR FLOW**
Pressure recovery calculation for subsonic adiabatic air flow through diffusers with tail pipes, assuming turbulent inlet boundary layer
A72-23855
Turbulent shear stress and kinetic energy characteristics of subsonic air flow in straight conical diffuser, using hot-wire anemometry measurements
A72-23862
Subsonic unsteady aerodynamic pressures on blades of compressor wheel rotating freely in air stream
A72-24854
Characteristics of jets flowing from air entry holes of combustion chamber of gas turbine for jet flow parallel to and normal to primary flow through turbine
[NAL-TR-227] N72-18279
- AIR INTAKES**
Transonic and supersonic wind tunnel test data on intake performance of supersonic mixed compression inlet flow
[NASA-CR-1977] N72-18786
Wind tunnel study of aerodynamic drag for engine pod and its elements including air intake and afterbody
[NASA-TT-F-14154] N72-18997
- AIR JETS**
Aerodynamic throttling effect due to air jet flow interaction in throat region of mainstream two dimensional nozzle flow
A72-24845
- AIR NAVIGATION**
Automation in planning and execution of flights, considering navigation, communication, flight instruments monitoring, control/stabilization and warning systems
A72-22780
Area navigation for Chicago-New York region, evaluating Decca Omnitrac 1A RNAV system installation in Boeing 727 aircraft
A72-23467
Flight testing of automated modular area navigation system for L-1011, describing computer, data storage and control-display units and electronic automatic chart system
A72-24271
Proceedings of conference on Omega navigation system and recommendations for modified hyperbolic navigation system
[NASA-CR-125807] N72-19718
- AIR POLLUTION**
Analysis of pollutant emissions from jet aircraft and combustion research for reducing emissions through combustor design and fuel atomization
[NASA-TM-X-68000] N72-18009
Air and noise environmental pollution from B-1 aircraft
[PB-201711-F] N72-18033
Design and development of F-15 fighter aircraft and analysis of effects of aircraft operation on air pollution and noise
[PB-201710-F] N72-18034
Fraunhofer line discriminator as remote sensor of fluorescent dyes used in pollution detection
[NASA-CR-125643] N72-18448
Environment pollution of turbine engine aircraft
N72-19030
Air pollution source inventory for ground operations at airports
[AD-733111] N72-19298
Hydrocarbons, carbon monoxide, carbon dioxide, and nitrogen oxides in gaseous emissions from limited sample of military and commercial aircraft turbine engines
[PB-204177] N72-19968
- AIR TRAFFIC**
Optimal high capacity runway systems for major airports, discussing multiple systems in anticipation of future mass air traffic requirements
A72-24169
Dynamic simulation of air traffic operations in San Francisco area to determine traffic capacity
[AD-727756] N72-19724
Airport traffic forecasts for Washington, D.C. for 1972 to 1983
N72-19975
- AIR TRAFFIC CONTROL**
Ground based ATC information processing systems analysis, considering controllers work load
A72-22778
Anthropotechnical aspects of aircraft taxiing guidance in airfield runway areas, suggesting computerized operational system
A72-22779
ATC systems analysis by computerized real time environmental simulation, taking into account new aircraft types, navigation and supervision aids
A72-22782
Aircraft collision near misses under IFR and VFR conditions, discussing ATC coordination, equipment failure and personal and planning problems
A72-22972
Turbulence measurement, reporting and subsequent data handling by upgraded ATC system, suggesting R and D program to evaluate wake turbulence effects on airport capacity
A72-23466
STARAN IV-X associative array processor for automation in ATC environment, considering air tracking, conflict prediction and resolution functions
A72-23818

AIR TRANSPORTATION

SUBJECT INDEX

Microwave equipment and technology application for instrument landing, terminal ATC, millimeter wave CAT detection and satellite communications
 A72-24036
 ICAO standardized taxiing guidance and airports surface traffic control procedures
 A72-24171
 Electronics and data processing technology effects on radar state of art, discussing automated air traffic control surveillance systems
 A72-24490
 Airborne VHF omnirange /VOR/ systems minimum operational standards for navigation and communication in air traffic control
 A72-24725
 Operational aviation meteorological requirements, reviewing aircraft categories, ATC systems and avionics and navigational aids
 A72-25078
 Flight safety standards and air traffic control problems of supersonic aircraft passenger service [NASA-TT-P-13952]
 N72-18000
 UTES multipurpose radar complex for air traffic control [AD-733273]
 N72-18173
 Multichannel voice recorder-reproducer sets for air traffic control [AD-731562]
 N72-18180
 Flight tests of VHF omnirange navigation system to determine maximum fix distances for safe approaches and equipment required for safe weather operations [FAA-PS-600-4]
 N72-18651
 Procedures for collecting distance measuring equipment traffic loading data for TACAN ground stations [FAA-WA-72-24]
 N72-18653
 Models of information exchange and data rates for post-1975 automated tactical air control system deployment [AD-733584]
 N72-18665
 Air traffic control models and simulations for evaluating traffic flow, safety, and system loading aspects - bibliographies [AD-733755]
 N72-18666
 Impact of inertial navigation on air safety and modeling techniques to assess effects of air traffic control satellite surveillance system [AD-733758]
 N72-18667
 Evaluation of technological risk areas of time/frequency air traffic control system [AD-733761]
 N72-18668
 Computer graphic simulation of air transportation system [AD-733752]
 N72-18669
 Development of collision risk model to analyze effects of separation standards on aircraft safety during parallel tracking operations in North Atlantic Ocean [AD-733754]
 N72-18671
 Analysis of human factors problems associated with air traffic control systems with emphasis on impact caused by automation [NASA-CR-1957]
 N72-19102
 Computerized air traffic control systems [AD-733759]
 N72-19247
 Spatial Fourier transform for wave scattering from rough surfaces [AD-734044]
 N72-19576
 Dynamic simulation procedures to determine interaction between air traffic control system and collision avoidance system [FAA-RD-72-10]
 N72-19719
 Economic analysis of effect of fog on air traffic and benefits of fog dispersal capability in terminal area [AD-735132]
 N72-19722
 Numerical analysis of flight planning and air traffic control procedures for civil aviation [AD-734881]
 N72-19728
AIR TRANSPORTATION
 Book on IATA organization and functions, discussing international aviation history, conference machinery, enforcement of conference resolutions, air transportation economics, public corporations, etc
 A72-23846
 Requirements for airborne rescue system in military search and rescue missions

[AD-733987]
 N72-18047
 Analysis of short haul aircraft transportation system for San Francisco Bay area, California [NASA-CR-2006]
 N72-19021
AIRBORNE EQUIPMENT
 Small scale atmospheric turbulence measurement with airborne hot-wire anemometer, discussing optimal choice of experimental parameters
 A72-22435
 Airborne gas chromatograph for real time diffusion analyses, describing flight test results with sulfur hexafluoride plumes
 A72-22451
 Development trends in airborne man machine flight control, discussing optimal division between human pilot and machine in relation to total system performance and economic factors
 A72-22781
 Area navigation for Chicago-New York region, evaluating Decca Omnitrac 1A RNAV system installation in Boeing 727 aircraft
 A72-23467
 Flight testing of automated modular area navigation system for L-1011, describing computer, data storage and control-display units and electronic automatic chart system
 A72-24271
 Stochastic optimization of airborne laser seeker system design parameters to maximize target acquisition probability through regression analysis of data from computerized model
 A72-24682
 Airborne VHF omnirange /VOR/ systems minimum operational standards for navigation and communication in air traffic control
 A72-24725
 Onboard aircraft and missile radar systems for interception of airborne targets
 N72-18158
 Sensors for data acquisition systems for earth observations by spacecraft or aircraft [NASA-TM-X-62107]
 N72-18199
 Ground station data reduction equipment for airborne analog and digital magnetic tape data acquisition system [ARI/ME-130]
 N72-19238
AIRBORNE/SPACEBORNE COMPUTERS
 Sailplane computer displaying rate of climb simultaneously with airspeed for pilot determination of best strategy for local upcurrent-downcurrent conditions
 A72-23550
 Reliability program for SAAB 37 Viggen airborne computer, discussing prototype and components operating tests and failure rates
 A72-23984
AIRCRAFT
 Subsonic wind tunnel for testing full scale aircraft [NASA-TM-X-62106]
 N72-19291
AIRCRAFT ACCIDENT INVESTIGATION
 Psychological autopsy for analyzing immediate psychodynamic processes leading to suicidal aircraft accidents [FAA-AA-72-2]
 N72-19020
AIRCRAFT ACCIDENTS
 Book on general aviation safety covering statistical accident records, accident analysis, crashworthiness, preventive measures, etc
 A72-23750
 Aircraft incident report involving DC-9 aircraft contacting surface of ocean near Martha's Vineyard, Massachusetts on 22 June, 1971 [NTSB-AAR-72-4]
 N72-18002
 Aircraft accident report of Aero Commander aircraft at Aspen, Colorado on January 22, 1970 [NTSB-AAR-72-1]
 N72-18029
 Development of collision risk model to analyze effects of separation standards on aircraft safety during parallel tracking operations in North Atlantic Ocean [AD-733754]
 N72-18671
 Report of aircraft accident at Augusta, Maine airport during landing approach of PA-31 aircraft, August 1971 [NTSB-AAR-72-6]
 N72-19028
 Probability of aircraft accidents through collisions with birds [AD-734803]
 N72-19049

SUBJECT INDEX

AIRCRAFT EQUIPMENT

- Analysis of aircraft accidents resulting from pilot disorientation and vertigo during flights on military aircraft and helicopters
[AD-735119] N72-19053
- Aircraft accident injuries and reconstruction from linear impact
N72-19123
- History of aircraft crash injury studies and facilities for simulation
N72-19150
- AIRCRAFT APPROACH SPACING**
- Curved final approach and landing flight path for increased airport capacity
[RAE-TR-71059] N72-18265
- Procedures for collecting distance measuring equipment traffic loading data for TACAN ground stations
[FAA-NA-72-24] N72-18653
- AIRCRAFT CARRIERS**
- Computerized system for numerical analysis of carrier aircraft
[AD-732755] N72-18030
- Development of method for determining ramp altitude clearance of aircraft approaching aircraft carrier for landing and identification of unsafe situation
[AD-732760] N72-18032
- Factor analysis and statistical data for human carrier landing performance criteria
[AD-733703] N72-18120
- AIRCRAFT COMMUNICATION**
- Automation in planning and execution of flights, considering navigation, communication, flight instruments monitoring, control/stabilization and warning systems
A72-22780
- Airborne VHF omnirange /VOR/ systems minimum operational standards for navigation and communication in air traffic control
A72-24725
- AIRCRAFT CONFIGURATIONS**
- Iron rotational hysteresis effect in cold magnetic balance wind tunnel system for spinning aircraft configurations and subsonic flow regimes
A72-24776
- AIRCRAFT CONTROL**
- Anthropotechnical aspects of V/STOL aircraft control, discussing instrument and control systems concepts based on development and flight tests of experimental Do-31 VTOL aircraft
A72-22784
- DC 10 aircraft automatic flight guidance system, noting dual-dual fail-passive autoland
A72-23448
- Near optimal closed loop control laws for fixed time pursuit-evasion differential game between two aircraft in vertical plane, using dynamic modeling
A72-23805
- State sensitivity functions in aircraft parameter identification for lateral dynamics under aileron deflection from model response and in-flight test data
A72-23807
- Longitudinal stability and control derivatives of jet fighter aircraft extracted from flight test data by utilizing maximum likelihood estimation
[NASA-TN-D-6532] N72-18013
- Fly by wire and integrated actuator package techniques for developing survivable flight control system in jet aircraft
[AD-733582] N72-18040
- Determining stability and control derivatives of airplanes from flight data using modified Newton-Raphson minimization technique
[NASA-TN-D-6579] N72-19659
- AIRCRAFT DESIGN**
- Wing structural weight estimation for civil aircraft preliminary deriving generalized formula based on wing root bending moment for specified flight condition
A72-22909
- Fixed wing agricultural aircraft, comparing different designs in terms of performance, safety, handling and economic efficiency
A72-22940
- Airfoil ram-wing air-water hybrid vehicle X-113 Am design and operational principles based on aerodynamic ground effect, discussing flight tested performance characteristics
A72-22971
- DC-10 aircraft structural design, flight handling characteristics and fatigue tests
A72-23446
- Deterministic optimization of aircraft undercarriage suspension characteristics for taxiing induced vibration minimization, discussing damping and stiffness functions and hybrid computer solution
A72-23458
- Simply supported skew plates stability under combined loading, noting wing and tail design applications for high speed aircraft and missiles
A72-24196
- STOL and V/STOL transport aircraft design requirements consideration based on common propulsion and lift engine types use, noting fan lift solution superiority
A72-24865
- RCA SECANT aircraft collision avoidance system avionics design using nonsynchronous techniques
A72-24866
- Legal aspects of international cooperation on aircraft design and production, discussing work distribution, project management and liabilities sharing
A72-24881
- Mitsubishi IT-2 jet trainer aircraft, presenting design, structural and performance data
A72-25107
- Aircraft design, safety, reliability, and maintenance

AIRCRAFT FUELS

SUBJECT INDEX

[AD-733283] N72-18041
Design, development, and evaluation of electric storage batteries used for aircraft power supplies [AD-733289] N72-18057
Development of magnetic artificial gravity test facility for use in wind tunnel tests to simulate separation of external stores from aircraft in flight [NASA-CR-1955] N72-19000
Feasibility analysis of variable speed constant frequency inverter system using dc link approach for aircraft use [AD-734067] N72-19065
Implementation of instrumentation techniques for service testing of aircraft and airborne equipment to meet military requirements [AD-734306] N72-19300

AIRCRAFT FUELS
Ignition characteristics of aircraft fluids impinging on hot surfaces under air flow conditions found during flight [AD-734238] N72-19964

AIRCRAFT GUIDANCE
Control synthesis equations for aircraft motion on phase space surface A72-22208

AIRCRAFT HAZARDS
Probability estimates of aircraft encounters with hail, discussing variations with locality, hailstone size and height and supersonic transport experience A72-23423
Search radar monitoring of bird movements to prevent aircraft collision accidents [AD-732945] N72-18027
Dynamic simulation procedures to determine interaction between air traffic control system and collision avoidance system [FAA-RD-72-10] N72-19719

AIRCRAFT INDUSTRY
Survey and analysis of application of nondestructive inspection methods to aircraft structures [AGARD-R-587-71] N72-19541
Aircraft industry survey for analysis of nondestructive inspection methods application to commercial aircraft for 1968 to 1970 N72-19543

AIRCRAFT INSTRUMENTS
Anthropotechnical aspects of V/STOL aircraft control, discussing instrument and control systems concepts based on development and flight tests of experimental Do-31 VTOL aircraft A72-22784
Automated navigation management in cockpit, considering modular navigation /MONA/ dual channel system of L-1011 TriStar A72-23450
Micrometeorologic measurements of earth surface temperature by airborne radiometers [NASA-TT-F-14139] N72-18621

AIRCRAFT LANDING
Buccaneer Mk 2 and F-4K Phantom takeoff and landing performance improvement due to boundary layer control by leading and trailing edge blowing A72-22973
Aircraft accident report of Aero Commander aircraft at Aspen, Colorado on January 22, 1970 [NTSR-AAR-72-1] N72-18029
Development of method for determining ramp altitude clearance of aircraft approaching aircraft carrier for landing and identification of unsafe situation [AD-732760] N72-18032
Simulation of PA-30 Comanche light aircraft performance and autopilot operation during final approach configuration [AD-733757] N72-18043
Factor analysis and statistical data for human carrier landing performance criteria [AD-733703] N72-18120
Design and development of six-degree-of-freedom visual approach and landing simulator for training F-105 pilots [AD-733240] N72-18267
Low powered distance measuring equipment for terminal facilities [FAA-NA-72-25] N72-18650
Evaluation of takeoff and landing performance of commercial STOL airplanes [NASA-TT-F-14166] N72-19023

Report of aircraft accident at Augusta, Maine airport during landing approach of PA-31 aircraft, August 1971 [NTSB-AAR-72-6] N72-19028
Simulation of wind, system data rate, and contingency event variables during steep descent of vertical lift aircraft under instrument conditions to determine pilot performance [AD-734702] N72-19051
Operational evaluation of portable scanning beam guidance system for improved instrument landing capability [FAA-RD-72-26] N72-19720

AIRCRAFT MAINTENANCE
Aircraft maintenance and reliability monitoring and control on scheduled airlines, considering component failure rate and mode analysis, sampling inspection and remedial action A72-22901
C-5A Galaxy aircraft systems and components maintainability program A72-23851
Corrosion resistant fabrication methods in jumbo jetliners components to reduce maintenance and repair downtime, discussing clad wing and fuselage skins A72-24025
Aircraft scheduled maintenance, discussing turbine engine and component reliability protection, controlled overhaul, test and repair A72-24867
Aircraft maintenance optimization, considering safety, reliability, punctuality and cost factors A72-25108
Development of maintenance quality audit program and application to maintenance of commercial aircraft N72-18015
Responsibilities of fixed base operators regarding aircraft inspection N72-18016
Aircraft design, safety, reliability, and maintenance N72-18018
Development of procedures for conducting structural inspection program on DC-10 aircraft to reduce effects of crack propagation with increased service life N72-18019
Proceedings of International Aviation Maintenance Symposium discussion on jet engine maintenance planning and experience N72-18020
Effect of maintenance procedures on causes of aircraft accidents and statistical analysis of improved aircraft safety through elimination of maintenance faults N72-18021
Organization and operation of Federal Aviation Administration Maintenance Analysis Center N72-18022
Chromate rinse for aircraft exposed to corrosive salt water environments [AD-732762] N72-18503
Relating avionics maintenance to aviation safety N72-19015
Applying systems analysis techniques to aircraft maintenance to achieve aviation safety N72-19017
Development of integrated system for performing checkout of space launchers and aircraft systems N72-19489

AIRCRAFT MODELS
State sensitivity functions in aircraft parameter identification for lateral dynamics under aileron deflection from model response and in-flight test data A72-23807
Wind tunnel investigation of Reynolds number effects on boundary layer separation incidence and maximum lift coefficient of high-lift device equipped aircraft model A72-24657
Magnetic simulation of gravity for wind tunnel investigations of aircraft jettison processes, considering Froude number and relationships between model and full scale aircraft A72-24775

AIRCRAFT NOISE

- Flight tests to determine methods for reducing airport community noise based on operationally optimum approach profiles
[NASA-CR-114417] N72-18001
- Design and development of F-15 fighter aircraft and analysis of effects of aircraft operation on air pollution and noise
[PB-201710-P] N72-18034
- Aviation noise evaluations and projections for San Francisco Bay region
[PB-204035] N72-18035
- Improving intelligibility of voice communication in high acoustic noise environments as exists inside helicopters
[AD-733431] N72-18171
- Vortex shredding noise characteristics of isolated airfoils in Reynolds number range applicable to full scale helicopter rotors
[AD-734433] N72-19048

AIRCRAFT PERFORMANCE

- Fixed wing agricultural aircraft, comparing different designs in terms of performance, safety, handling and economic efficiency
A72-22940
- Airfoil ram-wing air-water hybrid vehicle X-113 Aa design and operational principles based on aerodynamic ground effect, discussing flight tested performance characteristics
A72-22971
- Wind tunnel tests to determine aerodynamic characteristics of vertical takeoff jet fighter aircraft with six jet engines in transition speed range
[NASA-TM-X-2060] N72-18007
- Computerized system for numerical analysis of carrier aircraft
[AD-732755] N72-18030
- Application of differential games technique to determine aircraft propulsion versus engagement parameters
[AD-731578] N72-18046
- Flight test method for determination of stability and performance characteristics from maneuvers in low and intermediate frequencies
[VTH-163] N72-19009
- Evaluation of takeoff and landing performance of commercial STOL airplanes
[NASA-TT-P-14166] N72-19023
- Analysis of factors involved in performance and environmental testing of military aircraft
[AD-734850] N72-19054

AIRCRAFT PILOTS

- Causes of compression fractures and resumption of duties by Greek pilots after recovery
N72-19149

AIRCRAFT PRODUCTION

- Legal aspects of international cooperation on aircraft design and production, discussing work distribution, project management and liabilities sharing
A72-24881

AIRCRAFT RELIABILITY

- Aircraft maintenance and reliability monitoring and control on scheduled airlines, considering component failure rate and mode analysis, sampling inspection and remedial action
A72-22901
- Commercial aircraft reliability program development from informal continuous product improvement to formalized methods based on reliability logic diagrams and probability calculations
A72-24019
- Aircraft scheduled maintenance, discussing turbine engine and component reliability protection, controlled overhaul, test and repair
A72-24867
- Aircraft maintenance optimization, considering safety, reliability, punctuality and cost factors
A72-25108
- Aviation safety measures for aircraft reliability and flight control
N72-18017
- Helicopter design for improving crash survivability of aircraft and occupants
N72-19141

AIRCRAFT SAFETY

- Collision avoidance systems requirements and criteria, evaluating Eros time frequency and

Secant interrogation-and-reply systems

- A72-22822
- Runway fog dispersal system based on underground installed flight-discarded turbojet engines, discussing system efficiency and economics
A72-22910
- Fixed wing agricultural aircraft, comparing different designs in terms of performance, safety, handling and economic efficiency
A72-22940
- Aircraft collision near misses under IFR and VFR conditions, discussing ATC coordination, equipment failure and personal and planning problems
A72-22972
- Book on general aviation safety covering statistical accident records, accident analysis, crashworthiness, preventive measures, etc
A72-23750
- Aircraft maintenance optimization, considering safety, reliability, punctuality and cost factors
A72-25108
- Aircraft design, safety, reliability, and maintenance
N72-18018
- Effect of maintenance procedures on causes of aircraft accidents and statistical analysis of improved aircraft safety through elimination of maintenance faults
N72-18021
- Development of method for determining ramp altitude clearance of aircraft approaching aircraft carrier for landing and identification of unsafe situation
[AD-732760] N72-18032
- Design criteria for safety factors in aircraft crash survival
[AD-733358] N72-18038
- Clear air turbulence radiometric detection program for alerting aircraft
[AD-733762] N72-18641
- Flight tests of VHF omnirange navigation system to determine maximum fix distances for safe approaches and equipment required for safe weather operations
[FAA-PS-600-4] N72-18651
- Analysis of inertial navigation system performance to determine effects on aircraft safety and collision avoidance during flight over North Atlantic Ocean
[AD-733753] N72-18670
- Development of collision risk model to analyze effects of separation standards on aircraft safety during parallel tracking operations in North Atlantic Ocean
[AD-733754] N72-18671
- Relating avionics maintenance to aviation safety
N72-19015
- Applying systems analysis techniques to aircraft maintenance to achieve aviation safety
N72-19017

AIRCRAFT STABILITY

- Nonlinear longitudinal aerodynamic characteristics effect on rigid aircraft response to normal acceleration due to atmospheric turbulence, using power spectral technique
A72-23461
- Pitching moments effect on phugoid and height mode stability of aircraft in supersonic flight
A72-23622
- Mathematical wind gust model for computer simulation of aircraft aerodynamic stability
[AD-733905] N72-18648
- Flight test method for determination of stability and performance characteristics from maneuvers in low and intermediate frequencies
[VTH-163] N72-19009
- Determining stability and control derivatives of airplanes from flight data using modified Newton-Raphson minimization technique
[NASA-TN-D-6579] N72-19659

AIRCRAFT STRUCTURES

- Heat treatment and machining for distortion control of large Al alloy forgings for DC 10 aircraft
A72-22476
- Automatic riveting machine for fuel tight aircraft structures, describing process technique and machine design details and features
A72-22906
- Corrosion resistant fabrication methods in jumbo jetliners components to reduce maintenance and

- repair downtime, discussing clad wing and fuselage skins
A72-24025
- Structural Acoustic Monitor system for airframe structural proof testing, providing multichannel recording and aural monitoring of acoustic data derived from aircraft mounted accelerometers
A72-24146
- Weight estimation and analysis of major structural components of hypersonic, liquid hydrogen fueled aircraft
[NASA-TN-D-6692] N72-18911
- Wind tunnel tests to determine static stability and control characteristics of flexible aircraft
[NASA-TN-D-6656] N72-19001
- Survey and analysis of application of nondestructive inspection methods to aircraft structures
[AGARD-R-587-71] N72-19541
- AIRCRAFT WAKES**
- Flight test investigation of effect of wing tip vortices generated by large jet transport aircraft when intersected by smaller general aviation type aircraft
[NASA-TN-D-6655] N72-18003
- AIRFIELD SURFACE MOVEMENTS**
- Anthropotechnical aspects of aircraft taxiing guidance in airfield runway areas, suggesting computerized operational system
A72-22779
- ICAO standardized taxiing guidance and airports surface traffic control procedures
A72-24171
- AIRFOIL PROFILES**
- Airfoil contour design as envelope of family of circles with centers lying on mean camber line
A72-22298
- Low speed wind tunnel test on low-drag airfoil at half a million Reynolds number, noting aerodynamic coefficients
[ARC-CP-1187] N72-19033
- AIRFOILS**
- Static pressure tube calibration for surface pressure measurements in flow over flat plate and airfoil
A72-22937
- Airfoil ram-wing air-water hybrid vehicle X-113 Am design and operational principles based on aerodynamic ground effect, discussing flight tested performance characteristics
A72-22971
- Aerodynamic noise produced by gas jet flow around airfoil, discussing sound reduction
A72-24107
- Aerodynamic forces calculation for constant vortex shear flows around airfoil fixed between rectilinear walls, noting resultant perpendicularity to Ox axis
A72-24115
- Analysis of boundary layer flow processes during airfoil dynamic stall and design of airfoil to delay onset of dynamic stall
[AD-734699] N72-19012
- Vortex shredding noise characteristics of isolated airfoils in Reynolds number range applicable to full scale helicopter rotors
[AD-734433] N72-19048
- Visualization of unsteady flow around oscillating airfoils and rotary wings, and within turbomachines in hydraulic tunnels
[ONERA-NT-180] N72-19329
- AIRFRAME MATERIALS**
- Thin wall airframe wire insulation relative thermal life and temperature rating evaluation procedure using Arrhenius plot
A72-23270
- AIRFRAMES**
- Statistical evaluation of welded airframe component fatigue damage increment during cyclic loading with constant force amplitude
A72-24922
- Computer program for calculation of airborne store loads, shears, and moments
[AD-733673] N72-17995
- Application of fracture mechanics to design, analysis, and qualification of aircraft structural systems
[AD-731565] N72-18045
- Evaluation of bearing materials, shaft materials, and lubricants for airframe applications by simulating loads, motions, and temperatures on bearings in normal operation
[AD-733705] N72-18505
- Evaluation of steady-state and nonsteady-state methods for measuring panel damping with emphasis on use of random process techniques and digital data reduction methods
[NASA-CR-114423] N72-18909
- AIRLINE OPERATIONS**
- British regional airports development, discussing terminal facilities for scheduled and nonscheduled air carriers on domestic and international routes
A72-24170
- Flight safety standards and air traffic control problems of supersonic aircraft passenger service
[NASA-TT-F-13952] N72-18000
- Economic analysis of effect of fog on air traffic and benefits of fog dispersal capability in terminal area
[AD-735132] N72-19722
- AIRPORT BEACONS**
- Radiation patterns and transmitter power needed for two-bay antenna used with VOR approach marker beacon
[FAA-BD-72-33] N72-18659
- AIRPORT PLANNING**
- Optimal high capacity runway systems for major airports, discussing multiple systems in anticipation of future mass air traffic requirements
A72-24169
- British regional airports development, discussing terminal facilities for scheduled and nonscheduled air carriers on domestic and international routes
A72-24170
- AIRPORTS**
- Turbulence measurement, reporting and subsequent data handling by upgraded ATC system, suggesting A and B program to evaluate wake turbulence effects on airport capacity
A72-23466
- Airport meteorological instrumentation, discussing ground wind, visibility, cloud height, air temperature and humidity detectors and radar equipment
A72-25093
- Flight tests to determine methods for reducing airport community noise based on operationally optimum approach profiles
[NASA-CR-114417] N72-18001
- Jet aircraft noise pollution in airport vicinity
N72-19031
- Air pollution source inventory for ground operations at airports
[AD-733111] N72-19298
- ALIGNMENT**
- Mark 7 arresting engine alignment measuring system and procedures for correcting misalignment
[AD-732445] N72-18272
- ALTIMETERS**
- Causes of altimeter errors
N72-19016
- ALUMINUM**
- Polishes and corrosion removers for aluminum surfaces of Naval aircraft
[AD-733403] N72-18602
- ALUMINUM ALLOYS**
- Heat treatment and machining for distortion control of large Al alloy forgings for DC 10 aircraft
A72-22476
- Random sequence fatigue tests of aluminum alloy box beams in unidirectional bending
[AD-734393] N72-19932
- AMPHIBIOUS AIRCRAFT**
- Influence of aerodynamic characteristics on handling of amphibious hovercraft
[CRANFIELD-AERO-7] N72-17992
- AMPLITUDE MODULATION**
- Analysis of incompatibility between ground and airborne measurements of VOR space modulation when using flight inspection receiver
[FAA-WA-72-18] N72-18649
- ANALOG DATA**
- Surface acoustic wave technology in communication systems, discussing analog and digital matched filters and navigation, ATC and collision avoidance applications
A72-24940

ANALOG TO DIGITAL CONVERTERS

Ground station data reduction equipment for airborne analog and digital magnetic tape data acquisition system

[ARL/ME-130] N72-19238

ANGLE OF ATTACK

Supersonic flow around thin cruciform wing with antisymmetrical angle of attack distribution and horizontal plane with leading edge, considering flow separation at edges

A72-25118

Integration method to derive angle of pitch, flight-path angle, and angle of attack from measurements in nonsteady flight

[VIR-156] N72-19008

Equations for angles of attack and sideslip relative to rolling and nonrolling axis system

[NASA-TN-X-2514] N72-19721

ANGULAR CORRELATION

Correlation functions for angular vibrations of operating aerial camera during working cycle

A72-22947

ANGULAR VELOCITY

Flight vehicle angular velocity measurement by accelerometers, deriving equations of motion

A72-24497

Slender wings in roll noting dependence of rolling moment and roll damping on angular velocity and angle of attack

N72-19004

ANNULAR FLOW

Intercomponent complex annular ducts design for gas turbine engines

A72-23872

ANNULAR NOZZLES

Low speed performance and boundary layer growth in optimal annular diffuser with uniform center body diameter and conically diverging wall

A72-23856

Turbulent boundary layer growth measurement on annular diffuser containing free vortex swirl

A72-23857

ANTENNA ARRAYS

Radiation patterns from adaptive loop antenna arrays for aircraft communication systems

[AD-735096] N72-19230

ANTENNA RADIATION PATTERNS

Radiation patterns and transmitter power needed for two-bay antenna used with VOR approach marker beacon

[FAA-RD-72-33] N72-18659

Radiation patterns from adaptive loop antenna arrays for aircraft communication systems

[AD-735096] N72-19230

ANTI-AIRCRAFT MISSILES

Evaluation of thrust magnitude control for bomber defense missiles

[AD-731812] N72-18788

ANTI-FRICTION BEARINGS

Evaluation of bearing materials, shaft materials, and lubricants for airframe applications by simulating loads, motions, and temperatures on bearings in normal operation

[AD-733705] N72-18505

APPROACH

Flight tests of low lift to drag ratio approach and landing using CV 990 aircraft with similar size and performance characteristics of proposed space shuttle vehicle

[NASA-TN-D-6732] N72-19022

APPROACH CONTROL

Flight tests of VHF omnirange navigation system to determine maximum fix distances for safe approaches and equipment required for safe weather operations

[FAA-FS-600-4] N72-18651

ARMED FORCES (UNITED STATES)

Models of information exchange and data rates for post-1975 automated tactical air control system deployment

[AD-733584] N72-18665

Effects of Q forces on injuries during ejection/extraction escape in USAF

N72-19144

ARRESTING GEAR

Mark 7 arresting engine alignment measuring system and procedures for correcting misalignment

[AD-732445] N72-18272

Fatigue testing of mechanical cables for arresting gears

[AD-733988] N72-18273

ARTIFICIAL GRAVITY

Development of magnetic artificial gravity test facility for use in wind tunnel tests to simulate separation of external stores from aircraft in flight

[NASA-CR-1955] N72-19000

ASPECT RATIO

Experimental study of effect of blade aspect ratio on performance of axial flow compressors

[ARC-CP-1179] N72-19331

ASTRONAUTICS

Heat transfer research review, discussing gas turbines, aeronautics, astronautics, nuclear power, thermal pollution and controlled fusion challenges

A72-23684

ATLANTIC OCEAN

Analysis of inertial navigation system performance to determine effects on aircraft safety and collision avoidance during flight over North Atlantic Ocean

[AD-733753] N72-18670

Development of collision risk model to analyze effects of separation standards on aircraft safety during parallel tracking operations in North Atlantic Ocean

[AD-733754] N72-18671

ATMOSPHERIC TEMPERATURE

Horizontal temperature variations relation to stratospheric CAT based on U-2 flight data

A72-22438

ATMOSPHERIC TURBULENCE

Small scale atmospheric turbulence measurement with airborne hot-wire anemometer, discussing optimal choice of experimental parameters

A72-22435

Nonlinear longitudinal aerodynamic characteristics effect on rigid aircraft response to normal acceleration due to atmospheric turbulence, using power spectral technique

A72-23461

Turbulence measurement, reporting and subsequent data handling by upgraded ATC system, suggesting R and D program to evaluate wake turbulence effects on airport capacity

A72-23466

Derivation of cross-spectral functions for vertical and longitudinal components of two dimensional gust field

[NASA-CR-2011] N72-19029

AUTOMATIC CONTROL

Effectiveness evaluation of automatic spin prevention system for fighter aircraft

[NASA-TN-D-6670] N72-18012

AUTOMATIC FLIGHT CONTROL

Development trends in airborne man machine flight control, discussing optimal division between human pilot and machine in relation to total system performance and economic factors

A72-22781

Optimal solutions for apportionment between automatic and manual flight control, considering number and types of displays required

A72-22783

DC 10 aircraft automatic flight guidance system, noting dual-dual fail-passive autoland

A72-23448

Automated navigation management in cockpit, considering modular navigation /MONA/ dual channel system of L-1011 TriStar

A72-23450

AUTOMATIC PILOTS

Simulation of PA-30 Comanche light aircraft performance and autopilot operation during final approach configuration

[AD-733757] N72-18043

AUTOMATION

Automation in planning and execution of flights, considering navigation, communication, flight instruments monitoring, control/stabilization and warning systems

A72-22780

Optical image filtering to simplify and facilitate automatic aerial photointerpretation processes

A72-23310

AUTOROTATION

Electronics and data processing technology effects on radar state of art, discussing automated air traffic control surveillance systems

A72-24490

AUTOROTATION

Articulated autorotor decelerator for retarding and stabilizing air delivered stores

N72-19041

AVIONICS

Sailplane computer displaying rate of climb simultaneously with airspeed for pilot determination of best strategy for local upcurrent-downcurrent conditions

A72-23550

Reliable interconnections for U.S. Army avionics, determining best technique for terminating flat conductor cables with electrical connectors

A72-24012

Avionics systems electrical interface connection design information document creation and dissemination, using EMPRENT computer program

A72-24864

RCA SECANT aircraft collision avoidance system avionics design using nonsynchronous techniques

A72-24866

Bell lifting rotor systems, examining company contributions in electronics and avionics

A72-24877

Operational aviation meteorological requirements, reviewing aircraft categories, ATC systems and avionics and navigational aids

A72-25078

Design and development of military helicopter cockpit for use in search and rescue missions

N72-18036

Relating avionics maintenance to aviation safety

N72-19015

AXIAL FLOW

Design and experimental performance of 20-inch diameter, tandem bladed, axial flow, transonic compressor rotor for advanced air breathing engines

N72-18773

AXIAL FLOW TURBINES

Aerodynamic efficiency of plane slotted blade cascades of adjustable nozzle diaphragms in transport aircraft axial flow gas turbine engines

A72-23186

Hydraulic tank application to internal flow visualization in turbomachinery, describing test equipment and methods used for axial flow model

A72-24654

Equations of motion of steady viscous fluid flow in three dimensional boundary layer on walls of axial flow compressors and turbines, obtaining velocity field

A72-25120

Computer program for preliminary design analysis of axial flow turbines based on mean-diameter flow analysis

N72-18774

AXISYMMETRIC BODIES

Application of Cooke equivalent radius to boundary layers on axisymmetric bodies at small angle of attack

N72-18293

B

BASE PRESSURE

Base pressure drag reduction on rectangular wings with blunt trailing edges from low speed wind tunnel measurements

A72-24842

BEARINGS

Differential thermal analysis of self lubricating bearing systems

N72-18588

BELL AIRCRAFT

Bell lifting rotor systems, examining company contributions in electronics and avionics

A72-24877

BENDING FATIGUE

Random sequence fatigue tests of aluminum alloy box beams in unidirectional bending

N72-19932

BENDING MOMENTS

Bending response of rotary wing blades when subjected to random input velocities for both

hinged and unhinged cases of root end fixity

[AD-732395] N72-18028

BESSEL FUNCTIONS

Derivation of cross-spectral functions for vertical and longitudinal components of two dimensional gust field

[NASA-CR-2011] N72-19029

BIBLIOGRAPHIES

Air traffic control models and simulations for evaluating traffic flow, safety, and system loading aspects - bibliographies

[AD-733755] N72-18666

Annotated bibliography of US Air Force history

[AD-733892] N72-19037

BIRDS

Search radar monitoring of bird movements to prevent aircraft collision accidents

[AD-732945] N72-18027

Probability of aircraft accidents through collisions with birds

[AD-734803] N72-19049

BLADE TIPS

Contactless measurement of tip clearance in jet engine turbine based on radioactive isotope properties

[AD-734912] N72-19856

BLOWDOWN WIND TUNNELS

Transonic and blowdown-wind tunnels for high Reynolds number testing

[AD-734648] N72-19306

BLOWING

Buccaneer Mk 2 and F-4K Phantom takeoff and landing performance improvement due to boundary layer control by leading and trailing edge blowing

A72-22973

BLUNT BODIES

Wind tunnel investigation of shock impingement caused by boundary layer separation ahead of blunt fins

[RM-536] N72-18285

BODIES OF REVOLUTION

Aerodynamic data acquisition with magnetic balance on wind tunnel model delta and AGARD G wing planforms and body of revolution

A72-24770

BODY-WING AND TAIL CONFIGURATIONS

Simply supported skew plates stability under combined loading, noting wing and tail design applications for high speed aircraft and missiles

A72-24196

BOMBER AIRCRAFT

Titanium-boron-epoxy composite materials selection and fracture mechanics criteria for B-1 bomber structural design

A72-22477

Air and noise environmental pollution from B-1 aircraft

[PB-201711-F] N72-18033

Evaluation of thrust magnitude control for bomber defense missiles

[AD-731812] N72-18788

BOMBS (ORDNANCE)

Aerodynamic characteristics of bomb in steady, incompressible, potential flow based on model

[AD-733325] N72-18037

BORON

Titanium-boron-epoxy composite materials selection and fracture mechanics criteria for B-1 bomber structural design

A72-22477

BOUNDARY LAYER CONTROL

Buccaneer Mk 2 and F-4K Phantom takeoff and landing performance improvement due to boundary layer control by leading and trailing edge blowing

A72-22973

BOUNDARY LAYER FLOW

Low speed performance and boundary layer growth in optimal annular diffuser with uniform center body diameter and conically diverging wall

A72-23856

BOUNDARY LAYER SEPARATION

Wind tunnel investigation of Reynolds number effects on boundary layer separation incidence and maximum lift coefficient of high-lift device equipped aircraft model

A72-24657

Wind tunnel investigation of shock impingement caused by boundary layer separation ahead of blunt fins

- [RM-536] N72-18285
Analysis of boundary layer flow processes during
airfoil dynamic stall and design of airfoil to
delay onset of dynamic stall
[AD-734699] N72-19012
- BOUNDARY LAYER TRANSITION**
Laminar/turbulent boundary layer transition on
parabolic wing profile in supersonic wind tunnel,
noting critical Reynolds number increase with
leading edge thickness A72-22407
- BOUNDARY LAYERS**
Centrifugal turboengine diffuser with high
enlargement area compared with logarithmic spiral
types, discussing boundary layers, secondary flow,
shapes and aerodynamic parameters A72-23747
[AD-731566] N72-17998
Application of Cooke equivalent radius to boundary
layers on axisymmetric bodies at small angle of
attack [TAE-131] N72-18293
Catalog of devices and techniques for boundary layer
and wake measurements on flight vehicles
[NASA-CR-116776] N72-18424
- BOX BEAMS**
Random sequence fatigue tests of aluminum alloy box
beams in unidirectional bending
[AD-734393] N72-19932
- BUCCANEER AIRCRAFT**
Buccaneer Mk 2 and F-4K Phantom takeoff and landing
performance improvement due to boundary layer
control by leading and trailing edge blowing
A72-22973
- BURNTHROUGH (FAILURE)**
Interpretation of flat plate impingement pressure
and temperature data for jet engine combustor
burnthrough flames
[AEROCHEM-TP-261] N72-18953
- C**
- C-5 AIRCRAFT**
C-5A Galaxy aircraft systems and components
maintainability program A72-23851
- CABLES**
Gas chromatography-mass spectrometry analysis of
gaseous products arising from commercial aircraft
cable coating pyrolysis
[RAE-TR-71134] N72-19636
- CABLES (ROPES)**
Fatigue testing of mechanical cables for arresting
gears [AD-733988] N72-18273
- CADMIUM ALLOYS**
Cd-Te photodetectors for high temperature infrared
detectors of aircraft engine fires
[AD-734785] N72-19536
- CALIBRATING**
Capacitive electret pressure sensors calibration for
interior measurements in turbine engines, jets and
exhaust nozzles [ONERA, TP NO. 982] A72-22815
Static pressure tube calibration for surface
pressure measurements in flow over flat plate and
airfoil A72-22937
System methodology application to filter design for
inertial reference unit calibration in digital
test station for FB-111 aircraft navigation system
A72-23820
- CALIFORNIA**
Aviation noise evaluations and projections for San
Francisco Bay region
[PB-204035] N72-18035
Survey of runway pavement condition at US Naval Air
Station, Imperial Beach, California
[AD-733656] N72-19304
Dynamic simulation of air traffic operations in San
Francisco area to determine traffic capacity
[AD-727756] N72-19724
- CAMERAS**
Correlation functions for angular vibrations of
operating aerial camera during working cycle
A72-22947
- CARET WINGS**
Free flight measurement of blunt leading edge caret
wing pressure and heat transfer at supersonic
speeds [ARC-R/M-3679] N72-19007
- CASCADE FLOW**
Aerodynamic efficiency of plane slotted blade
cascades of adjustable nozzle diaphragms in
transport aircraft axial flow gas turbine engines
A72-23186
- CASTINGS**
Casting instruction manual for steels and aluminum,
magnesium and copper alloys in aeronautical
manufacturing [RAE-LIB-TRANS-1557] N72-18501
- CENTRIFUGAL COMPRESSORS**
Compressible flow measurement and loss prediction in
radial vaneless diffuser in centrifugal
compressor, using hot-wire anemometers A72-23861
FORTRAN program for calculating velocities in
meridional plane of centrifugal compressor
[NASA-TN-D-6701] N72-17988
Analytical correlation of centrifugal compressor
design geometry for maximum efficiency with
specific speed [NASA-TN-D-6729] N72-19002
Diffuser effects on stable operations of centrifugal
compressor stage [AD-730042] N72-19855
- CENTRIFUGAL FORCE**
Rotational, centrifugal and Coriolis force effects
on turbulent boundary layer development,
discussing changes in structure and shear stress
distribution A72-23870
- CERAMICS**
Ceramic fiber reinforced Ni base alloy for gas
turbine blades, improving creep resistance at high
temperatures A72-22396
- CHANNEL FLOW**
Hydrodynamic forces in sinusoidal vibrations of disk
in water channel with toroidal vorticity wake
pattern, applying results to flapping wing
mechanics A72-25129
- CHECKOUT**
System for evaluation of aircraft diagnostic and
inspection equipment performance characteristics
[AD-733283] N72-18041
- CHEMICAL PROPERTIES**
Thermodynamic and chemical properties of JP-4 jet
fuel for 1970 [AD-733352] N72-18764
- CHROMIUM STEELS**
Ar-H microplasma welding of thin Cr steel sheets
with narrow seams for aircraft engines and
precision equipment casings A72-22548
- CIRCULAR SHELLS**
Estimating aeroelastic stability and forced response
characteristics of thin walled, circular
cylindrical shells [AD-733370] N72-17996
- CIVIL AVIATION**
Historical review and present status analysis of
civilian aviation in USSR [AD-734069] N72-19044
Special events of meteorological origin affecting
civil jet aircraft operations obtained from flight
recorders for period Jan. 1966 to Nov. 1968
[ARC-CP-1188] N72-19687
Numerical analysis of flight planning and air
traffic control procedures for civil aviation
[AD-734881] N72-19728
- CLEAR AIR TURBULENCE**
Horizontal temperature variations relation to
stratospheric CAT based on U-2 flight data
A72-22438
Microwave equipment and technology application for
instrument landing, terminal ATC, millimeter wave
CAT detection and satellite communications
A72-24036
Clear air turbulence radiometric detection program
for alerting aircraft [AD-733762] N72-18641
Observations of clear air turbulence in stratosphere
by high altitude subsonic aircraft

CLOUD HEIGHT INDICATORS

SUBJECT INDEX

- [NLL-M-22069-(5828.4F)] N72-19682
- CLOUD HEIGHT INDICATORS**
 Airport meteorological instrumentation, discussing ground wind, visibility, cloud height, air temperature and humidity detectors and radar equipment
 A72-25093
- CLOUDS (METEOROLOGY)**
 Economic analysis of effect of fog on air traffic and benefits of fog dispersal capability in terminal area
 [AD-735132] N72-19722
- COATINGS**
 Coatings for aircraft gas turbine engine corrosion protection and reentry heat shields
 [NASA-TN-X-68007] N72-18578
 Gas chromatography-mass spectrometry analysis of gaseous products arising from commercial aircraft cable coating pyrolysis
 [RAE-TR-71134] N72-19636
- COBALT ALLOYS**
 High temperature Co-base alloy for nuclear, chemical and reentry vehicle applications
 A72-22478
- COCKPITS**
 Design and development of military helicopter cockpit for use in search and rescue missions
 [AD-733375] N72-18036
- COHERENT ACOUSTIC RADIATION**
 Coherent and incoherent structures of aerodynamic noise, analyzing compressor near field and hot jet IR emission source
 [ONERA, TP NO. 983] A72-22816
- COHERENT RADIATION**
 Spatial Fourier transform for wave scattering from rough surfaces
 [AD-734044] N72-19576
- COLLISION AVOIDANCE**
 UFO sighting case history and analysis, discussing bright light approaching on collision course during night instrument flight rules
 A72-22646
 Collision avoidance systems requirements and criteria, evaluating Eros time frequency and Secant interrogation-and-reply systems
 A72-22822
 C-band pulse beacon ranging system for collision avoidance, detailing interrogation, response and system test modes
 A72-22908
 Aircraft collision near misses under IPR and VFR conditions, discussing ATC coordination, equipment failure and personal and planning problems
 A72-22972
 RCA SECANT aircraft collision avoidance system avionics design using nonsynchronous techniques
 A72-24866
 Search radar monitoring of bird movements to prevent aircraft collision accidents
 [AD-732945] N72-18027
 Analysis of inertial navigation system performance to determine effects on aircraft safety and collision avoidance during flight over North Atlantic Ocean
 [AD-733753] N72-18670
 Dynamic simulation procedures to determine interaction between air traffic control system and collision avoidance system
 [FAA-RD-72-10] N72-19719
- COMBINED STRESS**
 Simply supported skew plates stability under combined loading, noting wing and tail design applications for high speed aircraft and missiles
 A72-24196
- COMBUSTION CHAMBERS**
 Characteristics of jets flowing from air entry holes of combustion chamber of gas turbine for jet flow parallel to and normal to primary flow through turbine
 [NAL-TR-227] N72-18279
 Interpretation of flat plate impingement pressure and temperature data for jet engine combustor burnthrough flames
 [AEROCHEM-TP-261] N72-18953
 Effects of radial and circumferential inlet velocity profile distortions on performance of short-length double-annular ram-induction combustor
 [NASA-TN-D-6706] N72-19841
- COMBUSTION PHYSICS**
 Analysis of pollutant emissions from jet aircraft and combustion research for reducing emissions through combustor design and fuel atomization
 [NASA-TN-X-68000] N72-18009
 Ignition characteristics of aircraft fluids impinging on hot surfaces under air flow conditions found during flight
 [AD-734238] N72-19964
- COMMAND AND CONTROL**
 Models of information exchange and data rates for post-1975 automated tactical air control system deployment
 [AD-733584] N72-18665
- COMMERCIAL AIRCRAFT**
 Marchetti SV-20-A twin engine winged commercial/utility helicopter, describing design details, onboard systems and payload accommodations
 A72-22907
 Wing structural weight estimation for civil aircraft preliminary deriving generalized formula based on wing root bending moment for specified flight condition
 A72-22909
 Reliability design for airborne ecological system for jumbo jets, discussing toilet flushing and multiple server queueing model
 A72-23999
 Commercial aircraft reliability program development from informal continuous product improvement to formalized methods based on reliability logic diagrams and probability calculations
 A72-24019
 Aircraft incident report involving DC-9 aircraft contacting surface of ocean near Martha's Vineyard, Massachusetts on 22 June, 1971
 [NTSB-AAR-72-4] N72-18002
 Development of maintenance quality audit program and application to maintenance of commercial aircraft
 N72-18015
 Computer simulation to determine capacity of air terminal for short takeoff and landing intra-urban air rapid transit system
 [AD-733185] N72-18660
 Feasibility of direct current 200 V commercial aircraft electrical power system noting weight comparison with alternating current system
 [ABC-CP-1186] N72-19062
 Aircraft industry survey for analysis of nondestructive inspection methods application to commercial aircraft for 1968 to 1970
 N72-19543
 Gas chromatography-mass spectrometry analysis of gaseous products arising from commercial aircraft cable coating pyrolysis
 [RAE-TR-71134] N72-19636
- COMMUNICATION EQUIPMENT**
 Surface acoustic wave technology in communication systems, discussing analog and digital matched filters and navigation, ATC and collision avoidance applications
 A72-24940
- COMPILERS**
 Computer memory loading, compiler language revisions for military applications, and research and development in aircraft power systems
 [AD-734143] N72-19255
- COMPONENT RELIABILITY**
 Aircraft maintenance and reliability monitoring and control on scheduled airlines, considering component failure rate and mode analysis, sampling inspection and remedial action
 A72-22901
 C-5A Galaxy aircraft systems and components maintainability program
 A72-23851
 Reliability program for SAAB 37 Viggen airborne computer, discussing prototype and components operating tests and failure rates
 A72-23984
 Aircraft scheduled maintenance, discussing turbine engine and component reliability protection, controlled overhaul, test and repair
 A72-24867
- COMPOSITE MATERIALS**
 Titanium-boron-epoxy composite materials selection and fracture mechanics criteria for B-1 bomber structural design

SUBJECT INDEX

CONFERENCES

A72-22477
Development of technique for analysis of instability of glass fiber reinforced plastic panels under axial compression
[AD-734340] N72-19642

COMPOUND HELICOPTERS
Marchetti SV-20-A twin engine winged commercial/utility helicopter, describing design details, onboard systems and payload accommodations
A72-22907

COMPRESSIBLE FLOW
Compressible flow measurement and loss prediction in radial vaneless diffuser in centrifugal compressor, using hot-wire anemometers
A72-23861

COMPRESSIBLE FLUIDS
Book on ideal and real compressible fluid dynamics covering supersonic flow past airfoils and shock wave interaction with laminar boundary layer
A72-23045

COMPRESSIVE STRENGTH
Development of technique for analysis of instability of glass fiber reinforced plastic panels under axial compression
[AD-734340] N72-19642

COMPRESSOR BLADES
Subsonic unsteady aerodynamic pressures on blades of compressor wheel rotating freely in air stream
A72-24854

COMPRESSOR EFFICIENCY
Analytical correlation of centrifugal compressor design geometry for maximum efficiency with specific speed
[NASA-TN-D-6729] N72-19002

COMPRESSOR ROTORS
Design and experimental performance of 20-inch diameter, tandem bladed, axial flow, transonic compressor rotor for advanced air breathing engines
[NASA-TN-X-2484] N72-18773

COMPRESSORS
Coherent and incoherent structures of aerodynamic noise, analyzing compressor near field and hot jet IR emission source
[ONERA, TP NO. 983] A72-22816

COMPUTER COMPONENTS
Reliability program for SAAB 37 Viggen airborne computer, discussing prototype and components operating tests and failure rates
A72-23984

COMPUTER DESIGN
STARAN IV-X associative array processor for automation in ATC environment, considering air tracking, conflict prediction and resolution functions
A72-23818

COMPUTER GRAPHICS
Computer graphic simulation of air transportation system
[AD-733752] N72-18669

COMPUTER PROGRAMMING
Computerized system for numerical analysis of carrier aircraft
[AD-732755] N72-18030

Computerized air traffic control systems
[AD-733759] N72-19247

COMPUTER PROGRAMS
Avionics systems electrical interface connection design information document creation and dissemination, using EMPRENT computer program
A72-24864

FORTRAN program for calculating velocities in meridional plane of centrifugal compressor
[NASA-TN-D-6701] N72-17988

Computer program for calculation of airborne store loads, shears, and moments
[AD-733673] N72-17995

Computer program for determining characteristics of propellers used in general aviation aircraft to include blade shape parameter and integrated design lift coefficient
[NASA-CR-114399] N72-18004

Stability and damping characteristics of tethered balloon systems, using computer programs for IBM 360
[AD-731570] N72-18044

Computer program for preliminary design analysis of axial flow turbines based on mean-diameter flow

analysis
[NASA-TN-D-6702] N72-18774

Computer program for steady state turbojet and turbofan engine cycle calculations
[NASA-TN-D-6552] N72-18783

COMPUTER STORAGE DEVICES
Computer memory loading, compiler language revisions for military applications, and research and development in aircraft power systems
[AD-734143] N72-19255

COMPUTER TECHNIQUES
Partial load computation for axial flow compressor stages, describing computer method limitations
A72-22632

Anthropotechnical aspects of aircraft taxiing guidance in airfield runway areas, suggesting computerized operational system
A72-22779

Hybrid computing techniques in helicopter simulation, taking into account complex dynamic systems nonlinear effects
A72-22936

STARAN IV-X associative array processor for automation in ATC environment, considering air tracking, conflict prediction and resolution functions
A72-23818

COMPUTERIZED DESIGN
Computerized design of axial compressor stage using radial three dimensional equilibrium flow equations
[AD-733437] N72-18507

COMPUTERIZED SIMULATION
ATC systems analysis by computerized real time environmental simulation, taking into account new aircraft types, navigation and supervision aids
A72-22782

Hybrid computing techniques in helicopter simulation, taking into account complex dynamic systems nonlinear effects
A72-22936

Mathematical wind gust model for computer simulation of aircraft aerodynamic stability
[AD-733905] N72-18648

Computer graphic simulation of air transportation system
[AD-733752] N72-18669

Computerized simulation used to obtain time optimal trajectories for P-3C ASW aircraft
[AD-734167] N72-19046

Computerized simulation model for studying performance of air bag
[PB-20417] N72-19184

CONCORDE AIRCRAFT
Glass-vinyl retractable windshield visor development for Concorde aircraft, considering rain, hail and icing effects, strength and stiffness under aerodynamic loading and heating
A72-22900

CONFERENCES
Man and technology in orientation and navigation Conferences, Essen, Germany, October 1971
A72-22776

Nonlinear dynamics of flight vehicle - Conference, University of Technology, Loughborough, England, March 1972
A72-23451

Internal flows - Conference, Salford, England, April 1971
A72-23853

Electromagnetic suspension - Conference, Southampton, England, July 1971
A72-24756

Titles and authors of papers presented at Thirteenth Annual Israel Conference on Aviation and Astronautics - March 1971
[AD-733400] N72-17997

Proceedings of International Aviation Maintenance Symposium discussion on jet engine maintenance planning and experience
N72-18020

Proceedings of conference on Omega navigation system and recommendations for modified hyperbolic navigation system
[NASA-CR-125807] N72-19718

Conference on flow characteristics of turbomachinery
[AD-735021] N72-19858

Conference on helicopter operations in fire fighting
[AD-734078] N72-19986

CONICAL BODIES

SUBJECT INDEX

CONICAL BODIES

Static aerodynamic characteristics of bulbous based cone models and slender wings at subsonic speed, using magnetic suspension and balance system

A72-24769

CONICAL FLOW

Conical diffuser response to velocity distribution and turbulence intensity at inlet

A72-23858

Wide angle conical diffuser performance improvement by conical splitter vanes, considering static pressure recovery

A72-23860

Turbulent shear stress and kinetic energy characteristics of subsonic air flow in straight conical diffuser, using hot-wire anemometry measurements

A72-23862

CONSTRAINTS

Linear and angular acceleration terminology, human acceleration simulation, airplane airbag restraint systems, and mathematical models of automobile crash loads

N72-19155

CONTINUOUS WAVE RADAR

Noncontacting measurements by miniature CW Doppler radar with semiconductor microwave generator

A72-22691

CONTROL EQUIPMENT

Radial vane array for controlling wing tip vortices [ATN-7102]

N72-18026

CONTROL SURFACES

Approximate method for nonlinear differential equations of motion solution in flight dynamics, applying to control surface buzz and slender wing oscillations

A72-23453

CONTROL THEORY

Control synthesis equations for aircraft motion on phase space surface

A72-22208

Optimal control synthesis for linear passive stationary plants with symmetrical coefficient matrices of minimized functional

A72-23431

CONTROLLABILITY

Influence of aerodynamic characteristics on handling of amphibious hovercraft [CRANFIELD-AERO-7]

N72-17992

COOLING SYSTEMS

Design and evaluation of cooling systems for wings on hypersonic cruise vehicles

N72-18010

Water-glycol convective cooling system for Mach 6 hypersonic transport airframe [NASA-CR-1918]

N72-18011

CORIOLIS EFFECT

Rotational, centrifugal and Coriolis force effects on turbulent boundary layer development, discussing changes in structure and shear stress distribution

A72-23870

CORRELATION DETECTION

IR measurement of hot jets turbulence intensity axial and transverse profiles, noting application to sound sources detection

A72-24656

CORROSION PREVENTION

Chromate rinse for aircraft exposed to corrosive salt water environments [AD-732762]

N72-18503

CORROSION RESISTANCE

Corrosion resistant fabrication methods in jumbo jetliners components to reduce maintenance and repair downtime, discussing clad wing and fuselage skins

A72-24025

CORROSION TESTS

Accelerated full scale aircraft turbine engine corrosion tests in controlled environment, simulating salt, high temperature and humidity conditions [NACE PAPER 76]

A72-24320

COST ANALYSIS

Economic analysis of effect of fog on air traffic and benefits of fog dispersal capability in terminal area [AD-735132]

N72-19722

COST EFFECTIVENESS

Aircraft maintenance optimization, considering safety, reliability, punctuality and cost factors

A72-25108

COWLINGS

Macelle cowl of high bypass ratio turbofan engines [AD-733738]

N72-18789

CRASH INJURIES

Aircraft accident injuries and reconstruction from linear impact

N72-19123

Army helicopter accident analysis for defining impact injury problems and helicopter crashworthiness

N72-19129

History of aircraft crash injury studies and facilities for simulation

N72-19150

CRASHES

Linear and angular acceleration terminology, human acceleration simulation, airplane airbag restraint systems, and mathematical models of automobile crash loads

N72-19155

CREEP STRENGTH

Ceramic fiber reinforced Ni base alloy for gas turbine blades, improving creep resistance at high temperatures

A72-22396

CRITICAL VELOCITY

Laminar/turbulent boundary layer transition on parabolic wing profile in supersonic wind tunnel, noting critical Reynolds number increase with leading edge thickness

A72-22407

CRUCIFORM WINGS

Supersonic flow around thin cruciform wing with antisymmetrical angle of attack distribution and horizontal plane with leading edge, considering flow separation at edges

A72-25118

CUMULATIVE DAMAGE

Statistical evaluation of welded airframe component fatigue damage increment during cyclic loading with constant force amplitude

A72-24922

CUSHIONS

Acceleration protection system design, impact testing of restraint harnesses and ejection seat cushions, and implications

N72-19157

CV-990 AIRCRAFT

Flight tests of low lift to drag ratio approach and landing using CV 990 aircraft with similar size and performance characteristics of proposed space shuttle vehicle [NASA-TN-D-6732]

N72-19022

CYCLIC LOADS

Statistical evaluation of welded airframe component fatigue damage increment during cyclic loading with constant force amplitude

A72-24922

CYLINDRICAL SHELLS

Estimating aeroelastic stability and forced response characteristics of thin walled, circular cylindrical shells [AD-733370]

N72-17996

D

DAMPING

Liapunov functional stability analysis in structural dynamics problems including wave equations with nonlinear damping

A72-23457

Stability and damping characteristics of tethered balloon systems, using computer programs for IBM 360 [AD-731570]

N72-18044

Slender wings in roll noting dependence of rolling moment and roll damping on angular velocity and angle of attack

N72-19004

DATA ACQUISITION

Data acquisition and reduction for model aerodynamics in superconducting magnetic suspension and balance of supersonic wind tunnel facility

SUBJECT INDEX

DIGITAL FILTERS

A72-24766
Aerodynamic data acquisition with magnetic balance on wind tunnel model delta and AGARD G wing planforms and body of revolution

A72-24770
Sensors for data acquisition systems for earth observations by spacecraft or aircraft [NASA-TN-X-62107]

N72-18199
Implementation of instrumentation techniques for service testing of aircraft and airborne equipment to meet military requirements [AD-734306]

N72-19300
DATA LINKS
Real time pilot reports via digital ground-air-ground data link, discussing encoding and processing equipment, meteorological codes and automatic real time weather forecasts

A72-25079
DATA MANAGEMENT
Organization and operation of Federal Aviation Administration Maintenance Analysis Center

N72-18022
DATA PROCESSING
Ground based ATC information processing systems analysis, considering controllers work load

A72-22778
Electronics and data processing technology effects on radar state of art, discussing automated air traffic control surveillance systems

A72-24490
Military weather forecasting requirements by 1980, discussing decision making, data processing, satellite data, mission and terminal forecasts, display and computer flight planning

A72-25096
DATA PROCESSING EQUIPMENT
Real time pilot reports via digital ground-air-ground data link, discussing encoding and processing equipment, meteorological codes and automatic real time weather forecasts

A72-25079
Ground station data reduction equipment for airborne analog and digital magnetic tape data acquisition system [ARL/ME-130]

N72-19238
DATA RECORDING
Structural Acoustic Monitor system for airframe structural proof testing, providing multichannel recording and aural monitoring of acoustic data derived from aircraft mounted accelerometers

A72-24146
DC 9 AIRCRAFT
Aircraft incident report involving DC-9 aircraft contacting surface of ocean near Martha's Vineyard, Massachusetts on 22 June, 1971 [NTSB-AAR-72-4]

N72-18002
DC 10 AIRCRAFT
Heat treatment and machining for distortion control of large Al alloy forgings for DC 10 aircraft

A72-22476
DC-10 aircraft structural design, flight handling characteristics and fatigue tests

A72-23446
DC 10 aircraft automatic flight guidance system, noting dual-dual fail-passive autoland

A72-23448
Development of procedures for conducting structural inspection program on DC-10 aircraft to reduce effects of crack propagation with increased service life

N72-18019
DEATH
Psychological autopsy for analyzing immediate psychodynamic processes leading to suicidal aircraft accidents [FAA-AM-72-2]

N72-19020
DECELERATION
Articulated autorotor decelerator for retarding and stabilizing air delivered stores [AD-734309]

N72-19041
DECOMPRESSION SICKNESS
Technique for predicting etiology of decompression sickness in unpressurized aircraft above 20,000 feet [AD-731118]

N72-19106
DEGREES OF FREEDOM
Pod-mounted jet engine follower force instability,

analyzing two degrees of freedom system dynamics

A72-22938
DELTA WINGS
Slender body theory for flow calculation past low aspect ratio delta wing with straight trailing edge, noting lifting vortices distribution

A72-25131
Mathematical model for effects of conical thickness distribution on separated flow past slender delta wings with small thickness/span ratios and sharp leading edges [ARC-CP-1189]

N72-19006
Vortex breakdown studied by flow visualization noting pressure gradient effect and analogy with boundary layer separation and wake bursting [ONERA-NT-175]

N72-19328
DESCENT
Aerodynamic performance of lifting helicopter rotor during vertical descent [AD-734229]

N72-19011
DESCENT TRAJECTORIES
Curved final approach and landing flight path for increased airport capacity [RAE-TR-71059]

N72-18265
DIFFERENTIAL EQUATIONS
Near optimal closed loop control laws for fixed time pursuit-evasion differential game between two aircraft in vertical plane, using dynamic modeling

A72-23805
Application of Cooke equivalent radius to boundary layers on axisymmetric bodies at small angle of attack [TAE-131]

N72-18293
Derivation of differential equations for optimal feedback for constant linear system [VTH-165]

N72-19663
DIFFERENTIAL THERMAL ANALYSIS
Differential thermal analysis of self lubricating bearing systems [AD-732761]

N72-18588
DIFFUSERS
Centrifugal turboengine diffuser with high enlargement area compared with logarithmic spiral types, discussing boundary layers, secondary flow, shapes and aerodynamic parameters

A72-23747
Pressure recovery calculation for subsonic adiabatic air flow through diffusers with tail pipes, assuming turbulent inlet boundary layer

A72-23855
Low speed performance and boundary layer growth in optimal annular diffuser with uniform center body diameter and conically diverging wall

A72-23856
Turbulent boundary layer growth measurement on annular diffuser containing free vortex swirl

A72-23857
Conical diffuser response to velocity distribution and turbulence intensity at inlet

A72-23858
Wind tunnel diffuser design for separated region spread reduction based on egg box principle

A72-23859
Wide angle conical diffuser performance improvement by conical splitter vanes, considering static pressure recovery

A72-23860
Turbulent shear stress and kinetic energy characteristics of subsonic air flow in straight conical diffuser, using hot-wire anemometry measurements

A72-23862
Diffuser effects on stable operations of centrifugal compressor stage [AD-730042]

N72-19855
DIGITAL COMPUTERS
STARAN IV-X associative array processor for automation in ATC environment, considering air tracking, conflict prediction and resolution functions

A72-23818
DIGITAL DATA
Real time pilot reports via digital ground-air-ground data link, discussing encoding and processing equipment, meteorological codes and automatic real time weather forecasts

A72-25079
DIGITAL FILTERS
System methodology application to filter design for

DIGITAL SYSTEMS

- inertial reference unit calibration in digital test station for FB-111 aircraft navigation system
A72-23820
- Surface acoustic wave technology in communication systems, discussing analog and digital matched filters and navigation, ATC and collision avoidance applications
A72-24940
- DIGITAL SYSTEMS**
Turbojet engine test facility with digital system for advanced control and performance studies
[AD-733353] N72-18469
- DIHEDRAL ANGLE**
Velocities induced by distributions of infinite kinked sources and vortex lines representing wings with sweep and dihedral in incompressible flow
[ARC-R/H-3667] N72-19332
- DIMENSIONAL ANALYSIS**
Dimensional analysis in aeronautical engineering including fixed and natural units
[AD-735128] N72-19671
- DIRECT CURRENT**
Feasibility of direct current 200 V commercial aircraft electrical power system noting weight comparison with alternating current system
[ARC-CP-1186] N72-19062
- DIRECTIONAL STABILITY**
Hovercraft internal and external aerodynamic forces, discussing control, suspension, yawing moments, directional and roll stability and random surfaces performances
A72-22824
- DISKS (SHAPES)**
Hydrodynamic forces in sinusoidal vibrations of disk in water channel with toroidal vorticity wake pattern, applying results to flapping wing mechanics
A72-25129
- DISPLAY DEVICES**
Optimal solutions for apportionment between automatic and manual flight control, considering number and types of displays required
A72-22783
- Sailplane computer displaying rate of climb simultaneously with airspeed for pilot determination of best strategy for local upcurrent-downcurrent conditions
A72-23550
- Design and development of military helicopter cockpit for use in search and rescue missions
[AD-733375] N72-18036
- Design and development of six-degree-of-freedom visual approach and landing simulator for training F-105 pilots
[AD-733240] N72-18267
- DISTANCE MEASURING EQUIPMENT**
Low powered distance measuring equipment for terminal facilities
[FAA-WA-72-25] N72-18650
- DISTRICT OF COLUMBIA**
Airport traffic forecasts for Washington, D.C. for 1972 to 1983
N72-19975
- DIVERGENT NOZZLES**
Jet noise suppression by splitting supersonic nozzle flow into separate jets by overexpansion into multilobed divergent nozzle
[NASA-TN-D-6667] N72-17990
- DO-31 AIRCRAFT**
Anthropotechnical aspects of V/STOL aircraft control, discussing instrument and control systems concepts based on development and flight tests of experimental Do-31 VTOL aircraft
A72-22784
- DOCUMENTATION**
Avionics systems electrical interface connection design information document creation and dissemination, using EMPRENT computer program
A72-24864
- DOPPLER EFFECT**
Radar data statistical evaluation, emphasizing mean Doppler shift for aircraft radial velocity calculation
A72-22897
- DOPPLER RADAR**
Noncontacting measurements by miniature CW Doppler radar with semiconductor microwave generator
A72-22691

SUBJECT INDEX

- DRAW REDUCTION**
Base pressure drag reduction on rectangular wings with blunt trailing edges from low speed wind tunnel measurements
A72-24842
- DUCTED FLOW**
Supersonic and subsonic jet flows coexistence in constant section duct, analyzing pressure on walls and in fluid and schlieren visualization
[ONERA, TP NO. 976] A72-22813
- DUCTS**
Intercomponent complex annular ducts design for gas turbine engines
A72-23872
- DYNAMIC CHARACTERISTICS**
Nonlinear dynamic motion response analysis of flight vehicles typified by continuously changing vibration damping and frequency
A72-23452
- DYNAMIC MODELS**
Near optimal closed loop control laws for fixed time pursuit-evasion differential game between two aircraft in vertical plane, using dynamic modeling
A72-23805
- Dynamic simulation of air traffic operations in San Francisco area to determine traffic capacity
[AD-727756] N72-19724
- DYNAMIC STABILITY**
Pod-mounted jet engine follower force instability, analyzing two degrees of freedom system dynamics
A72-22938
- DYNAMIC STRUCTURAL ANALYSIS**
Liapunov functional stability analysis in structural dynamics problems including wave equations with nonlinear damping
A72-23457
- E**
- EARTH ENVIRONMENT**
Air and noise environmental pollution from B-1 aircraft
[PB-201711-F] N72-18033
- ECONOMIC FACTORS**
Development trends in airborne man machine flight control, discussing optimal division between human pilot and machine in relation to total system performance and economic factors
A72-22781
- Fixed wing agricultural aircraft, comparing different designs in terms of performance, safety, handling and economic efficiency
A72-22940
- ECONOMICS**
Book on IATA organization and functions, discussing international aviation history, conference machinery, enforcement of conference resolutions, air transportation economics, public corporations, etc
A72-23846
- EIGENVALUES**
Ground effect wing vehicles stability in forward motion, deriving characteristic equations by linear analysis
A72-24844
- EJECTION**
Performance tests of protective clothing to determine effectiveness against air blast during high speed ejection
N72-19147
- EJECTION INJURIES**
Effects of Q forces on injuries during ejection/extraction escape in USAF
N72-19144
- ELASTIC BODIES**
Random vibration of linearly elastic lumped mass systems containing, nonlinear damping to ideal stationary Gaussian white noise excitation
A72-23460
- ELASTIC DAMPING**
Higher order forces effect on shock absorbing systems of masses interconnected by elastic and damping members of aircraft landing gears
A72-22861
- ELECTRETS**
Capacitive electret pressure sensors calibration for interior measurements in turbine engines, jets and exhaust nozzles
[ONERA, TP NO. 982] A72-22815

SUBJECT INDEX

EXHAUST GASES

ELECTRIC BATTERIES

Design, development, and evaluation of electric storage batteries used for aircraft power supplies [AD-733289] N72-18057

ELECTRIC CONNECTORS

Reliable interconnections for U.S. Army avionics, determining best technique for terminating flat conductor cables with electrical connectors A72-24012

ELECTRIC ENERGY STORAGE

Design, development, and evaluation of electric storage batteries used for aircraft power supplies [AD-733289] N72-18057

ELECTRIC FILTERS

Design and performance of filter resonators for helicopter noise reduction [AD-734812] N72-19222

ELECTRIC GENERATORS

Feasibility of direct current 200 V commercial aircraft electrical power system noting weight comparison with alternating current system [ARC-CP-1186] N72-19062

ELECTRIC WIRE

Thin wall airframe wire insulation relative thermal life and temperature rating evaluation procedure using Arrhenius plot A72-23270

Avionics systems electrical interface connection design information document creation and dissemination, using EMPRENT computer program A72-24864

ELECTRICAL INSULATION

Thin wall airframe wire insulation relative thermal life and temperature rating evaluation procedure using Arrhenius plot A72-23270

ELECTROMAGNETIC MEASUREMENT

Electromagnetic position sensor for magnetically supported model in wind tunnel, discussing design, operation principles and performance A72-24773

ELECTROMAGNETS

Electromagnetic suspension - Conference, Southampton, England, July 1971 A72-24756

ELECTRONIC EQUIPMENT

Electronics and data processing technology effects on radar state of art, discussing automated air traffic control surveillance systems A72-24490

Development and characteristics of microelectronic equipment for improved reliability and reduced weight and size of electronic components N72-19484

ELECTRONICS

Bell lifting rotor systems, examining company contributions in electronics and avionics A72-24877

EMISSION SPECTRA

High resolution observation of stratospheric submillimeter thermal emission spectrum by helium-cooled InSb electron bolometer on board Comet 2E aircraft A72-25023

ENERGY DISSIPATION

Secondary losses reduction procedure in axial flow turbine stages, using boundary layer fences on blades profile suction side A72-22634

ENERGY REQUIREMENTS

Radiation patterns and transmitter power needed for two-bay antenna used with VOR approach marker beacon [FAA-RD-72-33] N72-18659

ENERGY SOURCES

Computer memory loading, compiler language revisions for military applications, and research and development in aircraft power systems [AD-734143] N72-19255

ENGINE CONTROL

Transient characteristics and steady state off-design operation of mixed and unmixed type turbofan engines, noting peculiarities in control characteristics A72-22626

Optimal control of two shaft gas turbine engine in helicopter, using cybernetic equipment A72-22862

ENGINE DESIGN

Intercomponent complex annular ducts design for gas turbine engines A72-23872

STOL and V/STOL transport aircraft design requirements consideration based on common propulsion and lift engine types use, noting fan lift solution superiority A72-24865

ENGINE TESTS

Accelerated full scale aircraft turbine engine corrosion tests in controlled environment, simulating salt, high temperature and humidity conditions [NACE PAPER 76] A72-24320

ENGINES

Mark 7 arresting engine alignment measuring system and procedures for correcting misalignment [AD-732445] N72-18272

ENVIRONMENT POLLUTION

Environmental impact of NASA Flight Research Center, Edwards, California [PB-202054-P] N72-19027

ENVIRONMENT SIMULATION

ATC systems analysis by computerized real time environmental simulation, taking into account new aircraft types, navigation and supervision aids A72-22782

ENVIRONMENTAL ENGINEERING

Sonic boom research facilities and techniques, emphasizing applicability to other environmental problems A72-23317

ENVIRONMENTAL TESTS

Field and laboratory sonic boom simulators, noting required characteristics A72-23323

Development of methods for conducting climatic tests with emphasis on design, construction, and operation of climatic hangar [AD-733299] N72-18268

Environmental tests to determine behavior of titanium alloys under hot salt, stress corrosion conditions existing in jet engines [NASA-TN-X-68015] N72-18541

EQUATIONS OF MOTION

Control synthesis equations for aircraft motion on phase space surface A72-22208

Approximate method for nonlinear differential equations of motion solution in flight dynamics, applying to control surface buzz and slender wing oscillations A72-23453

Flight vehicle angular velocity measurement by accelerometers, deriving equations of motion A72-24497

Equations of motion of steady viscous fluid flow in three dimensional boundary layer on walls of axial flow compressors and turbines, obtaining velocity field A72-25120

EQUATIONS OF STATE

State sensitivity functions in aircraft parameter identification for lateral dynamics under aileron deflection from model response and in-flight test data A72-23807

EQUIPMENT SPECIFICATIONS

Development of methods for conducting climatic tests with emphasis on design, construction, and operation of climatic hangar [AD-733299] N72-18268

ERROR ANALYSIS

Causes of altimeter errors N72-19016

ESCAPE SYSTEMS

Effects of Q forces on injuries during ejection/extraction escape in USAF N72-19144

ESTIMATES

Probability estimates of aircraft encounters with hail, discussing variations with locality, hailstone size and height and supersonic transport experience A72-23423

EXHAUST GASES

Analysis of pollutant emissions from jet aircraft and combustion research for reducing emissions

EXHAUST NOZZLES

SUBJECT INDEX

through combustor design and fuel atomization
[NASA-TN-X-68000] N72-18009

Design and development of F-15 fighter aircraft and
analysis of effects of aircraft operation on air
pollution and noise
[PB-201710-F] N72-18034

Hydrocarbons, carbon monoxide, carbon dioxide, and
nitrogen oxides in gaseous emissions from limited
sample of military and commercial aircraft turbine
engines
[PB-204177] N72-19968

Exhaust measurement from five aircraft piston
engines
[PB-204196] N72-19969

EXHAUST NOZZLES

Capacitive electret pressure sensors calibration for
interior measurements in turbine engines, jets and
exhaust nozzles
[ONERA, TP NO. 982] A72-22815

EXPERIMENTAL DESIGN

Development of methods for conducting climatic tests
with emphasis on design, construction, and
operation of climatic hangar
[AD-733299] N72-18268

EXTERNAL STORES

Computer program for calculation of airborne store
loads, shears, and moments
[AD-733673] N72-17995

Development of magnetic artificial gravity test
facility for use in wind tunnel tests to simulate
separation of external stores from aircraft in
flight
[NASA-CR-1955] N72-19000

EXTREME VALUES

Pressure jumps lower bounds across supersonic
transports induced shock waves in homogeneous
atmosphere, using Whitham function in terms of
Riemann integral
A72-24846

F

F-105 AIRCRAFT

Design and development of six-degree-of-freedom
visual approach and landing simulator for training
F-105 pilots
[AD-733240] N72-18267

F-111 AIRCRAFT

Flight test analysis of flow characteristics of air
intake system of F-111A aircraft at supersonic
speed
[NASA-TN-D-6679] N72-18996

F-15 AIRCRAFT

Design and development of F-15 fighter aircraft and
analysis of effects of aircraft operation on air
pollution and noise
[PB-201710-F] N72-18034

F-4 AIRCRAFT

Buccaneer Mk 2 and F-4K Phantom takeoff and landing
performance improvement due to boundary layer
control by leading and trailing edge blowing
A72-22973

FABRICATION

Corrosion resistant fabrication methods in jumbo
jetliners components to reduce maintenance and
repair downtime, discussing clad wing and fuselage
skins
A72-24025

FAIL-SAFE SYSTEMS

DC 10 aircraft automatic flight guidance system,
noting dual-dual fail-passive autoland
A72-23448

FAILURE ANALYSIS

Applying systems analysis techniques to aircraft
maintenance to achieve aviation safety
N72-19017

FAN IN WING AIRCRAFT

Fan and wing force data on wind tunnel model of VTOL
lift fan in two dimensional wing, with and without
exit louvers
[NASA-TN-D-6654] N72-18775

FATIGUE TESTS

DC-10 aircraft structural design, flight handling
characteristics and fatigue tests
A72-23446

Statistical evaluation of welded airframe component
fatigue damage increment during cyclic loading
with constant force amplitude
A72-24922

Fatigue testing of mechanical cables for arresting
gears
[AD-733988] N72-18273

Random sequence fatigue tests of aluminum alloy box
beams in unidirectional bending
[AD-734393] N72-19932

FEASIBILITY

Feasibility of direct current 200 V commercial
aircraft electrical power system noting weight
comparison with alternating current system
[ARC-CP-1186] N72-19062

FEEDBACK

Derivation of differential equations for optimal
feedback for constant linear system
[VTR-165] N72-19663

FEEDBACK CONTROL

Near optimal closed loop control laws for fixed time
pursuit-evasion differential game between two
aircraft in vertical plane, using dynamic modeling
A72-23805

FIGHTER AIRCRAFT

Effectiveness evaluation of automatic spin
prevention system for fighter aircraft
[NASA-TN-D-6670] N72-18012

Longitudinal stability and control derivatives of
jet fighter aircraft extracted from flight test
data by utilizing maximum likelihood estimation
[NASA-TN-D-6532] N72-18013

Application of differential games technique to
determine aircraft propulsion versus engagement
parameters
[AD-731578] N72-18046

Onboard aircraft and missile radar systems for
interception of airborne targets
N72-18158

FIRE FIGHTING

Conference on helicopter operations in fire fighting
[AD-734078] N72-19986

FIREES

Cd-Te photodetectors for high temperature infrared
detectors of aircraft engine fires
[AD-734785] N72-19536

FIXED WINGS

Design and evaluation of cooling systems for wings
on hypersonic cruise vehicles
[NASA-CR-1916] N72-18010

FLAMMABILITY

Ignition characteristics of aircraft fluids
impinging on hot surfaces under air flow
conditions found during flight
[AD-734238] N72-19964

FLAPS (CONTROL SURFACES)

Noise suppression capability of mixer nozzle used
with externally blown flap augmentation system on
STOL aircraft
[NASA-TN-X-68021] N72-18014

FLAT CONDUCTORS

Reliable interconnections for U.S. Army avionics,
determining best technique for terminating flat
conductor cables with electrical connectors
A72-24012

FLAT PLATES

Static pressure tube calibration for surface
pressure measurements in flow over flat plate and
airfoil
A72-22937

Interpretation of flat plate impingement pressure
and temperature data for jet engine combustor
burnthrough flames
[AEROCHEM-TP-261] N72-18953

FLEXIBLE BODIES

Wind tunnel tests to determine static stability and
control characteristics of flexible aircraft
[NASA-TN-D-6656] N72-19001

FLIGHT CHARACTERISTICS

DC-10 aircraft structural design, flight handling
characteristics and fatigue tests
A72-23446

Combat jet helicopter maneuverability, considering
aircraft flying characteristics, pilot capability,
flight configuration, altitude and load factor
A72-24923

FLIGHT CONTROL

Aviation safety measures for aircraft reliability
and flight control
N72-18017

Wind tunnel tests to determine effectiveness of
cyclic pitch control on V/STOL aircraft for
longitudinal control during hover and transition

[AD-734237] N72-19039
Wind tunnel tests to determine longitudinal control capability of four propeller, tilt wing aerodynamic configuration with cyclic pitch propellers
[AD-734236] N72-19040
Effect of high temperature hydraulic fluid on operation of control surface servovalves installed on T-38 aircraft
[AD-734259] N72-19042
Application of fluidic pneumatic elements and systems for control of aircraft, missiles, and spacecraft
[AD-734715] N72-19343

FLIGHT HAZARDS
Aircraft incident report involving DC-9 aircraft contacting surface of ocean near Martha's Vineyard, Massachusetts on 22 June, 1971
[NTSB-ACC-72-4] N72-18002
Aircraft accident report of Aero Commander aircraft at Aspen, Colorado on January 22, 1970
[NTSR-ACC-72-1] N72-18029

FLIGHT LOAD RECORDERS
Laboratory simulation of Mach 3 cruise heating on wing structure representative of X-15 aircraft for flight loads measurement
[NASA-TN-D-6749] N72-19922

FLIGHT MECHANICS
Nonlinear dynamics of flight vehicle - Conference, University of Technology, Loughborough, England, March 1972
A72-23451
Nonlinear dynamic motion response analysis of flight vehicles typified by continuously changing vibration damping and frequency
A72-23452
Approximate method for nonlinear differential equations of motion solution in flight dynamics, applying to control surface buzz and slender wing oscillations
A72-23453

FLIGHT PATHS
Curved final approach and landing flight path for increased airport capacity
[RAF-TR-71059] N72-18265
Integration method to derive angle of pitch, flight-path angle, and angle of attack from measurements in nonsteady flight
[VTH-156] N72-19008

FLIGHT PLANS
Automation in planning and execution of flights, considering navigation, communication, flight instruments monitoring, control/stabilization and warning systems
A72-22780
Military weather forecasting requirements by 1980, discussing decision making, data processing, satellite data, mission and terminal forecasts, display and computer flight planning
A72-25096

FLIGHT RECORDERS
Special events of meteorological origin affecting civil jet aircraft operations obtained from flight recorders for period Jan. 1966 to Nov. 1968
[ARC-CP-1188] N72-19687

FLIGHT SAFETY
Flight safety standards and air traffic control problems of supersonic aircraft passenger service
[NASA-TT-F-13952] N72-18000
Aviation safety measures for aircraft reliability and flight control
N72-18017
Impact of inertial navigation on air safety and modeling techniques to assess effects of air traffic control satellite surveillance system
[AD-733758] N72-18667
Helicopter design for improving crash survivability of aircraft and occupants
N72-19141
Dynamic simulation procedures to determine interaction between air traffic control system and collision avoidance system
[FAA-RD-72-10] N72-19719

FLIGHT SIMULATORS
Design and development of six-degree-of-freedom visual approach and landing simulator for training F-105 pilots
[AD-733240] N72-18267

FLIGHT STABILITY TESTS

Integration method to derive angle of pitch, flight-path angle, and angle of attack from measurements in nonsteady flight
[VTH-156] N72-19008
Flight test method for determination of stability and performance characteristics from maneuvers in low and intermediate frequencies
[VTH-163] N72-19009
Flight test of three-axis fluidic stability augmentation system for UH-1 helicopter
[AD-734343] N72-19043

FLIGHT TESTS
Airfoil ram-wing air-water hybrid vehicle X-113 Am design and operational principles based on aerodynamic ground effect, discussing flight tested performance characteristics
A72-22971
Flight testing of automated modular area navigation system for L-1011, describing computer, data storage and control-display units and electronic automatic chart system
A72-24271
Flight tests to determine methods for reducing airport community noise based on operationally optimum approach profiles
[NASA-CR-114417] N72-18001
Longitudinal stability and control derivatives of jet fighter aircraft extracted from flight test data by utilizing maximum likelihood estimation
[NASA-TN-D-6532] N72-18013
Fly by wire and integrated actuator package techniques for developing survivable flight control system in jet aircraft
[AD-733582] N72-18040
Flight tests of strapdown inertial navigation system in helicopter to determine feasibility for simulating systems using inertial navigation equipment
[AD-733430] N72-18663
Flight test analysis of flow characteristics of air intake system of F-111A aircraft at supersonic speed
[NASA-TN-D-6679] N72-18996
Maximum likelihood technique used to extract aerodynamic parameters of Navion airplane from flight data
[NASA-TN-D-6643] N72-19019
Flight tests to determine characteristics of blade slap in rotary wings and effect on helicopter performance
[NASA-CR-1983] N72-19026
Determining stability and control derivatives of airplanes from flight data using modified Newton-Raphson minimization technique
[NASA-TN-D-6579] N72-19659

FLIGHT VEHICLES
Nonlinear dynamics of flight vehicle - Conference, University of Technology, Loughborough, England, March 1972
A72-23451
Nonlinear dynamic motion response analysis of flight vehicles typified by continuously changing vibration damping and frequency
A72-23452
Flight vehicle angular velocity measurement by accelerometers, deriving equations of motion
A72-24497
Catalog of devices and techniques for boundary layer and wake measurements on flight vehicles
[NASA-CR-116776] N72-18424

FLOW CHARACTERISTICS
Slender body theory for flow calculation past low aspect ratio delta wing with straight trailing edge, noting lifting vortices distribution
A72-25131
Computer program for preliminary design analysis of axial flow turbines based on mean-diameter flow analysis
[NASA-TN-D-6702] N72-18774
Transonic and supersonic wind tunnel test data on intake performance of supersonic mixed compression inlet flow
[NASA-CR-1977] N72-18786
Comparison of flow characteristics of two transonic compressors
N72-19852
Conference on flow characteristics of turbomachinery
[AD-735021] N72-19858

FLOW DISTRIBUTION

SUBJECT INDEX

FLOW DISTRIBUTION

Analysis of helicopter rotary wing performance with recirculatory flow visualization during wind tunnel tests
[AD-734873] N72-19352

FLOW EQUATIONS

Characteristics of jets flowing from air entry holes of combustion chamber of gas turbine for jet flow parallel to and normal to primary flow through turbine
[NAL-TR-227] N72-18279
Computerized design of axial compressor stage using radial three dimensional equilibrium flow equations
[AD-733437] N72-18507
Velocities induced by distributions of infinite kinked sources and vortex lines representing wings with sweep and dihedral in incompressible flow
[ARC-R/M-3667] N72-19332

FLOW GEOMETRY

Wide angle conical diffuser performance improvement by conical splitter vanes, considering static pressure recovery
A72-23860

FLOW MEASUREMENT

German monograph on shaft and wall effect in aerodynamic measurements with three orifice pressure probes in wind tunnels
A72-22320
Small scale atmospheric turbulence measurement with airborne hot-wire anemometer, discussing optimal choice of experimental parameters
A72-22435
Turbulent boundary layer growth measurement on annular diffuser containing free vortex swirl
A72-23857

FLOW STABILITY

Aerodynamic noise generation mechanism of ideally expanded supersonic jet based on large scale flow instabilities, deriving mathematical model
A72-24331

FLOW VISUALIZATION

Supersonic and subsonic jet flows coexistence in constant section duct, analyzing pressure on walls and in fluid and schlieren visualization
[ONERA, TP NO. 976] A72-22813
Hydraulic tank application to internal flow visualization in turbomachinery, describing test equipment and methods used for axial flow model
A72-24654
Vortex breakdown studied by flow visualization noting pressure gradient effect and analogy with boundary layer separation and wake bursting
[ONERA-NT-175] N72-19328
Visualization of unsteady flow around oscillating airfoils and rotary wings, and within turbomachines in hydraulic tunnels
[ONERA-NT-180] N72-19329
Analysis of helicopter rotary wing performance with recirculatory flow visualization during wind tunnel tests
[AD-734873] N72-19352

FLUID DYNAMICS

Book on ideal and real compressible fluid dynamics covering supersonic flow past airfoils and shock wave interaction with laminar boundary layer
A72-23045

FLUID FLOW

Internal flows - Conference, Salford, England, April 1971
A72-23853
German book on flow technology and fluid flow machines covering hydrodynamics, gas dynamics, aerodynamics, airfoils, wind tunnels, propellers, helicopters, turbomachines, blade cascades, etc
A72-25122

FLUID JETS

Plane laminar semibounded incompressible fluid jet propagation into slipstream along moving plate, solving boundary layer equations
A72-25136

FLUIDICS

Application of fluidic pneumatic elements and systems for control of aircraft, missiles, and spacecraft
[AD-734715] N72-19343

FLUSHING

Reliability design for airborne ecological system for jumbo jets, discussing toilet flushing and

multiple server queueing model

A72-23999

FLY BY WIRE CONTROL

Fly by wire and integrated actuator package techniques for developing survivable flight control system in jet aircraft
[AD-733582] N72-18040

FOG

Runway fog dispersal system based on underground installed flight-discarded turbojet engines, discussing system efficiency and economics
A72-22910
Warm fog modification by seeding with hygroscopic materials
[AD-733671] N72-18636
Economic analysis of effect of fog on air traffic and benefits of fog dispersal capability in terminal area
[AD-735132] N72-19722

FORCE DISTRIBUTION

Higher order forces effect on shock absorbing systems of masses interconnected by elastic and damping members of aircraft landing gears
A72-22861

FORECASTING

Airport traffic forecasts for Washington, D.C. for 1972 to 1983
N72-19975

FORGING

Heat treatment and machining for distortion control of large Al alloy forgings for DC 10 aircraft
A72-22476

FOURIER TRANSFORMATION

Spatial Fourier transform for wave scattering from rough surfaces
[AD-734044] N72-19576

FRACTURE MECHANICS

Application of fracture mechanics to design, analysis, and qualification of aircraft structural systems
[AD-731565] N72-18045

FRACTURING

Causes of compression fractures and resumption of duties by Greek pilots after recovery
N72-19149

FRAUNHOFER LINE DISCRIMINATORS

Fraunhofer line discriminator as remote sensor of fluorescent dyes used in pollution detection
[NASA-CR-125643] N72-18448
Sensitivity of Fraunhofer line fluorometer for photodensitometric dye concentration measurements in water
[NASA-CR-125653] N72-18450

FREE FLIGHT

Free flight measurement of blunt leading edge caret wing pressure and heat transfer at supersonic speeds
[ARC-R/M-3679] N72-19007

FREQUENCY DIVISION MULTIPLEXING

Evaluation of technological risk areas of time/frequency air traffic control system
[AD-733761] N72-18668

FREQUENCY RESPONSE

Wind tunnel tests to determine dynamic characteristics of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 1
[NASA-CR-114427] N72-18024

FRICTION REDUCTION

Evaluation of bearing materials, shaft materials, and lubricants for airframe applications by simulating loads, motions, and temperatures on bearings in normal operation
[AD-733705] N72-18505

FUEL FLOW

Fuel flow control by sensing airflow conditions at discharge of engine compressor
[AD-734542] N72-19857

FULL SCALE TESTS

Subsonic wind tunnel for testing full scale aircraft
[NASA-TR-X-62106] N72-19291

FUNCTIONAL ANALYSIS

Optimal control synthesis for linear passive stationary plants with symmetrical coefficient matrices of minimized functional
A72-23431
Liapunov functional stability analysis in structural dynamics problems including wave equations with nonlinear damping
A72-23457

G

GAME THEORY

Near optimal closed loop control laws for fixed time pursuit-evasion differential game between two aircraft in vertical plane, using dynamic modeling
A72-23805

GAS ANALYSIS

Airborne gas chromatograph for real time diffusion analyses, describing flight test results with sulfur hexafluoride plumes
A72-22451

GAS CHROMATOGRAPHY

Airborne gas chromatograph for real time diffusion analyses, describing flight test results with sulfur hexafluoride plumes
A72-22451

GAS DYNAMICS

German book on flow technology and fluid flow machines covering hydrodynamics, gas dynamics, aerodynamics, airfoils, wind tunnels, propellers, helicopters, turbomachines, blade cascades, etc
A72-25122

GAS GENERATORS

Detail design of turbotip lift fan for use with YJ97-GE-100 turbojet gas generator to V/STOL transport research aircraft
[NASA-CR-120787]
N72-19842

GAS JETS

Aerodynamic noise produced by gas jet flow around airfoil, discussing sound reduction
A72-24107

GAS TEMPERATURE

Two spool gas turbine engine characteristics with speed reduction, determining time dependence of turbocompressor rpm, gas temperature and engine power
A72-23185

GAS TURBINE ENGINES

Optimal control of two shaft gas turbine engine in helicopter, using cybernetic equipment
A72-22862

Two spool gas turbine engine characteristics with speed reduction, determining time dependence of turbocompressor rpm, gas temperature and engine power
A72-23185

Aerodynamic efficiency of plane slotted blade cascades of adjustable nozzle diaphragms in transport aircraft axial flow gas turbine engines
A72-23186

Intercomponent complex annular ducts design for gas turbine engines
A72-23872

Hydrothermodynamic foundations of hydrofoil engines employing gas-water mixtures and gas turbine generators, analyzing thrust coefficient and power efficiency
A72-25128

Coatings for aircraft gas turbine engine corrosion protection and reentry heat shields
[NASA-TN-X-68007]
N72-18578

Environment pollution of turbine engine aircraft
N72-19030

GAS TURBINES

Ceramic fiber reinforced Ni base alloy for gas turbine blades, improving creep resistance at high temperatures
A72-22396

Heat transfer research review, discussing gas turbines, aeronautics, astronautics, nuclear power, thermal pollution and controlled fusion challenges
A72-23684

GASEOUS DIFFUSION

Airborne gas chromatograph for real time diffusion analyses, describing flight test results with sulfur hexafluoride plumes
A72-22451

GENERAL AVIATION AIRCRAFT

Book on general aviation safety covering statistical accident records, accident analysis, crashworthiness, preventive measures, etc
A72-23750

Flight test investigation of effect of wing tip vortices generated by large jet transport aircraft when intersected by smaller general aviation type

aircraft
[NASA-TN-D-6655]
N72-18003
Computer program for determining characteristics of propellers used in general aviation aircraft to include blade shape parameter and integrated design lift coefficient
[NASA-CR-114399]
N72-18004

GLASS

Evaluation of bisphenol polyether, styrene acrylate, and chlorinated rubber alkyl as coatings for airfield runway marking
[AD-734320]
N72-19644

GLIDE PATHS

Operational evaluation of portable scanning beam guidance system for improved instrument landing capability
[FAA-RD-72-26]
N72-19720
Development of ultrahigh frequency glide path system
[AD-733694]
N72-19726

GLIDERS

Sailplane computer displaying rate of climb simultaneously with airspeed for pilot determination of best strategy for local upcurrent-downcurrent conditions
A72-23550

GOVERNMENT/INDUSTRY RELATIONS

Collaborating parties cooperation with outsiders, examining relationship with government organizations, airworthiness authorities, financial institutions and marketing agencies
A72-24882

GRAVITATIONAL EFFECTS

Magnetic simulation of gravity for wind tunnel investigations of aircraft jettison processes, considering Proudman number and relationships between model and full scale aircraft
A72-24775

GROUND EFFECT

Sonic boom effects on structures, discussing ground motion, direct excitation by shock waves and damages
A72-23318

Wind tunnel tests to determine effects of ground proximity on aerodynamic characteristics of V/STOL aircraft model
[NASA-TN-X-2212]
N72-18008

GROUND EFFECT MACHINES

Hovercraft internal and external aerodynamic forces, discussing control, suspension, yawing moments, directional and roll stability and random surfaces performances
A72-22824

Airfoil ram-wing air-water hybrid vehicle X-113 Am design and operational principles based on aerodynamic ground effect, discussing flight tested performance characteristics
A72-22971

Ground effect wing vehicles stability in forward motion, deriving characteristic equations by linear analysis
A72-24844

GROUND SUPPORT EQUIPMENT

System for evaluation of aircraft diagnostic and inspection equipment performance characteristics
[AD-733283]
N72-18041

Development of integrated system for performing checkout of space launchers and aircraft systems
N72-19489

GROUND WIND

Airport meteorological instrumentation, discussing ground wind, visibility, cloud height, air temperature and humidity detectors and radar equipment
A72-25093

GROUND-AIR-GROUND COMMUNICATIONS

Real time pilot reports via digital ground-air-ground data link, discussing encoding and processing equipment, meteorological codes and automatic real time weather forecasts
A72-25079

GUST ALLEVIATORS

Effect of limited amplitude and rate of flap motion on vane controlled gust alleviation system
[NASA-TN-D-6733]
N72-18995

GUST LOADS

Mathematical wind gust model for computer simulation of aircraft aerodynamic stability
[AD-733905]
N72-18648

- Derivation of cross-spectral functions for vertical and longitudinal components of two dimensional gust field
[NASA-CR-2011] N72-19029
- GYROCOMPASSES**
Design, development, characteristics, and applications of gyroscopic devices
[AD-733275] N72-18662
- GYROSCOPES**
Design, development, characteristics, and applications of gyroscopic devices
[AD-733275] N72-18662
- GYROSTABILIZERS**
Design, development, characteristics, and applications of gyroscopic devices
[AD-733275] N72-18662

H

- HAIL**
Probability estimates of aircraft encounters with hail, discussing variations with locality, hailstone size and height and supersonic transport experience
A72-23423
- HANDBOOKS**
Handbook on aerospace research and development
[AD-729571] N72-18990
- HARMONIC OSCILLATION**
Pressure measurements on harmonically oscillating wing-tail configurations in incompressible speed range
[DLR-FB-71-54] N72-19024
- HARNESSES**
Acceleration protection system design, impact testing of restraint harnesses and ejection seat cushions, and implications
N72-19157
- HEAT EXCHANGERS**
Design and evaluation of cooling systems for wings on hypersonic cruise vehicles
[NASA-CR-1916] N72-18010
- HEAT RESISTANT ALLOYS**
High temperature Co-base alloy for nuclear, chemical and reentry vehicle applications
A72-22478
- Fabrication of high strength-high temperature superalloys for turbine blades
[AD-734304] N72-19647
- HEAT SHIELDING**
Design and evaluation of cooling systems for wings on hypersonic cruise vehicles
[NASA-CR-1916] N72-18010
- Coatings for aircraft gas turbine engine corrosion protection and reentry heat shields
[NASA-TM-X-68007] N72-18578
- HEAT TRANSFER**
Heat transfer research review, discussing gas turbines, aeronautics, astronautics, nuclear power, thermal pollution and controlled fusion challenges
A72-23684
- Free flight measurement of blunt leading edge caret wing pressure and heat transfer at supersonic speeds
[ARC-R/M-3679] N72-19007
- HEAT TREATMENT**
Heat treatment and machining for distortion control of large Al alloy forgings for DC 10 aircraft
A72-22476
- HELICOPTER DESIGN**
Marchetti SV-20-A twin engine winged commercial/utility helicopter, describing design details, onboard systems and payload accommodations
A72-22907
- Application of ring vortex method for determining aerodynamic characteristics of rotary wings and design of lifting rotor systems
[AD-735018] N72-19013
- Helicopter design for improving crash survivability of aircraft and occupants
N72-19141
- HELICOPTER ENGINES**
Optimal control of two shaft gas turbine engine in helicopter, using cybernetic equipment
A72-22862
- HELICOPTER PERFORMANCE**
Wind tunnel tests of models of helicopter rotary

- wings to determine blade element airloads in unstalled and stalled flight regimes
[NASA-CR-114424] N72-18005
- Flight tests to determine characteristics of blade slap in rotary wings and effect on helicopter performance
[NASA-CR-1983] N72-19026
- Analysis of helicopter rotary wing performance with recirculatory flow visualization during wind tunnel tests
[AD-734873] N72-19352
- HELICOPTERS**
Hybrid computing techniques in helicopter simulation, taking into account complex dynamic systems nonlinear effects
A72-22936
- Flight tests of strapdown inertial navigation system in helicopter to determine feasibility for simulating systems using inertial navigation equipment
[AD-733430] N72-18663
- Aerodynamic performance of lifting helicopter rotor during vertical descent
[AD-734229] N72-19011
- Full scale wind tunnel investigation of advancing blade concept rotor system
[AD-734338] N72-19038
- Army helicopter accident analysis for defining impact injury problems and helicopter crashworthiness
N72-19129
- Design and performance of filter resonators for helicopter noise reduction
[AD-734812] N72-19222
- Conference on helicopter operations in fire fighting
[AD-734078] N72-19986
- HIGH ALTITUDE**
Pneumatically assisted parachute deployment at high altitudes with low accelerations
A72-24273
- HIGH ALTITUDE BREATHING**
Technique for predicting etiology of decompression sickness in unpressurized aircraft above 20,000 feet
[AD-731118] N72-19106
- HIGH STRENGTH ALLOYS**
Fabrication of high strength-high temperature superalloys for turbine blades
[AD-734304] N72-19647
- HIGH TEMPERATURE RESEARCH**
Evaluation of bearing materials, shaft materials, and lubricants for airframe applications by simulating loads, motions, and temperatures on bearings in normal operation
[AD-733705] N72-18505
- HOT-WIRE ANEMOMETERS**
Small scale atmospheric turbulence measurement with airborne hot-wire anemometer, discussing optimal choice of experimental parameters
A72-22435
- HOVERCRAFT GROUND EFFECT MACHINES**
Influence of aerodynamic characteristics on handling of amphibious hovercraft
[CRANFIELD-AERO-7] N72-17992
- HP-115 AIRCRAFT**
Approximate analysis for solving fourth order nonlinear equation of motion of HP-115 aircraft at low speed
[ARC-R/M-3674] N72-19034
- HUMAN FACTORS ENGINEERING**
Anthropotechnical aspects of V/STOL aircraft control, discussing instrument and control systems concepts based on development and flight tests of experimental Do-31 VTOL aircraft
A72-22784
- Analysis of human factors problems associated with air traffic control systems with emphasis on impact caused by automation
[NASA-CR-1957] N72-19102
- HUMAN PERFORMANCE**
Factor analysis and statistical data for human carrier landing performance criteria
[AD-733703] N72-18120
- Analysis of human factors problems associated with air traffic control systems with emphasis on impact caused by automation
[NASA-CR-1957] N72-19102
- HUMIDITY MEASUREMENT**
Airport meteorological instrumentation, discussing

SUBJECT INDEX

INSPECTION

ground wind, visibility, cloud height, air temperature and humidity detectors and radar equipment	A72-25093		
HYBRID COMPUTERS			A72-23310
Hybrid computing techniques in helicopter simulation, taking into account complex dynamic systems nonlinear effects	A72-22936	IMAGING TECHNIQUES	Laser recording real time imagery for use in tactical reconnaissance aircraft
			A72-23928
HYDRAULIC ANALOGIES		IMPACT TESTS	Acceleration protection system design, impact testing of restraint harnesses and ejection seat cushions, and implications
Visualization of unsteady flow around oscillating airfoils and rotary wings, and within turbomachines in hydraulic tunnels [ONERA-NT-180]	N72-19329		N72-19157
HYDRAULIC EQUIPMENT		IMPINGEMENT	Wind tunnel investigation of shock impingement caused by boundary layer separation ahead of blunt fins [RM-536]
Effect of high temperature hydraulic fluid on operation of control surface servovalves installed on T-38 aircraft [AD-734259]	N72-19042		N72-18285
HYDRAULIC TEST TUNNELS		IN-FLIGHT MONITORING	Automation in planning and execution of flights, considering navigation, communication, flight instruments monitoring, control/stabilization and warning systems
Hydraulic tank application to internal flow visualization in turbomachinery, describing test equipment and methods used for axial flow model	A72-24654		A72-22780
HYDRODYNAMICS		INCOMPRESSIBLE FLOW	Velocities induced by distributions of infinite kinked sources and vortex lines representing wings with sweep and dihedral in incompressible flow [ARC-R/M-3667]
German book on flow technology and fluid flow machines covering hydrodynamics, gas dynamics, aerodynamics, airfoils, wind tunnels, propellers, helicopters, turbomachines, blade cascades, etc	A72-25122		N72-19332
Hydrothermodynamic foundations of hydrofoil engines employing gas-water mixtures and gas turbine generators, analyzing thrust coefficient and power efficiency	A72-25128	INCOMPRESSIBLE FLUIDS	Plane laminar semibounded incompressible fluid jet propagation into slipstream along moving plate, solving boundary layer equations
Hydrodynamic forces in sinusoidal vibrations of disk in water channel with toroidal vorticity wake pattern, applying results to flapping wing mechanics	A72-25129		A72-25136
HYDROFOILS		INERTIAL NAVIGATION	Impact of inertial navigation on air safety and modeling techniques to assess effects of air traffic control satellite surveillance system [AD-733758]
Hydrothermodynamic foundations of hydrofoil engines employing gas-water mixtures and gas turbine generators, analyzing thrust coefficient and power efficiency	A72-25128		N72-18667
HYDROPLANING		INERTIAL REFERENCE SYSTEMS	System methodology application to filter design for inertial reference unit calibration in digital test station for FB-111 aircraft navigation system
Slush drag, wheel spray, and hydroplaning research using pneumatic wheels and moving runway and water layer model test facilities [ARC-R/M-3682]	N72-19035		A72-23820
HYPERSONIC AIRCRAFT		INFORMATION SYSTEMS	Ground based ATC information processing systems analysis, considering controllers work load
Water-glycol convective cooling system for Mach 6 hypersonic transport airframe [NASA-CR-1918]	N72-18011		A72-22778
Weight estimation and analysis of major structural components of hypersonic, liquid hydrogen fueled aircraft [NASA-TN-D-6692]	N72-18911	Avionics systems electrical interface connection design information document creation and dissemination, using EMPRENT computer program	A72-24864
HYPERSONIC FLIGHT		INFRARED DETECTORS	Cd-Te photodetectors for high temperature infrared detectors of aircraft engine fires [AD-734785]
Design and evaluation of cooling systems for wings on hypersonic cruise vehicles [NASA-CR-1916]	N72-18010		N72-19536
HYPERVELOCITY WIND TUNNELS		INFRARED INSTRUMENTS	IR measurement of hot jets turbulence intensity axial and transverse profiles, noting application to sound sources detection
Magnetic balance measurements of aerodynamic forces on spheres and slender cones in hypersonic low density wind tunnels, noting sting effect	A72-24771		A72-24656
HYSTERESIS		INFRARED RADIATION	Coherent and incoherent structures of aerodynamic noise, analyzing compressor near field and hot jet IR emission source [ONERA, TP NO. 983]
Iron rotational hysteresis effect in cold magnetic balance wind tunnel system for spinning aircraft configurations and subsonic flow regimes	A72-24776		A72-22816
		IR measurement of hot jets turbulence intensity axial and transverse profiles, noting application to sound sources detection	A72-24656
IDEAL FLUIDS		INLET FLOW	Conical diffuser response to velocity distribution and turbulence intensity at inlet
Book on ideal and real compressible fluid dynamics covering supersonic flow past airfoils and shock wave interaction with laminar boundary layer	A72-23045		A72-23858
IGNITION TEMPERATURE			Flight test analysis of flow characteristics of air intake system of F-111A aircraft at supersonic speed [NASA-TN-D-6679]
Ignition characteristics of aircraft fluids impinging on hot surfaces under air flow conditions found during flight [AD-734238]	N72-19964		N72-18996
IMAGE FILTERS			Effects of radial and circumferential inlet velocity profile distortions on performance of short-length double-annular ram-induction combustor [NASA-TN-D-6706]
Optical image filtering to simplify and facilitate automatic aerial photointerpretation processes		INSPECTION	Responsibilities of fixed base operators regarding aircraft inspection
			N72-18016

INSTRUMENT APPROACH

SUBJECT INDEX

Development of integrated system for performing checkout of space launchers and aircraft systems
N72-19489

INSTRUMENT APPROACH
Simulation of PA-30 Comanche light aircraft performance and autopilot operation during final approach configuration
[AD-733757] N72-18043
Operational evaluation of portable scanning beam guidance system for improved instrument landing capability
[FAA-RD-72-26] N72-19720

INSTRUMENT FLIGHT RULES
UFO sighting case history and analysis, discussing bright light approaching on collision course during night instrument flight rules
A72-22646
Aircraft collision near misses under IFR and VFR conditions, discussing ATC coordination, equipment failure and personal and planning problems
A72-22972

INSTRUMENT LANDING SYSTEMS
ILS development, discussing four course radio ranges, autoland and radar systems
A72-23449
Microwave equipment and technology application for instrument landing, terminal ATC, millimeter wave CAT detection and satellite communications
A72-24036
Operational evaluation of portable scanning beam guidance system for improved instrument landing capability
[FAA-RD-72-26] N72-19720

INSTRUMENTS
Implementation of instrumentation techniques for service testing of aircraft and airborne equipment to meet military requirements
[AD-734306] N72-19300

INTAKE SYSTEMS
Turbine engine aerodynamics research on higher inlet temperature and blade loading
[NASA-TN-X-68016] N72-18782

INTEGRAL EQUATIONS
Integrodifferential equation for rigid tunnel walls effect on supercavitating flow past thin jet flapped airfoil, noting lift coefficient derivatives
A72-24562

INTEGRATED CIRCUITS
Development and characteristics of microelectronic equipment for improved reliability and reduced weight and size of electronic components
N72-19484

INTELLIGIBILITY
Improving intelligibility of voice communication in high acoustic noise environments as exists inside helicopters
[AD-733431] N72-18171

INTERMEDIATE FREQUENCIES
Flight test method for determination of stability and performance characteristics from maneuvers in low and intermediate frequencies
[VTH-163] N72-19009

INTERNATIONAL COOPERATION
Legal aspects of international cooperation on aircraft design and production, discussing work distribution, project management and liabilities sharing
A72-24881
Collaborating parties cooperation with outsiders, examining relationship with government organizations, airworthiness authorities, financial institutions and marketing agencies
A72-24882

INTERNATIONAL TRADE
Book on IATA organization and functions, discussing international aviation history, conference machinery, enforcement of conference resolutions, air transportation economics, public corporations, etc
A72-23846

IRON
Iron rotational hysteresis effect in cold magnetic balance wind tunnel system for spinning aircraft configurations and subsonic flow regimes
A72-24776

JET AIRCRAFT

Corrosion resistant fabrication methods in jumbo jetliners components to reduce maintenance and repair downtime, discussing clad wing and fuselage skins
A72-24025
Combat jet helicopter maneuverability, considering aircraft flying characteristics, pilot capability, flight configuration, altitude and load factor
A72-24923
Mitsubishi IT-2 jet trainer aircraft, presenting design, structural and performance data
A72-25107
Fly by wire and integrated actuator package techniques for developing survivable flight control system in jet aircraft
[AD-733582] N72-18040
Application of differential games technique to determine aircraft propulsion versus engagement parameters
[AD-731578] N72-18046
Special events of meteorological origin affecting civil jet aircraft operations obtained from flight recorders for period Jan. 1966 to Nov. 1968
[ARC-CP-1188] N72-19687

JET AIRCRAFT NOISE
Jet noise suppression by splitting supersonic nozzle flow into separate jets by overexpansion into multilobed divergent nozzle
[NASA-TN-D-6667] N72-17990
Noise data obtained with small scale model of externally blown flap of type being considered for STOL aircraft
[NASA-TN-D-6636] N72-19025
Jet aircraft noise pollution in airport vicinity
N72-19031
Influence of reflections on acoustic pressure spectra of turbojets
[NASA-TT-F-14185] N72-19737

JET ENGINES
Pod-mounted jet engine follower force instability, analyzing two degrees of freedom system dynamics
A72-22938
Analysis of pollutant emissions from jet aircraft and combustion research for reducing emissions through combustor design and fuel atomization
[NASA-TN-X-68000] N72-18009
Proceedings of International Aviation Maintenance Symposium discussion on jet engine maintenance planning and experience
N72-18020
Environmental tests to determine behavior of titanium alloys under hot salt, stress corrosion conditions existing in jet engines
[NASA-TN-X-68015] N72-18541
Effects of radial and circumferential inlet velocity profile distortions on performance of short-length double-annular ram-induction combustor
[NASA-TN-D-6706] N72-19841

JET EXHAUST
Analysis of pollutant emissions from jet aircraft and combustion research for reducing emissions through combustor design and fuel atomization
[NASA-TN-X-68000] N72-18009

JET FLAPS
Integrodifferential equation for rigid tunnel walls effect on supercavitating flow past thin jet flapped airfoil, noting lift coefficient derivatives
A72-24562
Dynamic pressure distribution and propulsive contours of trailing vortex wake downwind of external flow jet flap, using five-hole probe measurements
A72-25070
Performance tests of single-stage turbine with low solidity jet flap rotor blade assembly using various cavity pressure ratios, equivalent speeds, and expansion ratios
[NASA-CR-1968] N72-18994

JET FLOW
Capacitive electret pressure sensors calibration for interior measurements in turbine engines, jets and exhaust nozzles
[ONERA, TP NO. 982] A72-22815

Coherent and incoherent structures of aerodynamic noise, analyzing compressor near field and hot jet IR emission source
[ONERA, TP NO. 983] A72-22816

Aerodynamic noise produced by gas jet flow around airfoil, discussing sound reduction A72-24107

Aerodynamic throttling effect due to air jet flow interaction in throat region of mainstream two dimensional nozzle flow A72-24845

Plane laminar semibounded incompressible fluid jet propagation into slipstream along moving plate, solving boundary layer equations A72-25136

Characteristics of jets flowing from air entry holes of combustion chamber of gas turbine for jet flow parallel to and normal to primary flow through turbine [NAL-TR-227] N72-18279

Experimental estimation methods for noise spectra and intensity from round jet [AD-734042] N72-19338

JET MIXING FLOW
Jet noise suppression by splitting supersonic nozzle flow into separate jets by overexpansion into multilobed divergent nozzle [NASA-TN-D-6667] N72-17990

JETTISONING
Magnetic simulation of gravity for wind tunnel investigations of aircraft jettison processes, considering Prandtl number and relationships between model and full scale aircraft A72-24775

JP-4 JET FUEL
Thermodynamic and chemical properties of JP-4 jet fuel for 1970 [AD-733352] N72-18764

K

KERNEL FUNCTIONS
Kernel function procedure for determining aerodynamic forces of planforms using linearized oscillating supersonic surface theory [X-28-445] N72-18999

L

L-1011 AIRCRAFT
Automated navigation management in cockpit, considering modular navigation /MONA/ dual channel system of L-1011 TriStar A72-23450

Flight testing of automated modular area navigation system for L-1011, describing computer, data storage and control-display units and electronic automatic chart system A72-24271

LAMINAR BOUNDARY LAYER
Book on ideal and real compressible fluid dynamics covering supersonic flow past airfoils and shock wave interaction with laminar boundary layer A72-23045

LAMINAR FLOW
Plane laminar semibounded incompressible fluid jet propagation into slipstream along moving plate, solving boundary layer equations A72-25136

LAMINATES
Thermally stable laminating resins based on addition-type pyrolytic polymerization [NASA-CR-72984] N72-18584

LANDING
Flight tests of low lift to drag ratio approach and landing using CV 990 aircraft with similar size and performance characteristics of proposed space shuttle vehicle [NASA-TN-D-6732] N72-19022

LANDING GEAR
Higher order forces effect on shock absorbing systems of masses interconnected by elastic and damping members of aircraft landing gears A72-22861

Runway unevenness and landing gear characteristics effects on SST vibration during taxiing, taking off and landing A72-23459

LANDING SITES

Procedures for collecting distance measuring equipment traffic loading data for TACAN ground stations [FAA-WA-72-24] N72-18653

LASER OUTPUTS

Stochastic optimization of airborne laser seeker system design parameters to maximize target acquisition probability through regression analysis of data from computerized model A72-24682

LASERS

Laser recording real time imagery for use in tactical reconnaissance aircraft A72-23928

Spatial Fourier transform for wave scattering from rough surfaces [AD-734044] N72-19576

LATERAL CONTROL

Pressure distribution on 45 deg swept half wing including effectiveness of upper surface spoiler as roll control [ARC-CP-1184] N72-19032

LATERAL OSCILLATION

Approximate analysis for solving fourth order nonlinear equation of motion of HP-115 aircraft at low speed [ARC-R/M-3674] N72-19034

LATERAL STABILITY

Hovercraft internal and external aerodynamic forces, discussing control, suspension, yawing moments, directional and roll stability and random surfaces performances A72-22824

State sensitivity functions in aircraft parameter identification for lateral dynamics under aileron deflection from model response and in-flight test data A72-23807

LEADING EDGES

Laminar/turbulent boundary layer transition on parabolic wing profile in supersonic wind tunnel, noting critical Reynolds number increase with leading edge thickness A72-22407

Supersonic flow around thin cruciform wing with antisymmetrical angle of attack distribution and horizontal plane with leading edge, considering flow separation at edges A72-25118

Free flight measurement of blunt leading edge caret wing pressure and heat transfer at supersonic speeds [ARC-R/M-3679] N72-19007

LEGAL LIABILITY

Legal aspects of international cooperation on aircraft design and production, discussing work distribution, project management and liabilities sharing A72-24881

LENGTH

Comparison of flow characteristics of two transonic compressors N72-19852

LIAPUNOV FUNCTIONS

Liapunov functional stability analysis in structural dynamics problems including wave equations with nonlinear damping A72-23457

LIFT

Development of technique for measuring steady state lift loads on aircraft with T-tail configuration and determination of flutter speed [RAE-TR-71035] N72-17991

Lifting potential flow in terms of doublet distribution over body surface and trailing vortex sheet [NAL-TR-243] N72-18281

LIFT AUGMENTATION
Lift increase of small span-chord ratio wings with lateral fluid jets directed along span [AD-733858] N72-19010

LIFT DEVICES
Wind tunnel investigation of Reynolds number effects on boundary layer separation incidence and maximum lift coefficient of high-lift device equipped aircraft model A72-24657

LIFT DRAG RATIO

Flight tests of low lift to drag ratio approach and landing using CV 990 aircraft with similar size and performance characteristics of proposed space shuttle vehicle
[NASA-TN-D-6732] N72-19022

LIFT FANS

STOL and V/STOL transport aircraft design requirements consideration based on common propulsion and lift engine types use, noting fan lift solution superiority
A72-24865

Wind tunnel aerodynamic characteristics of V/STOL transport model with outboard pod mounted front fans and rear fans located in wing-fuselage junction
[NASA-TN-X-62102] N72-17987

Fan and wing force data on wind tunnel model of VTOL lift fan in two dimensional wing, with and without exit louvers
[NASA-TN-D-6654] N72-18775

Detail design of turbojet lift fan for use with YJ97-GE-100 turbojet gas generator to V/STOL transport research aircraft
[NASA-CR-120787] N72-19842

LIFTING BODIES

Structural design and performance tests on low drag ringwing-body configurations
[NLR-TR-69070-U] N72-17993

LIFTING ROTORS

General solution for thin airfoil rectilinear motion in ideal incompressible gas, applying to rotor blade lift calculation
A72-22860

Bell lifting rotor systems, examining company contributions in electronics and avionics
A72-24877

LIGHT AIRCRAFT

Simulation of PA-30 Comanche light aircraft performance and autopilot operation during final approach configuration
[AD-733757] N72-18043

LINEAR SYSTEMS

Optimal control synthesis for linear passive stationary plants with symmetrical coefficient matrices of minimized functional
A72-23431

Derivation of differential equations for optimal feedback for constant linear system
[VTH-165] N72-19663

LIQUID-GAS MIXTURES

Hydrothermodynamic foundations of hydrofoil engines employing gas-water mixtures and gas turbine generators, analyzing thrust coefficient and power efficiency
A72-25128

LOAD DISTRIBUTION (FORCES)

Wing load distribution and induced drag control by warping, summarizing linear theory and wind tunnel test results
A72-24218

LOAD TESTS

Structural Acoustic Monitor system for airframe structural proof testing, providing multichannel recording and aural monitoring of acoustic data derived from aircraft mounted accelerometers
A72-24146

LONGITUDINAL CONTROL

Wind tunnel tests to determine effectiveness of cyclic pitch control on V/STOL aircraft for longitudinal control during hover and transition
[AD-734237] N72-19039

Wind tunnel tests to determine longitudinal control capability of four propeller, tilt wing aerodynamic configuration with cyclic pitch propellers
[AD-734236] N72-19040

Wind tunnel tests to determine effectiveness of cyclic pitch propellers as low speed longitudinal control system for V/STOL tilt wing transport-type aircraft
[AD-734068] N72-19047

LONGITUDINAL STABILITY

Pitching moments effect on phugoid and height mode stability of aircraft in supersonic flight
A72-23622

Longitudinal stability and control derivatives of jet fighter aircraft extracted from flight test data by utilizing maximum likelihood estimation

[NASA-TN-D-6532]

N72-18013

LOOP ANTENNAS

Radiation patterns from adaptive loop antenna arrays for aircraft communication systems
[AD-735096] N72-19230

LOW ASPECT RATIO

Slender body theory for flow calculation past low aspect ratio delta wing with straight trailing edge, noting lifting vortices distribution
A72-25131

Lift increase of small span-chord ratio wings with lateral fluid jets directed along span
[AD-733858] N72-19010

LOW DENSITY WIND TUNNELS

Magnetic balance measurements of aerodynamic forces on spheres and slender cones in hypersonic low density wind tunnels, noting sting effect
A72-24771

LOW FREQUENCIES

Flight test method for determination of stability and performance characteristics from maneuvers in low and intermediate frequencies
[VTH-163] N72-19009

LOW SPEED

Approximate analysis for solving fourth order nonlinear equation of motion of HP-115 aircraft at low speed
[ARC-R/H-3674] N72-19034

LOW SPEED WIND TUNNELS

Base pressure drag reduction on rectangular wings with blunt trailing edges from low speed wind tunnel measurements
A72-24842

Low speed wind tunnel test on low-drag airfoil at half a million Reynolds number, noting aerodynamic coefficients
[ARC-CP-1187] N72-19033

LUBRICANTS

Ignition characteristics of aircraft fluids impinging on hot surfaces under air flow conditions found during flight
[AD-734238] N72-19964

LUMINOUS INTENSITY

Sensitivity of Fraunhofer line fluorometer for photodensitometric dye concentration measurements in water
[NASA-CR-125653] N72-18450

M

MACHINE TOOLS

Automatic riveting machine for fuel tight aircraft structures, describing process technique and machine design details and features
A72-22906

MACHINING

Heat treatment and machining for distortion control of large Al alloy forgings for DC 10 aircraft
A72-22476

MAGNETIC COILS

Superconducting coil design for magnetic suspension of supersonic wind tunnel balance
A72-24759

MAGNETIC EFFECTS

Magnetic simulation of gravity for wind tunnel investigations of aircraft jettison processes, considering Froude number and relationships between model and full scale aircraft
A72-24775

MAGNETIC FIELDS

Development of magnetic artificial gravity test facility for use in wind tunnel tests to simulate separation of external stores from aircraft in flight
[NASA-CR-1955] N72-19000

MAGNETIC SUSPENSION

Electromagnetic suspension - Conference, Southampton, England, July 1971
A72-24756

Superconducting magnetic suspension and balance facility of supersonic wind tunnel for dynamic stability studies
A72-24757

Superconducting coil design for magnetic suspension of supersonic wind tunnel balance
A72-24759

Aerodynamic force and moment measurements on model in magnetic wind tunnel balance system, using field equations

SUBJECT INDEX

METEOROLOGICAL PARAMETERS

A72-24765
Data acquisition and reduction for model aerodynamics in superconducting magnetic suspension and balance of supersonic wind tunnel facility

A72-24766
Static aerodynamic characteristics of bulbous based cone models and slender wings at subsonic speed, using magnetic suspension and balance system

A72-24769
Aerodynamic data acquisition with magnetic balance on wind tunnel model delta and AGARD G wing planforms and body of revolution

A72-24770
Magnetic balance measurements of aerodynamic forces on spheres and slender cones in hypersonic low density wind tunnels, noting stang effect

A72-24771
Iron rotational hysteresis effect in cold magnetic balance wind tunnel system for spinning aircraft configurations and subsonic flow regimes

A72-24776
MAGNETIC TAPES
Ground station data reduction equipment for airborne analog and digital magnetic tape data acquisition system
[ARL/ME-130] N72-19238

MAINTAINABILITY
Quantitative definitions for maintainability and maintenance measurements N72-18023

MAINTENANCE
Quantitative definitions for maintainability and maintenance measurements N72-18023

MAN MACHINE SYSTEMS
Man and technology in orientation and navigation Conferences, Essen, Germany, October 1971

A72-22776
Development trends in airborne man machine flight control, discussing optimal division between human pilot and machine in relation to total system performance and economic factors

A72-22781
Simulation of wind, system data rate, and contingency event variables during steep descent of vertical lift aircraft under instrument conditions to determine pilot performance
[AD-734702] N72-19051

MANAGEMENT PLANNING
Proceedings of International Aviation Maintenance Symposium discussion on jet engine maintenance planning and experience N72-18020

Organization and operation of Federal Aviation Administration Maintenance Analysis Center N72-18022

Management planning and operation of test facilities for effective application to development of systems and equipment for aerospace vehicles
[AD-731548] N72-19307

Numerical analysis of flight planning and air traffic control procedures for civil aviation
[AD-734881] N72-19728

MANEUVERABILITY
Combat jet helicopter maneuverability, considering aircraft flying characteristics, pilot capability, flight configuration, altitude and load factor
A72-24923

MANUAL CONTROL
Optimal solutions for apportionment between automatic and manual flight control, considering number and types of displays required
A72-22783

MANUALS
Mark 7 arresting engine alignment measuring system and procedures for correcting misalignment
[AD-732445] N72-18272

Casting instruction manual for steels and aluminum, magnesium and copper alloys in aeronautical manufacturing
[RAE-LIB-TRANS-1557] N72-18501

MATERIALS TESTS
Evaluation of bearing materials, shaft materials, and lubricants for airframe applications by simulating loads, motions, and temperatures on bearings in normal operation
[AD-733705] N72-18505

MATHEMATICAL MODELS

Aerodynamic noise generation mechanism of ideally expanded supersonic jet based on large scale flow instabilities, deriving mathematical model
A72-24331

Model of completed successful missions of V/STOL versus CTOL aircraft systems
[AD-732681] N72-18031

Aerodynamic characteristics of bomb in steady, incompressible, potential flow based on model
[AD-733325] N72-18037

Mathematical model for effects of conical thickness distribution on separated flow past slender delta wings with small thickness/span ratios and sharp leading edges
[ARC-CP-1189] N72-19006

Linearized mathematical models with stability derivatives and equations of motion for two representative STOL aircraft
[AD-733756] N72-19036

Linear and angular acceleration terminology, human acceleration simulation, airplane airbag restraint systems, and mathematical models of automobile crash loads
N72-19155

Computerized simulation model for studying performance of air bag
[PB-20417] N72-19184

MAXIMUM LIKELIHOOD ESTIMATES
Longitudinal stability and control derivatives of jet fighter aircraft extracted from flight test data by utilizing maximum likelihood estimation
[NASA-TN-D-6532] N72-18013

Maximum likelihood technique used to extract aerodynamic parameters of Navion airplane from flight data
[NASA-TN-D-6643] N72-19019

MEASURE AND INTEGRATION
Integration method to derive angle of pitch, flight-path angle, and angle of attack from measurements in nonsteady flight
[VTH-156] N72-19008

MEASUREMENT
Quantitative definitions for maintainability and maintenance measurements N72-18023

MEASURING INSTRUMENTS
Electromagnetic position sensor for magnetically supported model in wind tunnel, discussing design, operation principles and performance
A72-24773

Catalog of devices and techniques for boundary layer and wake measurements on flight vehicles
[NASA-CR-116776] N72-18424

MERIDIONAL FLOW
FORTRAN program for calculating velocities in meridional plane of centrifugal compressor
[NASA-TN-D-6701] N72-17988

METAL JOINTS
Ar-H microplasma welding of thin Cr steel sheets with narrow seams for aircraft engines and precision equipment casings
A72-22548

METAL POLISHING
Polishes and corrosion removers for aluminum surfaces of Naval aircraft
[AD-733403] N72-18602

METAL SHEETS
Ar-H microplasma welding of thin Cr steel sheets with narrow seams for aircraft engines and precision equipment casings
A72-22548

METALLOGRAPHY
Metallurgical problems of metals used in spacecraft structures and propulsion systems
[CRANFIELD-MAT-6] N72-18545

METEOROLOGICAL FLIGHT
Operational aviation meteorological requirements, reviewing aircraft categories, ATC systems and avionics and navigational aids
A72-25078

METEOROLOGICAL INSTRUMENTS
Airport meteorological instrumentation, discussing ground wind, visibility, cloud height, air temperature and humidity detectors and radar equipment
A72-25093

METEOROLOGICAL PARAMETERS
Special events of meteorological origin affecting

- civil jet aircraft operations obtained from flight recorders for period Jan. 1966 to Nov. 1968 [ARC-CP-1188] N72-19687
- METEOROLOGICAL SATELLITES**
- Military weather forecasting requirements by 1980, discussing decision making, data processing, satellite data, mission and terminal forecasts, display and computer flight planning A72-25096
- METHOD OF CHARACTERISTICS**
- Calculation of shock wave reflection in supersonic inlets using method of characteristics including Mach disc problem [ONERA-NT-183] N72-19005
- METHODOLOGY**
- System methodology application to filter design for inertial reference unit calibration in digital test station for FB-111 aircraft navigation system A72-23820
- MICROELECTRONICS**
- Development and characteristics of microelectronic equipment for improved reliability and reduced weight and size of electronic components N72-19484
- MICROMETEOROLOGY**
- Micrometeorologic measurements of earth surface temperature by airborne radiometers [NASA-TT-F-14139] N72-18621
- MICROPLASMAS**
- Ar-H microplasma welding of thin Cr steel sheets with narrow seams for aircraft engines and precision equipment casings A72-22548
- MICROWAVE EQUIPMENT**
- Noncontacting measurements by miniature CW Doppler radar with semiconductor microwave generator A72-22691
- Microwave equipment and technology application for instrument landing, terminal ATC, millimeter wave CAT detection and satellite communications A72-24036
- Development of ultrahigh frequency glide path system [AD-733694] N72-19726
- MICROWAVE SPECTRA**
- High resolution observation of stratospheric submillimeter thermal emission spectrum by helium-cooled InSb electron bolometer on board Comet 2E aircraft A72-25023
- MIDAIR COLLISIONS**
- Aircraft collision near misses under IFR and VFR conditions, discussing ATC coordination, equipment failure and personal and planning problems A72-22972
- Probability of aircraft accidents through collisions with birds [AD-734803] N72-19049
- MILITARY AIR FACILITIES**
- Military weather forecasting requirements by 1980, discussing decision making, data processing, satellite data, mission and terminal forecasts, display and computer flight planning A72-25096
- Terminal forecast reference file for Columbus AFB, Miss. [AD-734807] N72-19713
- Terminal forecast reference file for McClellan Air Force Base [AD-734800] N72-19714
- MILITARY AIRCRAFT**
- Mitsubishi XT-2 jet trainer aircraft, presenting design, structural and performance data A72-25107
- Design criteria for safety factors in aircraft crash survival [AD-733358] N72-18038
- Statistical analysis of counting accelerometer data for normal acceleration of fleet aircraft [AD-733678] N72-18468
- Analysis of aircraft accidents resulting from pilot disorientation and vertigo during flights on military aircraft and helicopters [AD-735119] N72-19053
- Analysis of factors involved in performance and environmental testing of military aircraft [AD-734850] N72-19054
- MILITARY AVIATION**
- Annotated bibliography of US Air Force history [AD-733892] N72-19037
- MILITARY HELICOPTERS**
- Combat jet helicopter maneuverability, considering aircraft flying characteristics, pilot capability, flight configuration, altitude and load factor A72-24923
- Design and development of military helicopter cockpit for use in search and rescue missions [AD-733375] N72-18036
- MINIATURE ELECTRONIC EQUIPMENT**
- Noncontacting measurements by miniature CW Doppler radar with semiconductor microwave generator A72-22691
- MISSILE DESIGN**
- Simply supported skew plates stability under combined loading, noting wing and tail design applications for high speed aircraft and missiles A72-24196
- MISSILE SYSTEMS**
- Onboard aircraft and missile radar systems for interception of airborne targets N72-18158
- MISSILE TRACKING**
- Lidar application to aircraft and missile tracking and ranging, describing results obtained with ONERA experimental equipment A72-24655
- MIXING LENGTH FLOW THEORY**
- Two and three dimensional turbulent boundary layers integral calculation method, presenting similarity solutions based on extended mixing length model A72-24653
- Mixing length flow model for two- and three-dimensional turbulent boundary layers in compressible and incompressible flows using similarity equations N72-19327
- MONITORS**
- Aircraft maintenance and reliability monitoring and control on scheduled airlines, considering component failure rate and mode analysis, sampling inspection and remedial action A72-22901
- Structural Acoustic Monitor system for airframe structural proof testing, providing multichannel recording and aural monitoring of acoustic data derived from aircraft mounted accelerometers A72-24146
- MULTICHANNEL COMMUNICATION**
- Multichannel voice recorder-reproducer sets for air traffic control [AD-731562] N72-18180
- MULTIPHASE FLOW**
- Transonic and supersonic wind tunnel test data on intake performance of supersonic mixed compression inlet flow [NASA-CR-1977] N72-18786
- N**
- NACELLES**
- Nacelle cowling of high bypass ratio turbofan engines [AD-733738] N72-18789
- NAVIGATION**
- Man and technology in orientation and navigation Conferences, Essen, Germany, October 1971 A72-22776
- Theoretical research on optimal control and automatic navigation [AD-733397] N72-18664
- NAVIGATION AIDS**
- Automated navigation management in cockpit, considering modular navigation /MONA/ dual channel system of L-1011 TriStar A72-23450
- Area navigation for Chicago-New York region, evaluating Decca Omnitrac 1A RNAV system installation in Boeing 727 aircraft A72-23467
- Operational aviation meteorological requirements, reviewing aircraft categories, ATC systems and avionics and navigational aids A72-25078
- NAVIGATION INSTRUMENTS**
- Flight testing of automated modular area navigation system for L-1011, describing computer, data storage and control-display units and electronic automatic chart system A72-24271

- Analysis of inertial navigation system performance to determine effects on aircraft safety and collision avoidance during flight over North Atlantic Ocean
[AD-733753] N72-18670
- Proceedings of conference on Omega navigation system and recommendations for modified hyperbolic navigation system
[NASA-CR-125807] N72-19718
- NAVION AIRCRAFT**
- Maximum likelihood technique used to extract aerodynamic parameters of Navion airplane from flight data
[NASA-TN-D-6643] N72-19019
- NEWTON-RAPHSON METHOD**
- Determining stability and control derivatives of airplanes from flight data using modified Newton-Raphson minimization technique
[NASA-TN-D-6579] N72-19659
- NICKEL ALLOYS**
- Ceramic fiber reinforced Ni base alloy for gas turbine blades, improving creep resistance at high temperatures
A72-22396
- NOISE GENERATORS**
- Aerodynamic noise generation mechanism of ideally expanded supersonic jet based on large scale flow instabilities, deriving mathematical model
A72-24331
- NOISE INTENSITY**
- Flight tests to determine methods for reducing airport community noise based on operationally optimum approach profiles
[NASA-CR-114417] N72-18001
- Experimental estimation methods for noise spectra and intensity from round jet
[AD-734042] N72-19338
- NOISE POLLUTION**
- Air and noise environmental pollution from B-1 aircraft
[PB-201711-F] N72-18033
- Aviation noise evaluations and projections for San Francisco Bay region
[PB-204035] N72-18035
- Environment pollution of turbine engine aircraft
N72-19030
- Jet aircraft noise pollution in airport vicinity
N72-19031
- NOISE REDUCTION**
- Aerodynamic noise produced by gas jet flow around airfoil, discussing sound reduction
A72-24107
- Flight tests to determine methods for reducing airport community noise based on operationally optimum approach profiles
[NASA-CR-114417] N72-18001
- Noise suppression capability of mixer nozzle used with externally blown flap augmentation system on STOL aircraft
[NASA-TM-X-68021] N72-18014
- Design and performance of filter resonators for helicopter noise reduction
[AD-734812] N72-19222
- NOISE SPECTRA**
- Experimental estimation methods for noise spectra and intensity from round jet
[AD-734042] N72-19338
- NONDESTRUCTIVE TESTS**
- Survey and analysis of application of nondestructive inspection methods to aircraft structures
[AGARD-R-587-71] N72-19541
- Nondestructive tests and their application for inspection of adhesive bonded structures, welded joints, and riveted or bolted joints
N72-19542
- Aircraft industry survey for analysis of nondestructive inspection methods application to commercial aircraft for 1968 to 1976
N72-19543
- NONLINEAR EQUATIONS**
- Approximate method for nonlinear differential equations of motion solution in flight dynamics, applying to control surface buzz and slender wing oscillations
A72-23453
- NONLINEAR SYSTEMS**
- Nonlinear dynamics of flight vehicle - Conference, University of Technology, Loughborough, England, March 1972
- Nonlinear dynamic motion response analysis of flight vehicles typified by continuously changing vibration damping and frequency
A72-23451
- Liapunov functional stability analysis in structural dynamics problems including wave equations with nonlinear damping
A72-23452
- Random vibration of linearly elastic lumped mass systems containing, nonlinear damping to ideal stationary Gaussian white noise excitation
A72-23457
- NOZZLE EFFICIENCY**
- Noise suppression capability of mixer nozzle used with externally blown flap augmentation system on STOL aircraft
[NASA-TM-X-68021] N72-18014
- NOZZLE FLOW**
- Aerodynamic throttling effect due to air jet flow interaction in throat region of mainstream two dimensional nozzle flow
A72-24845
- NUCLEAR ENERGY**
- Heat transfer research review, discussing gas turbines, aeronautics, astronautics, nuclear power, thermal pollution and controlled fusion challenges
A72-23684
- NUMERICAL ANALYSIS**
- Linearized solution for flow separation near tip and wake edge of lifting wing with trailing edge separation
[AD-734791] N72-19347
- OMEGA NAVIGATION SYSTEM**
- Proceedings of conference on Omega navigation system and recommendations for modified hyperbolic navigation system
[NASA-CR-125807] N72-19718
- OPTICAL DATA PROCESSING**
- Optical image filtering to simplify and facilitate automatic aerial photointerpretation processes
A72-23310
- OPTICAL RADAR**
- Lidar application to aircraft and missile tracking and rangefinding, describing results obtained with ONERA experimental equipment
A72-24655
- OPTICAL RANGE FINDERS**
- Lidar application to aircraft and missile tracking and rangefinding, describing results obtained with ONERA experimental equipment
A72-24655
- OPTICAL TRACKING**
- Lidar application to aircraft and missile tracking and rangefinding, describing results obtained with ONERA experimental equipment
A72-24655
- OPTIMAL CONTROL**
- Optimal control of two shaft gas turbine engine in helicopter, using cybernetic equipment
A72-22862
- Optimal control synthesis for linear passive stationary plants with symmetrical coefficient matrices of minimized functional
A72-23431
- Near optimal closed loop control laws for fixed time pursuit-evasion differential game between two aircraft in vertical plane, using dynamic modeling
A72-23805
- Derivation of differential equations for optimal feedback for constant linear system
[VTH-165] N72-19663
- OPTIMIZATION**
- Development trends in airborne man machine flight control, discussing optimal division between human pilot and machine in relation to total system performance and economic factors
A72-22781
- Optimal solutions for apportionment between automatic and manual flight control, considering number and types of displays required
A72-22783
- Deterministic optimization of aircraft undercarriage suspension characteristics for taxiing induced vibration minimization, discussing damping and

ORGANIZATIONS

stiffness functions and hybrid computer solution
A72-23458

Low speed performance and boundary layer growth in
optimal annular diffuser with uniform center body
diameter and conically diverging wall
A72-23856

Stochastic optimization of airborne laser seeker
system design parameters to maximize target
acquisition probability through regression
analysis of data from computerized model
A72-24682

Aircraft maintenance optimization, considering
safety, reliability, punctuality and cost factors
A72-25108

ORGANIZATIONS

Book on IATA organization and functions, discussing
international aviation history, conference
machinery, enforcement of conference resolutions,
air transportation economics, public corporations,
etc
A72-23846

P

P-3 AIRCRAFT

Computerized simulation used to obtain time optimal
trajectories for P-3C ASW aircraft
[AD-734167]
N72-19046

PAINTS

Evaluation of bisphenol polyether, styrene acrylate,
and chlorinated rubber alkyd as coatings for
airfield runway marking
[AD-734320]
N72-19644

PANELS

Evaluation of steady-state and nonsteady-state
methods for measuring panel damping with emphasis
on use of random process techniques and digital
data reduction methods
[NASA-CR-114423]
N72-18909

PARACHUTES

Pneumatically assisted parachute deployment at high
altitudes with low accelerations
A72-24273

PASSENGER AIRCRAFT

Computer simulation to determine capacity of air
terminal for short takeoff and landing intra-urban
air rapid transit system
[AD-733185]
N72-18660

Analysis of short haul aircraft transportation
system for San Francisco Bay area, California
[NASA-CR-2006]
N72-19021

Report of aircraft accident at Augusta, Maine
airport during landing approach of PA-31 aircraft,
August 1971
[NTSB-AAR-72-6]
N72-19028

PASSENGERS

Computerized simulation model for studying
performance of air bag
[PB-20417]
N72-19184

PAVEMENTS

Survey of runway pavement condition at US Naval Air
Station, Imperial Beach, California
[AD-733656]
N72-19304

PERFORMANCE

Performance tests of protective clothing to
determine effectiveness against air blast during
high speed ejection
N72-19147

PERFORMANCE PREDICTION

Experimental study of effect of blade aspect ratio
on performance of axial flow compressors
[ARC-CP-1179]
N72-19331

PERFORMANCE TESTS

Low speed performance and boundary layer growth in
optimal annular diffuser with uniform center body
diameter and conically diverging wall
A72-23856

Reliability program for SAAB 37 Viggen airborne
computer, discussing prototype and components
operating tests and failure rates
A72-23984

System for evaluation of aircraft diagnostic and
inspection equipment performance characteristics
[AD-733283]
N72-18041

Sensitivity of Fraunhofer line fluorometer for
photodensitometric dye concentration measurements
in water
[NASA-CR-125653]
N72-18450

SUBJECT INDEX

Performance tests of single-stage turbine with low
solidity jet flap rotor blade assembly using
various cavity pressure ratios, equivalent speeds,
and expansion ratios
[NASA-CR-1968]
N72-18994

Analysis of factors involved in performance and
environmental testing of military aircraft
[AD-734850]
N72-19054

Implementation of instrumentation techniques for
service testing of aircraft and airborne equipment
to meet military requirements
[AD-734306]
N72-19300

Transonic and blowdown-wind tunnels for high
Reynolds number testing
[AD-734648]
N72-19306

PHASE-SPACE INTEGRAL

Control synthesis equations for aircraft motion on
phase space surface
A72-22208

PHOTOINTERPRETATION

Optical image filtering to simplify and facilitate
automatic aerial photointerpretation processes
A72-23310

PHOTOSENSITIVITY

Sensitivity of Fraunhofer line fluorometer for
photodensitometric dye concentration measurements
in water
[NASA-CR-125653]
N72-18450

PILOT ERROR

Report of aircraft accident at Augusta, Maine
airport during landing approach of PA-31 aircraft,
August 1971
[NTSB-AAR-72-6]
N72-19028

PILOT PERFORMANCE

Psychological autopsy for analyzing immediate
psychodynamic processes leading to suicidal
aircraft accidents
[FAA-AA-72-2]
N72-19020

Simulation of wind, system data rate, and
contingency event variables during steep descent
of vertical lift aircraft under instrument
conditions to determine pilot performance
[AD-734702]
N72-19051

Analysis of aircraft accidents resulting from pilot
disorientation and vertigo during flights on
military aircraft and helicopters
[AD-735119]
N72-19053

PITCH (INCLINATION)

Integration method to derive angle of pitch,
flight-path angle, and angle of attack from
measurements in nonsteady flight
[VTH-156]
N72-19008

Wind tunnel tests to determine effectiveness of
cyclic pitch control on V/STOL aircraft for
longitudinal control during hover and transition
[AD-734237]
N72-19039

PITCHING MOMENTS

Pitching moments effect on phugoid and height mode
stability of aircraft in supersonic flight
A72-23622

PLANFORMS

Kernel function procedure for determining
aerodynamic forces of planforms using linearized
oscillating supersonic surface theory
[X-28-445]
N72-18999

PLASMA ARC WELDING

Ar-B microplasma welding of thin Cr steel sheets
with narrow seams for aircraft engines and
precision equipment casings
A72-22548

PLASTIC AIRCRAFT STRUCTURES

Titanium-boron-epoxy composite materials selection
and fracture mechanics criteria for B-1 bomber
structural design
A72-22477

PLATE THEORY

Simply supported skew plates stability under
combined loading, noting wing and tail design
applications for high speed aircraft and missiles
A72-24196

PNEUMATIC EQUIPMENT

Pneumatically assisted parachute deployment at high
altitudes with low accelerations
A72-24273

Slush drag, wheel spray, and hydroplaning research
using pneumatic wheels and moving runway and water
layer model test facilities
[ARC-R/M-3682]
N72-19035

- Application of fluidic pneumatic elements and systems for control of aircraft, missiles, and spacecraft
[AD-734715] N72-19343
- PODS (EXTERNAL STORES)**
Wind tunnel study of aerodynamic drag for engine pod and its elements including air intake and afterbody
[NASA-TT-F-14154] N72-18997
- POLYIMIDE RESINS**
Thermally stable laminating resins based on addition-type pyrolytic polymerization
[NASA-CR-72984] N72-18584
- POLYMERIC FILMS**
Evaluation of bisphenol polyether, styrene acrylate, and chlorinated rubber alkyd as coatings for airfield runway marking
[AD-734320] N72-19644
- POLYMERIZATION**
Thermally stable laminating resins based on addition-type pyrolytic polymerization
[NASA-CR-72984] N72-18584
- POSITION INDICATORS**
Electromagnetic position sensor for magnetically supported model in wind tunnel, discussing design, operation principles and performance
A72-24773
- POTENTIAL FLOW**
Lifting potential flow in terms of doublet distribution over body surface and trailing vortex sheet
[NAL-TR-243] N72-18281
- POWER EFFICIENCY**
Hydrothermodynamic foundations of hydrofoil engines employing gas-water mixtures and gas turbine generators, analyzing thrust coefficient and power efficiency
A72-25128
- POWER SPECTRA**
Nonlinear longitudinal aerodynamic characteristics effect on rigid aircraft response to normal acceleration due to atmospheric turbulence, using power spectral technique
A72-23461
- POWER SUPPLIES**
Development of methods for conducting climatic tests with emphasis on design, construction, and operation of climatic hangar
[AD-733299] N72-18268
- PREDICTION ANALYSIS TECHNIQUES**
Technique for predicting etiology of decompression sickness in unpressurized aircraft above 20,000 feet
[AD-731118] N72-19106
- PRESSURE DISTRIBUTION**
Pressure distribution on 45 deg swept half wing including effectiveness of upper surface spoiler as roll control
[ARC-CP-1184] N72-19032
- PRESSURE DRAG**
Base pressure drag reduction on rectangular wings with blunt trailing edges from low speed wind tunnel measurements
A72-24842
- PRESSURE GAGES**
Static pressure tube calibration for surface pressure measurements in flow over flat plate and airfoil
A72-22937
- PRESSURE GRADIENTS**
Pressure jumps lower bounds across supersonic transports induced shock waves in homogeneous atmosphere, using Whitham function in terms of Riemann integral
A72-24846
- PRESSURE MEASUREMENTS**
Static pressure tube calibration for surface pressure measurements in flow over flat plate and airfoil
A72-22937
- Pressure measurements on harmonically oscillating wing-tail configurations in incompressible speed range
[DLR-FB-71-54] N72-19024
- PRESSURE RECOVERY**
Pressure recovery calculation for subsonic adiabatic air flow through diffusers with tail pipes, assuming turbulent inlet boundary layer
A72-23855
- PRESSURE REDUCTION**
Technique for predicting etiology of decompression sickness in unpressurized aircraft above 20,000 feet
[AD-731118] N72-19106
- PRESSURE SENSORS**
German monograph on shaft and wall effect in aerodynamic measurements with three orifice pressure probes in wind tunnels
A72-22320
- Capacitive electret pressure sensors calibration for interior measurements in turbine engines, jets and exhaust nozzles
[ONERA, TP NO. 982] A72-22815
- PROBABILITY THEORY**
Probability estimates of aircraft encounters with hail, discussing variations with locality, hailstone size and height and supersonic transport experience
A72-23423
- Commercial aircraft reliability program development from informal continuous product improvement to formalized methods based on reliability logic diagrams and probability calculations
A72-24019
- PROJECT DEVELOPMENT**
Commercial aircraft reliability program development from informal continuous product improvement to formalized methods based on reliability logic diagrams and probability calculations
A72-24019
- PRODUCTION ENGINEERING**
Quantitative definitions for maintainability and maintenance measurements
N72-18023
- Casting instruction manual for steels and aluminum, magnesium and copper alloys in aeronautical manufacturing
[RAE-LIB-TRANS-1557] N72-18501
- PROJECT MANAGEMENT**
Management planning and operation of test facilities for effective application to development of systems and equipment for aerospace vehicles
[AD-731548] N72-19307
- PROPELLER EFFICIENCY**
Computer program for determining characteristics of propellers used in general aviation aircraft to include blade shape parameter and integrated design lift coefficient
[NASA-CR-114399] N72-18004
- PROPELLER FANS**
Variable pitch fans for STOL aircraft thrust/shaft engine, noting short field capability and quietness
A72-23447
- PROPELLERS**
Computer program for determining characteristics of propellers used in general aviation aircraft to include blade shape parameter and integrated design lift coefficient
[NASA-CR-114399] N72-18004
- Wind tunnel tests to determine longitudinal control capability of four propeller, tilt wing aerodynamic configuration with cyclic pitch propellers
[AD-734236] N72-19040
- PROPULSION SYSTEM CONFIGURATIONS**
Selection of engine parameters for various types of aircraft to maximize aircraft performance and meet constraints imposed by design and operational requirements
[NASA-TN-X-68009] N72-18769
- Fan and wing force data on wind tunnel model of VTOL lift fan in two dimensional wing, with and without exit louvers
[NASA-TN-D-6654] N72-18775
- PROPULSION SYSTEM PERFORMANCE**
Selection of engine parameters for various types of aircraft to maximize aircraft performance and meet constraints imposed by design and operational requirements
[NASA-TN-X-68009] N72-18769
- PROTECTIVE CLOTHING**
Performance tests of protective clothing to determine effectiveness against air blast during high speed ejection
N72-19147
- PSYCHIATRY**
Psychological autopsy for analyzing immediate

PULSE RADAR

SUBJECT INDEX

psychodynamic processes leading to suicidal aircraft accidents
[FAA-AM-72-2] N72-19020

PULSE RADAR
C-band pulse beacon ranging system for collision avoidance, detailing interrogation, response and system test modes A72-22908

PYROLYSIS
Thermally stable laminating resins based on addition-type pyrolytic polymerization [NASA-CR-72984] N72-18584
Gas chromatography-mass spectrometry analysis of gaseous products arising from commercial aircraft cable coating pyrolysis [RAE-TR-71134] N72-19636

Q

QUALITY CONTROL
Development of maintenance quality audit program and application to maintenance of commercial aircraft N72-18015
Development of procedures for conducting structural inspection program on DC-10 aircraft to reduce effects of crack propagation with increased service life N72-18019
Application of fracture mechanics to design, analysis, and qualification of aircraft structural systems [AD-731565] N72-18045

QUEUEING THEORY
Reliability design for airborne ecological system for jumbo jets, discussing toilet flushing and multiple server queueing model A72-23999

R

RADAR APPROACH CONTROL
ILS development, discussing four course radio ranges, autoland and radar systems A72-23449

RADAR BEACONS
C-band pulse beacon ranging system for collision avoidance, detailing interrogation, response and system test modes A72-22908

RADAR DATA
Radar data statistical evaluation, emphasizing mean Doppler shift for aircraft radial velocity calculation A72-22897

RADAR EQUIPMENT
Airport meteorological instrumentation, discussing ground wind, visibility, cloud height, air temperature and humidity detectors and radar equipment A72-25093
Onboard aircraft and missile radar systems for interception of airborne targets N72-18158
UTES multipurpose radar complex for air traffic control [AD-733273] N72-18173

RADAR MEASUREMENT
Noncontacting measurements by miniature CW Doppler radar with semiconductor microwave generator A72-22691

RADIAL FLOW
Compressible flow measurement and loss prediction in radial vaneless diffuser in centrifugal compressor, using hot-wire anemometers A72-23861

RADIAL VELOCITY
Radial velocity distribution at supersonic compressor inlet from duct-cowl and wall pressure measurements [ONERA, TP NO. 975] A72-22812
Radar data statistical evaluation, emphasizing mean Doppler shift for aircraft radial velocity calculation A72-22897

RADIO BEACONS
ILS development, discussing four course radio ranges, autoland and radar systems A72-23449

Very high frequency radio beacon system for location marking in jungle [AD-733916] N72-19725

RADIOACTIVE ISOTOPIES
Contactless measurement of tip clearance in jet engine turbine based on radioactive isotope properties [AD-734912] N72-19856

RADIOMETERS
Micrometeorologic measurements of earth surface temperature by airborne radiometers [NASA-TT-F-14139] N72-18621
Clear air turbulence radiometric detection program for alerting aircraft [AD-733762] N72-18641

RANDOM VIBRATION
Random vibration of linearly elastic lumped mass systems containing, nonlinear damping to ideal stationary Gaussian white noise excitation A72-23460

RANGE FINDERS
C-band pulse beacon ranging system for collision avoidance, detailing interrogation, response and system test modes A72-22908

REACTOR MATERIALS
High temperature Co-base alloy for nuclear, chemical and reentry vehicle applications A72-22478

REAL TIME OPERATION
ATC systems analysis by computerized real time environmental simulation, taking into account new aircraft types, navigation and supervision aids A72-22782
Laser recording real time imagery for use in tactical reconnaissance aircraft A72-23928
Real time pilot reports via digital ground-air-ground data link, discussing encoding and processing equipment, meteorological codes and automatic real time weather forecasts A72-25079
Computer graphic simulation of air transportation system [AD-733752] N72-18669

RECONNAISSANCE AIRCRAFT
Laser recording real time imagery for use in tactical reconnaissance aircraft A72-23928

RECORDING INSTRUMENTS
Laser recording real time imagery for use in tactical reconnaissance aircraft A72-23928
Multichannel voice recorder-reproducer sets for air traffic control [AD-731562] N72-18180

RECTANGULAR WINGS
Base pressure drag reduction on rectangular wings with blunt trailing edges from low speed wind tunnel measurements A72-24842

REENTRY VEHICLES
High temperature Co-base alloy for nuclear, chemical and reentry vehicle applications A72-22478

REFLECTANCE
Evaluation of bisphenol polyether, styrene acrylate, and chlorinated rubber alkyd as coatings for airfield runway marking [AD-734320] N72-19644

REFLECTION
Influence of reflections on acoustic pressure spectra of turbojets [NASA-TT-F-14185] N72-19737

REFRACTORY METALS
Metallurgical problems of metals used in spacecraft structures and propulsion systems [CRANFIELD-NAT-6] N72-18545

REGRESSION ANALYSIS
Stochastic optimization of airborne laser seeker system design parameters to maximize target acquisition probability through regression analysis of data from computerized model A72-24682

REINFORCED PLASTICS
Development of technique for analysis of instability of glass fiber reinforced plastic panels under axial compression [AD-734340] N72-19642

REINFORCING FIBERS

Ceramic fiber reinforced Ni base alloy for gas turbine blades, improving creep resistance at high temperatures

A72-22396

RELIABILITY ENGINEERING

Reliability program for SAAB 37 Viggen airborne computer, discussing prototype and components operating tests and failure rates

A72-23984

Reliability design for airborne ecological system for jumbo jets, discussing toilet flushing and multiple server queueing model

A72-23999

Reliable interconnections for U.S. Army avionics, determining best technique for terminating flat conductor cables with electrical connectors

A72-24012

Commercial aircraft reliability program development from informal continuous product improvement to formalized methods based on reliability logic diagrams and probability calculations

A72-24019

Development of maintenance quality audit program and application to maintenance of commercial aircraft

N72-18015

Development of procedures for conducting structural inspection program on DC-10 aircraft to reduce effects of crack propagation with increased service life

N72-18019

Effect of maintenance procedures on causes of aircraft accidents and statistical analysis of improved aircraft safety through elimination of maintenance faults

N72-18021

Organization and operation of Federal Aviation Administration Maintenance Analysis Center

N72-18022

Performance tests of protective clothing to determine effectiveness against air blast during high speed ejection

N72-19147

REMOTE SENSORS

Sensors for data acquisition systems for earth observations by spacecraft or aircraft

[NASA-TM-X-62107]

N72-18199

Fraunhofer line discriminator as remote sensor of fluorescent dyes used in pollution detection

[NASA-CR-125643]

N72-18448

Use of multisensors in aerial reconnaissance/surveillance missions

[AD-733347]

N72-18464

REPRODUCTION (COPYING)

Multichannel voice recorder-reproducer sets for air traffic control

[AD-731562]

N72-18180

RESCUE OPERATIONS

Requirements for airborne rescue system in military search and rescue missions

[AD-733987]

N72-18047

RESEARCH FACILITIES

Sonic boom research facilities and techniques, emphasizing applicability to other environmental problems

A72-23317

Environmental impact of NASA Flight Research Center, Edwards, California

[PB-202054-F]

N72-19027

RESEARCH PROJECTS

Scientific and technological research projects

N72-18242

RETRACTABLE EQUIPMENT

Glass-vinyl retractable windshield visor development for Concorde aircraft, considering rain, hail and icing effects, strength and stiffness under aerodynamic loading and heating

A72-22900

REYNOLDS NUMBER

Laminar/turbulent boundary layer transition on parabolic wing profile in supersonic wind tunnel, noting critical Reynolds number increase with leading edge thickness

A72-22407

Wind tunnel investigation of Reynolds number effects on boundary layer separation incidence and maximum lift coefficient of high-lift device equipped aircraft model

A72-24657

RIGID ROTORS

Wind tunnel tests to determine dynamic characteristics of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 1

[NASA-CR-114427]

N72-18024

Compilation of data obtained from wind tunnel tests of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 2

[NASA-CR-114428]

N72-18025

RING WINGS

Structural design and performance tests on low drag ringwing-body configurations

[NLR-TR-69070-U]

N72-17993

RISK

Technology forecasting and risk assessment in V/STOL transport area, examining mission issues and selection criteria

A72-22473

RIVETED JOINTS

Nondestructive tests and their application for inspection of adhesive bonded structures, welded joints, and riveted or bolted joints

N72-19542

RIVETING

Automatic riveting machine for fuel tight aircraft structures, describing process technique and machine design details and features

A72-22906

ROLL

Slender wings in roll noting dependence of rolling moment and roll damping on angular velocity and angle of attack

N72-19004

ROLLING MOMENTS

Slender wings in roll noting dependence of rolling moment and roll damping on angular velocity and angle of attack

N72-19004

Equations for angles of attack and sideslip relative to rolling and nonrolling axis system

[NASA-TM-X-2514]

N72-19721

ROTARY WINGS

Wind tunnel tests of models of helicopter rotary wings to determine blade element airloads in unstalled and stalled flight regimes

[NASA-CR-114424]

N72-18005

Wind tunnel tests to determine dynamic characteristics of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 1

[NASA-CR-114427]

N72-18024

Compilation of data obtained from wind tunnel tests of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 2

[NASA-CR-114428]

N72-18025

Bending response of rotary wing blades when subjected to random input velocities for both hinged and unhinged cases of root end fixity

[AD-732395]

N72-18028

Aerodynamic performance of lifting helicopter rotor during vertical descent

[AD-734229]

N72-19011

Application of ring vortex method for determining aerodynamic characteristics of rotary wings and design of lifting rotor systems

[AD-735018]

N72-19013

Flight tests to determine characteristics of blade slap in rotary wings and effect on helicopter performance

[NASA-CR-1983]

N72-19026

Full scale wind tunnel investigation of advancing blade concept rotor system

[AD-734338]

N72-19038

Vortex shredding noise characteristics of isolated airfoils in Reynolds number range applicable to full scale helicopter rotors

[AD-734433]

N72-19048

Visualization of unsteady flow around oscillating airfoils and rotary wings, and within turbomachines in hydraulic tunnels

[ONERA-NT-180]

N72-19329

Analysis of helicopter rotary wing performance with recirculatory flow visualization during wind tunnel tests

[AD-734873]

N72-19352

ROTATING FLUIDS

Rotational, centrifugal and Coriolis force effects on turbulent boundary layer development,

ROTATION

discussing changes in structure and shear stress distribution
A72-23870

ROTATION
Eight position, solid state, rotary switch
[AD-734758] N72-19277

ROTOR AERODYNAMICS
General solution for thin airfoil rectilinear motion in ideal incompressible gas, applying to rotor blade lift calculation
A72-22860

ROTOR BLADES
General solution for thin airfoil rectilinear motion in ideal incompressible gas, applying to rotor blade lift calculation
A72-22860

Aerodynamic design and performance of axial flow compressor rotor with tip speed of 1380 feet per second and 1.1 blade tip solidity
[NASA-TN-X-2449] N72-18998

Full scale wind tunnel investigation of advancing blade concept rotor system
[AD-734338] N72-19038

ROTOR BLADES (TURBOMACHINERY)
Performance tests of single-stage turbine with low solidity jet flap rotor blade assembly using various cavity pressure ratios, equivalent speeds, and expansion ratios
[NASA-CR-1968] N72-18994

Experimental study of effect of blade aspect ratio on performance of axial flow compressors
[ARC-CP-1179] N72-19331

RUNWAY CONDITIONS
Runway fog dispersal system based on underground installed flight-discarded turbojet engines, discussing system efficiency and economics
A72-22910

Runway unevenness and landing gear characteristics effects on SSR vibration during taxiing, taking off and landing
A72-23459

Survey of runway pavement condition at US Naval Air Station, Imperial Beach, California
[AD-733656] N72-19304

RUNWAYS
Anthropotechnical aspects of aircraft taxiing guidance in airfield runway areas, suggesting computerized operational system
A72-22779

Optimal high capacity runway systems for major airports, discussing multiple systems in anticipation of future mass air traffic requirements
A72-24169

Evaluation of bisphenol polyether, styrene acrylate, and chlorinated rubber alkyl as coatings for airfield runway marking
[AD-734320] N72-19644

S

SAFETY DEVICES
Collision avoidance systems requirements and criteria, evaluating Eros time frequency and Secant interrogation-and-reply systems
A72-22822

Computerized simulation model for studying performance of air bag
[PB-20417] N72-19184

SAFETY FACTORS
Air traffic control models and simulations for evaluating traffic flow, safety, and system loading aspects - bibliographies
[AD-733755] N72-18666

SAFETY MANAGEMENT
Effect of maintenance procedures on causes of aircraft accidents and statistical analysis of improved aircraft safety through elimination of maintenance faults
N72-18021

SATELLITE OBSERVATION
Impact of inertial navigation on air safety and modeling techniques to assess effects of air traffic control satellite surveillance system
[AD-733758] N72-18667

SCALE (CORROSION)
Polishes and corrosion removers for aluminum surfaces of Naval aircraft
[AD-733403] N72-18602

SUBJECT INDEX

SEARCH RADAR
Search radar monitoring of bird movements to prevent aircraft collision accidents
[AD-732945] N72-18027

UTES multipurpose radar complex for air traffic control
[AD-733273] N72-18173

SECONDARY FLOW
Secondary losses reduction procedure in axial flow turbine stages, using boundary layer fences on blades profile suction side
A72-22634

Centrifugal turboengine diffuser with high enlargement area compared with logarithmic spiral types, discussing boundary layers, secondary flow, shapes and aerodynamic parameters
A72-23747

SELF LUBRICATION
Differential thermal analysis of self lubricating bearing systems
[AD-732761] N72-18588

SEMICONDUCTOR DEVICES
Noncontacting measurements by miniature CW Doppler radar with semiconductor microwave generator
A72-22691

SEPARATED FLOW
Wind tunnel diffuser design for separated region spread reduction based on egg box principle
A72-23859

Supersonic flow around thin cruciform wing with antisymmetrical angle of attack distribution and horizontal plane with leading edge, considering flow separation at edges
A72-25118

Mathematical model for effects of conical thickness distribution on separated flow past slender delta wings with small thickness/span ratios and sharp leading edges
[ARC-CP-1189] N72-19006

Linearized solution for flow separation near tip and wake edge of lifting wing with trailing edge separation
[AD-734791] N72-19347

SERVICE LIFE
Thin wall airframe wire insulation relative thermal life and temperature rating evaluation procedure using Arrhenius plot
A72-23270

SERVOMECHANISMS
Effect of high temperature hydraulic fluid on operation of control surface servovalves installed on T-38 aircraft
[AD-734259] N72-19042

SHEAR FLOW
Turbulent shear stress and kinetic energy characteristics of subsonic air flow in straight conical diffuser, using hot-wire anemometry measurements
A72-23862

Aerodynamic forces calculation for constant vortex shear flows around airfoil fixed between rectilinear walls, noting resultant perpendicularity to Ox axis
A72-24115

SHEAR STRESS
Rotational, centrifugal and Coriolis force effects on turbulent boundary layer development, discussing changes in structure and shear stress distribution
A72-23870

SHOCK ABSORBERS
Higher order forces effect on shock absorbing systems of masses interconnected by elastic and damping members of aircraft landing gears
A72-22861

SHOCK WAVE INTERACTION
Book on ideal and real compressible fluid dynamics covering supersonic flow past airfoils and shock wave interaction with laminar boundary layer
A72-23045

SHOCK WAVE PROPAGATION
Sonic booms generation and propagation, discussing effects on animate and inanimate objects
A72-23316

Wind tunnel investigation of shock impingement caused by boundary layer separation ahead of blunt fins

[RM-536] N72-18285

SHOCK WAVES

Sonic boom effects on structures, discussing ground motion, direct excitation by shock waves and damages A72-23318

Pressure jumps lower bounds across supersonic transports induced shock waves in homogeneous atmosphere, using Whitham function in terms of Riemann integral A72-24846

Airfoil configurations to eliminate undesirable shock boundary layer interactions [AD-731566] N72-17998

Calculation of shock wave reflection in supersonic inlets using method of characteristics including Mach disc problem [ONERA-NT-183] N72-19005

SHORT HAUL AIRCRAFT

Analysis of short haul aircraft transportation system for San Francisco Bay area, California [NASA-CR-2006] N72-19021

SHORT TAKEOFF AIRCRAFT

Variable pitch fans for STOL aircraft thrust/shaft engine, noting short field capability and quietness A72-23447

STOL and V/STOL transport aircraft design requirements consideration based on common propulsion and lift engine types use, noting fan lift solution superiority A72-24865

Noise suppression capability of mixer nozzle used with externally blown flap augmentation system on STOL aircraft [NASA-TN-X-68021] N72-18014

Computer simulation to determine capacity of air terminal for short takeoff and landing intra-urban air rapid transit system [AD-733185] N72-18660

Evaluation of takeoff and landing performance of commercial STOL airplanes [NASA-TT-F-14166] N72-19023

Noise data obtained with small scale model of externally blown flap of type being considered for STOL aircraft [NASA-TN-D-6636] N72-19025

Linearized mathematical models with stability derivatives and equations of motion for two representative STOL aircraft [AD-733756] N72-19036

SIDESLIP

Equations for angles of attack and sideslip relative to rolling and nonrolling axis system [NASA-TN-X-2514] N72-19721

SIMILARITY THEOREM

Mixing length flow model for two- and three-dimensional turbulent boundary layers in compressible and incompressible flows using similarity equations N72-19327

SIMILITUDE LAW

Two and three dimensional turbulent boundary layers integral calculation method, presenting similarity solutions based on extended mixing length model A72-24653

SIMULATION

Magnetic simulation of gravity for wind tunnel investigations of aircraft jettison processes, considering Proude number and relationships between model and full scale aircraft A72-24775

Linear and angular acceleration terminology, human acceleration simulation, airplane airbag restraint systems, and mathematical models of automobile crash loads N72-19155

SKIN (STRUCTURAL MEMBER)

Corrosion resistant fabrication methods in jumbo jetliners components to reduce maintenance and repair downtime, discussing clad wing and fuselage skins A72-24025

SLENDER BODIES

Slender body theory for flow calculation past low aspect ratio delta wing with straight trailing edge, noting lifting vortices distribution A72-25131

SLENDER CONES

Magnetic balance measurements of aerodynamic forces on spheres and slender cones in hypersonic low density wind tunnels, noting sting effect A72-24771

SLENDER WINGS

Static aerodynamic characteristics of bulbous based cone models and slender wings at subsonic speed, using magnetic suspension and balance system A72-24769

Slender wings in roll noting dependence of rolling moment and roll damping on angular velocity and angle of attack N72-19004

Mathematical model for effects of conical thickness distribution on separated flow past slender delta wings with small thickness/span ratios and sharp leading edges [ARC-CP-1189] N72-19006

SLIPSTREAMS

Plane laminar semibounded incompressible fluid jet propagation into slipstream along moving plate, solving boundary layer equations A72-25136

SOLID STATE DEVICES

Eight position, solid state, rotary switch [AD-734758] N72-19277

Development and characteristics of microelectronic equipment for improved reliability and reduced weight and size of electronic components N72-19484

SONIC BOOMS

Sonic booms generation and propagation, discussing effects on animate and inanimate objects A72-23316

Sonic boom research facilities and techniques, emphasizing applicability to other environmental problems A72-23317

Sonic boom effects on structures, discussing ground motion, direct excitation by shock waves and damages A72-23318

Field and laboratory sonic boom simulators, noting required characteristics A72-23323

SOUND GENERATORS

Field and laboratory sonic boom simulators, noting required characteristics A72-23323

SOUND PRESSURE

Influence of reflections on acoustic pressure spectra of turbojets [NASA-TT-F-14185] N72-19737

SOUND WAVES

Surface acoustic wave technology in communication systems, discussing analog and digital matched filters and navigation, ATC and collision avoidance applications A72-24940

SPACE SHUTTLES

Flight tests of low lift to drag ratio approach and landing using CV 990 aircraft with similar size and performance characteristics of proposed space shuttle vehicle [NASA-TN-D-6732] N72-19022

SPACE VEHICLE CHECKOUT PROGRAM

Development of integrated system for performing checkout of space launchers and aircraft systems N72-19489

SPACECRAFT COMMUNICATION

Microwave equipment and technology application for instrument landing, terminal ATC, millimeter wave CAT detection and satellite communications A72-24036

SPACECRAFT PROPULSION

Metallurgical problems of metals used in spacecraft structures and propulsion systems [CRANFIELD-MAT-6] N72-18545

SPACECRAFT STRUCTURES

Metallurgical problems of metals used in spacecraft structures and propulsion systems [CRANFIELD-MAT-6] N72-18545

SPHERES

Magnetic balance measurements of aerodynamic forces on spheres and slender cones in hypersonic low density wind tunnels, noting sting effect A72-24771

SPIN

Literature survey of spin research and application to aircraft design
[AD-734976] N72-19050

SPIN STABILIZATION

Effectiveness evaluation of automatic spin prevention system for fighter aircraft
[NASA-TN-D-6670] N72-18012

SPOILERS

Pressure distribution on 45 deg swept half wing including effectiveness of upper surface spoiler as roll control
[ARC-CP-1184] N72-19032

STABILITY DERIVATIVES

Aerodynamic force and moment measurements on model in magnetic wind tunnel balance system, using field equations
A72-24765

Linearized mathematical models with stability derivatives and equations of motion for two representative STOL aircraft
[AD-733756] N72-19036

STABILIZED PLATFORMS

Design, development, characteristics, and applications of gyroscopic devices
[AD-733275] N72-18662

Flight tests of strapdown inertial navigation system in helicopter to determine feasibility for simulating systems using inertial navigation equipment
[AD-733430] N72-18663

STABILIZERS (FLUID DYNAMICS)

Flight test of three-axis fluidic stability augmentation system for UH-1 helicopter
[AD-734343] N72-19043

STANDARDS

Thin wall airframe wire insulation relative thermal life and temperature rating evaluation procedure using Arrhenius plot
A72-23270

Airborne VHF omnirange /VOR/ systems minimum operational standards for navigation and communication in air traffic control
A72-24725

Aviation safety measures for aircraft reliability and flight control
N72-18017

STATIC AERODYNAMIC CHARACTERISTICS

Static aerodynamic characteristics of bulbous based cone models and slender wings at subsonic speed, using magnetic suspension and balance system
A72-24769

STATIC INVERTERS

Feasibility analysis of variable speed constant frequency inverter system using dc link approach for aircraft use
[AD-734067] N72-19065

STATIC PRESSURE

Static pressure tube calibration for surface pressure measurements in flow over flat plate and airfoil
A72-22937

STATISTICAL ANALYSIS

Radar data statistical evaluation, emphasizing mean Doppler shift for aircraft radial velocity calculation
A72-22897

Statistical evaluation of welded airframe component fatigue damage increment during cyclic loading with constant force amplitude
A72-24922

Statistical analysis of counting accelerometer data for normal acceleration of fleet aircraft
[AD-733678] N72-18468

STEADY FLOW

Equations of motion of steady viscous fluid flow in three dimensional boundary layer on walls of axial flow compressors and turbines, obtaining velocity field
A72-25120

Aerodynamic characteristics of bomb in steady, incompressible, potential flow based on model
[AD-733325] N72-18037

STEADY STATE

Transient characteristics and steady state off-design operation of mixed and unmixed type turbofan engines, noting peculiarities in control characteristics
A72-22626

STEERABLE ANTENNAS

Radiation patterns from adaptive loop antenna arrays for aircraft communication systems
[AD-735096] N72-19230

STOCHASTIC PROCESSES

Stochastic optimization of airborne laser seeker system design parameters to maximize target acquisition probability through regression analysis of data from computerized model
A72-24682

STRAPDOWN INERTIAL GUIDANCE

Flight tests of strapdown inertial navigation system in helicopter to determine feasibility for simulating systems using inertial navigation equipment
[AD-733430] N72-18663

STRATOSPHERE

Horizontal temperature variations relation to stratospheric CAT based on U-2 flight data
A72-22438

Observations of clear air turbulence in stratosphere by high altitude subsonic aircraft
[NLL-H-22069-(5828.4F)] N72-19682

STRATOSPHERE RADIATION

High resolution observation of stratospheric submillimeter thermal emission spectrum by helium-cooled InSb electron bolometer on board Comet 2E aircraft
A72-25023

STRESS CONCENTRATION

Rotational, centrifugal and Coriolis force effects on turbulent boundary layer development, discussing changes in structure and shear stress distribution
A72-23870

STRESS CORROSION

Environmental tests to determine behavior of titanium alloys under hot salt, stress corrosion conditions existing in jet engines
[NASA-TM-X-68015] N72-18541

STRUCTURAL ANALYSIS

Evaluation of steady-state and nonsteady-state methods for measuring panel damping with emphasis on use of random process techniques and digital data reduction methods
[NASA-CR-114423] N72-18909

Weight estimation and analysis of major structural components of hypersonic, liquid hydrogen fueled aircraft
[NASA-TN-D-6692] N72-18911

STRUCTURAL DESIGN

Titanium-boron-epoxy composite materials selection and fracture mechanics criteria for B-1 bomber structural design
A72-22477

Aerodynamic design and performance of axial flow compressor rotor with tip speed of 1380 feet per second and 1.1 blade tip solidity
[NASA-TM-X-2449] N72-18998

STRUCTURAL ENGINEERING

Application of fracture mechanics to design, analysis, and qualification of aircraft structural systems
[AD-731565] N72-18045

STRUCTURAL FAILURE

Sonic boom effects on structures, discussing ground motion, direct excitation by shock waves and damages
A72-23318

STRUCTURAL STABILITY

Simply supported skew plates stability under combined loading, noting wing and tail design applications for high speed aircraft and missiles
A72-24196

STRUCTURAL VIBRATION

Nonlinear dynamic motion response analysis of flight vehicles typified by continuously changing vibration damping and frequency
A72-23452

Runway unevenness and landing gear characteristics effects on SST vibration during taxiing, taking off and landing
A72-23459

Hydrodynamic forces in sinusoidal vibrations of disk in water channel with toroidal vorticity wake pattern, applying results to flapping wing mechanics
A72-25129

STRUCTURAL WEIGHT

Wing structural weight estimation for civil aircraft preliminary deriving generalized formula based on wing root bending moment for specified flight condition

A72-22909

SUBMILLIMETER WAVES

High resolution observation of stratospheric submillimeter thermal emission spectrum by helium-cooled InSb electron bolometer on board Comet 2B aircraft

A72-25023

SUBSONIC AIRCRAFT

Observations of clear air turbulence in stratosphere by high altitude subsonic aircraft [NLL-M-22069-(5828.4P)]

N72-19682

SUBSONIC FLOW

Supersonic and subsonic jet flows coexistence in constant section duct, analyzing pressure on walls and in fluid and schlieren visualization [ONERA, TP NO. 976]

A72-22813

Pressure recovery calculation for subsonic adiabatic air flow through diffusers with tail pipes, assuming turbulent inlet boundary layer

A72-23855

Iron rotational hysteresis effect in cold magnetic balance wind tunnel system for spinning aircraft configurations and subsonic flow regimes

A72-24776

Subsonic unsteady aerodynamic pressures on blades of compressor wheel rotating freely in air stream

A72-24854

SUBSONIC WIND TUNNELS

Full scale wind tunnel investigation of advancing blade concept rotor system [AD-734338]

N72-19038

Subsonic wind tunnel for testing full scale aircraft [NASA-TN-X-62106]

N72-19291

SULFUR FLUORIDES

Airborne gas chromatograph for real time diffusion analyses, describing flight test results with sulfur hexafluoride plumes

A72-22451

SUPERCAVITATING FLOW

Integrodifferential equation for rigid tunnel walls effect on supercavitating flow past thin jet flapped airfoil, noting lift coefficient derivatives

A72-24562

SUPERCONDUCTING MAGNETS

Superconducting magnetic suspension and balance facility of supersonic wind tunnel for dynamic stability studies

A72-24757

Data acquisition and reduction for model aerodynamics in superconducting magnetic suspension and balance of supersonic wind tunnel facility

A72-24766

SUPERCONDUCTORS

Superconducting coil design for magnetic suspension of supersonic wind tunnel balance

A72-24759

SUPERSONIC AIRFOILS

Airfoil configurations to eliminate undesirable shock boundary layer interactions [AD-731566]

N72-17998

SUPERSONIC COMPRESSORS

Radial velocity distribution at supersonic compressor inlet from duct-cowl and wall pressure measurements [ONERA, TP NO. 975]

A72-22812

Acoustic measurements of aerodynamic noise in low supersonic operation of axial flow compressor [NASA-CR-125811]

N72-19849

SUPERSONIC FLIGHT

Pitching moments effect on phugoid and height mode stability of aircraft in supersonic flight

A72-23622

SUPERSONIC FLOW

Book on ideal and real compressible fluid dynamics covering supersonic flow past airfoils and shock wave interaction with laminar boundary layer

A72-23045

Supersonic flow around thin cruciform wing with antisymmetrical angle of attack distribution and horizontal plane with leading edge, considering flow separation at edges

A72-25118

Jet noise suppression by splitting supersonic nozzle flow into separate jets by overexpansion into multilobed divergent nozzle

[NASA-TN-D-6667]

N72-17990

SUPERSONIC FLUTTER

Kernel function procedure for determining aerodynamic forces of planforms using linearized oscillating supersonic surface theory [X-28-445]

N72-18999

SUPERSONIC INLETS

Radial velocity distribution at supersonic compressor inlet from duct-cowl and wall pressure measurements [ONERA, TP NO. 975]

A72-22812

Transonic and supersonic wind tunnel test data on intake performance of supersonic mixed compression inlet flow [NASA-CR-1977]

N72-18786

Calculation of shock wave reflection in supersonic inlets using method of characteristics including Mach disc problem [ONERA-NT-183]

N72-19005

SUPERSONIC JET FLOW

Supersonic and subsonic jet flows coexistence in constant section duct, analyzing pressure on walls and in fluid and schlieren visualization [ONERA, TP NO. 976]

A72-22813

Aerodynamic noise generation mechanism of ideally expanded supersonic jet based on large scale flow instabilities, deriving mathematical model

A72-24331

SUPERSONIC SPEEDS

Flight test analysis of flow characteristics of air intake system of F-111A aircraft at supersonic speed [NASA-TN-D-6679]

N72-18996

Free flight measurement of blunt leading edge caret wing pressure and heat transfer at supersonic speeds [ARC-R/M-3679]

N72-19007

SUPERSONIC TRANSPORTS

Probability estimates of aircraft encounters with hail, discussing variations with locality, hailstone size and height and supersonic transport experience

A72-23423

Runway unevenness and landing gear characteristics effects on SST vibration during taxiing, taking off and landing

A72-23459

Pressure jumps lower bounds across supersonic transports induced shock waves in homogeneous atmosphere, using Whitham function in terms of Riemann integral

A72-24846

Flight safety standards and air traffic control problems of supersonic aircraft passenger service [NASA-TT-P-13952]

N72-18000

SUPERSONIC WIND TUNNELS

Laminar/turbulent boundary layer transition on parabolic wing profile in supersonic wind tunnel, noting critical Reynolds number increase with leading edge thickness

A72-22407

Superconducting magnetic suspension and balance facility of supersonic wind tunnel for dynamic stability studies

A72-24757

Superconducting coil design for magnetic suspension of supersonic wind tunnel balance

A72-24759

Data acquisition and reduction for model aerodynamics in superconducting magnetic suspension and balance of supersonic wind tunnel facility

A72-24766

Single screw variable nozzle for varying Mach number in supersonic wind tunnels [BR-018]

N72-18256

SURFACE FINISHING

Polishes and corrosion removers for aluminum surfaces of Naval aircraft [AD-733403]

N72-18602

SURFACE REACTIONS

Pressure distribution on 45 deg swept half wing including effectiveness of upper surface spoiler as roll control [ARC-CP-1184]

N72-19032

SURFACE ROUGHNESS EFFECTS

SUBJECT INDEX

SURFACE ROUGHNESS EFFECTS

Runway unevenness and landing gear characteristics effects on SST vibration during taxiing, taking off and landing

A72-23459

SURFACE TEMPERATURE

Micrometeorologic measurements of earth surface temperature by airborne radiometers
[NASA-TT-F-14139]

N72-18621

SURFACE WAVES

Surface acoustic wave technology in communication systems, discussing analog and digital matched filters and navigation, ATC and collision avoidance applications

A72-24940

SURVEILLANCE

Use of multisensors in aerial reconnaissance/surveillance missions
[AD-733347]

N72-18464

SURVEILLANCE RADAR

Electronics and data processing technology effects on radar state of art, discussing automated air traffic control surveillance systems

A72-24490

SUSPENSION SYSTEMS (VEHICLES)

Deterministic optimization of aircraft undercarriage suspension characteristics for taxiing induced vibration minimization, discussing damping and stiffness functions and hybrid computer solution

A72-23458

SWEEP ANGLE

Velocities induced by distributions of infinite kinked sources and vortex lines representing wings with sweep and dihedral in incompressible flow
[ARC-R/M-3667]

N72-19332

SWEPT WINGS

Pressure measurements on harmonically oscillating wing-tail configurations in incompressible speed range
[DLR-FB-71-54]

N72-19024

Pressure distribution on 45 deg swept half wing including effectiveness of upper surface spoiler as roll control
[ARC-CP-1184]

N72-19032

SWITCHING CIRCUITS

Eight position, solid state, rotary switch
[AD-734758]

N72-19277

SYSTEM FAILURES

Reliability program for SAAB 37 Viggen airborne computer, discussing prototype and components operating tests and failure rates

A72-23984

SYSTEMS ANALYSIS

Ground based ATC information processing systems analysis, considering controllers work load

A72-22778

ATC systems analysis by computerized real time environmental simulation, taking into account new aircraft types, navigation and supervision aids

A72-22782

Analysis of incompatibility between ground and airborne measurements of VOR space modulation when using flight inspection receiver
[FAA-NA-72-18]

N72-18649

Evaluation of thrust magnitude control for bomber defense missiles
[AD-731812]

N72-18788

Applying systems analysis techniques to aircraft maintenance to achieve aviation safety

N72-19017

SYSTEMS ENGINEERING

Optimal control synthesis for linear passive stationary plants with symmetrical coefficient matrices of minimized functional

A72-23431

System methodology application to filter design for inertial reference unit calibration in digital test station for FB-111 aircraft navigation system

A72-23820

Avionics systems electrical interface connection design information document creation and dissemination, using EMPRENT computer program

A72-24864

RCA SECANT aircraft collision avoidance system avionics design using nonsynchronous techniques

A72-24866

Water-glycol convective cooling system for Mach 6 hypersonic transport airframe
[NASA-CR-1918]

N72-18011

Effectiveness evaluation of automatic spin prevention system for fighter aircraft

[NASA-TN-D-6670] N72-18012

Feasibility analysis of variable speed constant frequency inverter system using dc link approach for aircraft use

[AD-734067] N72-19065

Management planning and operation of test facilities for effective application to development of systems and equipment for aerospace vehicles

[AD-731548] N72-19307

Application of fluidic pneumatic elements and systems for control of aircraft, missiles, and spacecraft

[AD-734715] N72-19343

SYSTEMS STABILITY

Pod-mounted jet engine follower force instability, analyzing two degrees of freedom system dynamics

A72-22938

Liapunov functional stability analysis in structural dynamics problems including wave equations with nonlinear damping

A72-23457

T

T TAIL SURFACES

Development of technique for measuring steady state lift loads on aircraft with T-tail configuration and determination of flutter speed
[RAE-TR-71035]

N72-17991

T-38 AIRCRAFT

Effect of high temperature hydraulic fluid on operation of control surface servovalves installed on T-38 aircraft
[AD-734259]

N72-19042

TACAN

Procedures for collecting distance measuring equipment traffic loading data for TACAN ground stations
[FAA-NA-72-24]

N72-18653

TAIL ASSEMBLIES

Pressure measurements on harmonically oscillating wing-tail configurations in incompressible speed range

[DLR-FB-71-54] N72-19024

TAKEOFF

Evaluation of takeoff and landing performance of commercial STOL airplanes
[NASA-TT-F-14166]

N72-19023

TAKEOFF RUNS

Buccaneer Mk 2 and F-4K Phantom takeoff and landing performance improvement due to boundary layer control by leading and trailing edge blowing

A72-22973

TARGET ACQUISITION

Stochastic optimization of airborne laser seeker system design parameters to maximize target acquisition probability through regression analysis of data from computerized model

A72-24682

TAXIING

Anthropotechnical aspects of aircraft taxiing guidance in airfield runway areas, suggesting computerized operational system

A72-22779

Deterministic optimization of aircraft undercarriage suspension characteristics for taxiing induced vibration minimization, discussing damping and stiffness functions and hybrid computer solution

A72-23458

ICAO standardized taxiing guidance and airports surface traffic control procedures

A72-24171

TECHNOLOGICAL FORECASTING

Technology forecasting and risk assessment in V/STOL transport area, examining mission issues and selection criteria

A72-22473

TECHNOLOGIES

Scientific and technological research projects

N72-18242

TECHNOLOGY ASSESSMENT

Survey and analysis of application of nondestructive inspection methods to aircraft structures
[AGARD-R-587-71]

N72-19541

TECHNOLOGY UTILIZATION

Microwave equipment and technology application for instrument landing, terminal ATC, millimeter wave

- CAT detection and satellite communications
A72-24036
- TELEVISION EQUIPMENT**
Design and development of six-degree-of-freedom visual approach and landing simulator for training F-105 pilots
[AD-733240] N72-18267
- TELLURIUM ALLOYS**
Cd-Te photodetectors for high temperature infrared detectors of aircraft engine fires
[AD-734785] N72-19536
- TEMPERATURE EFFECTS**
Effect of high temperature hydraulic fluid on operation of control surface servovalves installed on T-38 aircraft
[AD-734259] N72-19042
- TEMPERATURE GRADIENTS**
Horizontal temperature variations relation to stratospheric CAT based on U-2 flight data
A72-22438
- TERMINAL FACILITIES**
British regional airports development, discussing terminal facilities for scheduled and nonscheduled air carriers on domestic and international routes
A72-24170
Low powered distance measuring equipment for terminal facilities
[FAA-NA-72-25] N72-18650
Computer simulation to determine capacity of air terminal for short takeoff and landing intra-urban air rapid transit system
[AD-733185] N72-18660
Numerical analysis of flight planning and air traffic control procedures for civil aviation
[AD-734881] N72-19728
- TERRAIN ANALYSIS**
Sensors for data acquisition systems for earth observations by spacecraft or aircraft
[NASA-TM-X-62107] N72-18199
- TEST EQUIPMENT**
Hydraulic tank application to internal flow visualization in turbomachinery, describing test equipment and methods used for axial flow model
A72-24654
Implementation of instrumentation techniques for service testing of aircraft and airborne equipment to meet military requirements
[AD-734306] N72-19300
- TEST FACILITIES**
Development of methods for conducting climatic tests with emphasis on design, construction, and operation of climatic hangar
[AD-733299] N72-18268
Turbojet engine test facility with digital system for advanced control and performance studies
[AD-733353] N72-18469
Development of magnetic artificial gravity test facility for use in wind tunnel tests to simulate separation of external stores from aircraft in flight
[NASA-CR-1955] N72-19000
Slush drag, wheel spray, and hydroplaning research using pneumatic wheels and moving runway and water layer model test facilities
[ARC-R/M-3682] N72-19035
History of aircraft crash injury studies and facilities for simulation
N72-19150
Management planning and operation of test facilities for effective application to development of systems and equipment for aerospace vehicles
[AD-731548] N72-19307
- TETHERED BALLOONS**
Stability and damping characteristics of tethered balloon systems, using computer programs for IBM 360
[AD-731570] N72-18044
- THERMAL EMISSION**
High resolution observation of stratospheric submillimeter thermal emission spectrum by helium-cooled InSb electron bolometer on board Comet 2E aircraft
A72-25023
- THERMAL POLLUTION**
Heat transfer research review, discussing gas turbines, aeronautics, astronautics, nuclear power, thermal pollution and controlled fusion challenges
A72-23684
- Environment pollution of turbine engine aircraft
N72-19030
- THERMAL PROTECTION**
Thin wall airframe wire insulation relative thermal life and temperature rating evaluation procedure using Arrhenius plot
A72-23270
- THERMAL STABILITY**
Thermally stable laminating resins based on addition-type pyrolytic polymerization
[NASA-CR-72984] N72-18584
- THERMODYNAMIC PROPERTIES**
Thermodynamic and chemical properties of JP-4 jet fuel for 1970
[AD-733352] N72-18764
- THIN AIRFOILS**
General solution for thin airfoil rectilinear motion in ideal incompressible gas, applying to rotor blade lift calculation
A72-22860
Integrodifferential equation for rigid tunnel walls effect on supercavitating flow past thin jet flapped airfoil, noting lift coefficient derivatives
A72-24562
- THIN PLATES**
Evaluation of steady-state and nonsteady-state methods for measuring panel damping with emphasis on use of random process techniques and digital data reduction methods
[NASA-CR-114423] N72-18909
- THIN WALLS**
Estimating aeroelastic stability and forced response characteristics of thin walled, circular cylindrical shells
[AD-733370] N72-17996
- THIN WINGS**
Supersonic flow around thin cruciform wing with antisymmetrical angle of attack distribution and horizontal plane with leading edge, considering flow separation at edges
A72-25118
- THREE DIMENSIONAL BOUNDARY LAYER**
Equations of motion of steady viscous fluid flow in three dimensional boundary layer on walls of axial flow compressors and turbines, obtaining velocity field
A72-25120
Mixing length flow model for two- and three-dimensional turbulent boundary layers in compressible and incompressible flows using similarity equations
N72-19327
- THREE DIMENSIONAL FLOW**
Two and three dimensional turbulent boundary layers integral calculation method, presenting similarity solutions based on extended mixing length model
A72-24653
Computerized design of axial compressor stage using radial three dimensional equilibrium flow equations
[AD-733437] N72-18507
- THROTTLING**
Aerodynamic throttling effect due to air jet flow interaction in throat region of mainstream two dimensional nozzle flow
A72-24845
- THRUST CONTROL**
Evaluation of thrust magnitude control for bomber defense missiles
[AD-731812] N72-18788
- TILT WING AIRCRAFT**
Wind tunnel tests to determine longitudinal control capability of four propeller, tilt wing aerodynamic configuration with cyclic pitch propellers
[AD-734236] N72-19040
Wind tunnel tests to determine effectiveness of cyclic pitch propellers as low speed longitudinal control system for V/STOL tilt wing transport-type aircraft
[AD-734068] N72-19047
- TIME DEPENDENCE**
Two spool gas turbine engine characteristics with speed reduction, determining time dependence of turbocompressor rpm, gas temperature and engine power
A72-23185

TIME DIVISION MULTIPLEXING

Evaluation of technological risk areas of
time/frequency air traffic control system
[AD-733761] N72-18668

TIP SPEED

Analytical correlation of centrifugal compressor
design geometry for maximum efficiency with
specific speed
[NASA-TN-D-6729] N72-19002

TITANIUM ALLOYS

Titanium-boron-epoxy composite materials selection
and fracture mechanics criteria for B-1 bomber
structural design
A72-22477

Environmental tests to determine behavior of
titanium alloys under hot salt, stress corrosion
conditions existing in jet engines
[NASA-TN-X-68015] N72-18541

TRAILING EDGES

Base pressure drag reduction on rectangular wings
with blunt trailing edges from low speed wind
tunnel measurements
A72-24842

Slender body theory for flow calculation past low
aspect ratio delta wing with straight trailing
edge, noting lifting vortices distribution
A72-25131

TRAILING-EDGE FLAPS

Noise data obtained with small scale model of
externally blown flap of type being considered for
STOL aircraft
[NASA-TN-D-6636] N72-19025

TRAINING AIRCRAFT

Mitsubishi XT-2 jet trainer aircraft, presenting
design, structural and performance data
A72-25107

TRAJECTORY OPTIMIZATION

Computerized simulation used to obtain time optimal
trajectories for P-3C ASW aircraft
[AD-734167] N72-19046

TRANSIENT RESPONSE

Transient characteristics and steady state
off-design operation of mixed and unmixed type
turbofan engines, noting peculiarities in control
characteristics
A72-22626

TRANSMITTERS

Radiation patterns and transmitter power needed for
two-bay antenna used with VOR approach marker
beacon
[FAA-RD-72-33] N72-18659

TRANSONIC COMPRESSORS

Design and experimental performance of 20-inch
diameter, tandem bladed, axial flow, transonic
compressor rotor for advanced air breathing
engines
[NASA-TN-X-2484] N72-18773
Comparison of flow characteristics of two transonic
compressors
N72-19852

TRANSONIC WIND TUNNELS

Transonic and blowdown-wind tunnels for high
Reynolds number testing
[AD-734648] N72-19306

TRANSPORT AIRCRAFT

Technology forecasting and risk assessment in V/STOL
transport area, examining mission issues and
selection criteria
A72-22473

Aerodynamic efficiency of plane slotted blade
cascades of adjustable nozzle diaphragms in
transport aircraft axial flow gas turbine engines
A72-23186

STOL and V/STOL transport aircraft design
requirements consideration based on common
propulsion and lift engine types use, noting fan
lift solution superiority
A72-24865

Flight test investigation of effect of wing tip
vortices generated by large jet transport aircraft
when intersected by smaller general aviation type
aircraft
[NASA-TN-D-6655] N72-18003

Water-glycol convective cooling system for Mach 6
hypersonic transport airframe
[NASA-CR-1918] N72-18011

Analysis of short haul aircraft transportation
system for San Francisco Bay area, California
[NASA-CR-2006] N72-19021

Technique for predicting etiology of decompression
sickness in unpressurized aircraft above 20,000
feet
[AD-731118] N72-19106

Detail design of turbotip lift fan for use with
YJ97-GE-100 turbojet gas generator to V/STOL
transport research aircraft
[NASA-CR-120787] N72-19842

TUNNELS

Integrodifferential equation for rigid tunnel walls
effect on supercavitating flow past thin jet
flapped airfoil, noting lift coefficient
derivatives
A72-24562

TURBINE BLADES

Ceramic fiber reinforced Ni base alloy for gas
turbine blades, improving creep resistance at high
temperatures
A72-22396

Aerodynamic efficiency of plane slotted blade
cascades of adjustable nozzle diaphragms in
transport aircraft axial flow gas turbine engines
A72-23186

Turbine engine aerodynamics research on higher inlet
temperature and blade loading
[NASA-TN-X-68016] N72-18782

Fabrication of high strength-high temperature
superalloys for turbine blades
[AD-734304] N72-19647

TURBINE ENGINES

Accelerated full scale aircraft turbine engine
corrosion tests in controlled environment,
simulating salt, high temperature and humidity
conditions
[NACE PAPER 76] A72-24320
Aircraft scheduled maintenance, discussing turbine
engine and component reliability protection,
controlled overhaul, test and repair
A72-24867

Characteristics of jets flowing from air entry holes
of combustion chamber of gas turbine for jet flow
parallel to and normal to primary flow through
turbine
[NAL-TR-227] N72-18279

Turbine engine aerodynamics research on higher inlet
temperature and blade loading
[NASA-TN-X-68016] N72-18782

TURBINE INSTRUMENTS

Capacitive electret pressure sensors calibration for
interior measurements in turbine engines, jets and
exhaust nozzles
[ONERA, TP NO. 982] A72-22815

TURBINES

Performance tests of single-stage turbine with low
solidity jet flap rotor blade assembly using
various cavity pressure ratios, equivalent speeds,
and expansion ratios
[NASA-CR-1968] N72-18994

TURBOCOMPRESSORS

Partial load computation for axial flow compressor
stages, describing computer method limitations
A72-22632

Secondary losses reduction procedure in axial flow
turbine stages, using boundary layer fences on
blades profile suction side
A72-22634

Two spool gas turbine engine characteristics with
speed reduction, determining time dependence of
turbocompressor rpm, gas temperature and engine
power
A72-23185

Equations of motion of steady viscous fluid flow in
three dimensional boundary layer on walls of axial
flow compressors and turbines, obtaining velocity
field
A72-25120

Computerized design of axial compressor stage using
radial three dimensional equilibrium flow
equations
[AD-733437] N72-18507

Aerodynamic design and performance of axial flow
compressor rotor with tip speed of 1380 feet per
second and 1.1 blade tip solidity
[NASA-TN-X-2449] N72-18998

Experimental study of effect of blade aspect ratio
on performance of axial flow compressors
[ARC-CP-1179] N72-19331

Acoustic measurements of aerodynamic noise in low
supersonic operation of axial flow compressor

SUBJECT INDEX

UNSTEADY FLOW

[NASA-CR-125811] N72-19849
 Fuel flow control by sensing airflow conditions at
 discharge of engine compressor
 [AD-734542] N72-19857

TURBOFAN ENGINES
 Transient characteristics and steady state
 off-design operation of mixed and unmixed type
 turbofan engines, noting peculiarities in control
 characteristics A72-22626
 Computer program for steady state turbojet and
 turbofan engine cycle calculations N72-18783
 [NASA-TN-D-6552]
 Nacelle cowling of high bypass ratio turbofan
 engines N72-18789
 [AD-733738]

TURBOPANS
 Variable pitch fans for STOL aircraft thrust/shaft
 engine, noting short field capability and
 quietness A72-23447
 Detail design of turbotip lift fan for use with
 YJ97-GE-100 turbojet gas generator to V/STOL
 transport research aircraft N72-19842
 [NASA-CR-120787]
 Acoustic tests of fans used with fan jet engine and
 measurement of far field noise for several
 configurations N72-19845
 [NASA-TN-X-2528]

TURBOJET ENGINES
 Runway fog dispersal system based on underground
 installed flight-discarded turbojet engines,
 discussing system efficiency and economics A72-22910
 Turbojet engine test facility with digital system
 for advanced control and performance studies
 [AD-733353] N72-18469
 Computer program for steady state turbojet and
 turbofan engine cycle calculations N72-18783
 [NASA-TN-D-6552]
 Influence of reflections on acoustic pressure
 spectra of turbojets N72-19737
 [NASA-TT-F-14185]
 Contactless measurement of tip clearance in jet
 engine turbine based on radioactive isotope
 properties N72-19856
 [AD-734912]
 Fuel flow control by sensing airflow conditions at
 discharge of engine compressor N72-19857
 [AD-734542]

TURBOMACHINERY
 Centrifugal turboengine diffuser with high
 enlargement area compared with logarithmic spiral
 types, discussing boundary layers, secondary flow,
 shapes and aerodynamic parameters A72-23747
 Hydraulic tank application to internal flow
 visualization in turbomachinery, describing test
 equipment and methods used for axial flow model
 A72-24654
 Conference on flow characteristics of turbomachinery
 [AD-735021] N72-19858

TURBULENCE EFFECTS
 Nonlinear longitudinal aerodynamic characteristics
 effect on rigid aircraft response to normal
 acceleration due to atmospheric turbulence, using
 power spectral technique A72-23461
 Conical diffuser response to velocity distribution
 and turbulence intensity at inlet A72-23858

TURBULENT BOUNDARY LAYER
 Pressure recovery calculation for subsonic adiabatic
 air flow through diffusers with tail pipes,
 assuming turbulent inlet boundary layer A72-23855
 Turbulent boundary layer growth measurement on
 annular diffuser containing free vortex swirl
 A72-23857
 Rotational, centrifugal and Coriolis force effects
 on turbulent boundary layer development,
 discussing changes in structure and shear stress
 distribution A72-23870
 Two and three dimensional turbulent boundary layers
 integral calculation method, presenting similarity
 solutions based on extended mixing length model
 A72-24653

Mixing length flow model for two- and
 three-dimensional turbulent boundary layers in
 compressible and incompressible flows using
 similarity equations N72-19327

TURBULENT FLOW
 Turbulent shear stress and kinetic energy
 characteristics of subsonic air flow in straight
 conical diffuser, using hot-wire anemometry
 measurements A72-23862

TURBULENT JETS
 IR measurement of hot jets turbulence intensity
 axial and transverse profiles, noting application
 to sound sources detection A72-24656

TURBULENT WAKES
 Dynamic pressure distribution and propulsive
 contours of trailing vortex wake downwind of
 external flow jet flap, using five-hole probe
 measurements A72-25070
 Hydrodynamic forces in sinusoidal vibrations of disk
 in water channel with toroidal vorticity wake
 pattern, applying results to flapping wing
 mechanics A72-25129
 Flight test investigation of effect of wing tip
 vortices generated by large jet transport aircraft
 when intersected by smaller general aviation type
 aircraft N72-18003
 [NASA-TN-D-6655]

TWISTED WINGS
 Wing load distribution and induced drag control by
 warping, summarizing linear theory and wind tunnel
 test results A72-24218

TWO DIMENSIONAL FLOW
 Two and three dimensional turbulent boundary layers
 integral calculation method, presenting similarity
 solutions based on extended mixing length model
 A72-24653
 Aerodynamic throttling effect due to air jet flow
 interaction in throat region of mainstream two
 dimensional nozzle flow A72-24845
 Plane laminar semibounded incompressible fluid jet
 propagation into slipstream along moving plate,
 solving boundary layer equations A72-25136
 Derivation of cross-spectral functions for vertical
 and longitudinal components of two dimensional
 gust field N72-19029
 [NASA-CR-2011]

U

U.S.S.R.
 Historical review and present status analysis of
 civilian aviation in USSR N72-19044
 [AD-734069]

UH-1 HELICOPTER
 Flight test of three-axis fluidic stability
 augmentation system for UH-1 helicopter
 [AD-734343] N72-19043

ULTRAHIGH FREQUENCIES
 Development of ultrahigh frequency glide path system
 [AD-733694] N72-19726

UNDERCARRIAGES
 Deterministic optimization of aircraft undercarriage
 suspension characteristics for taxiing induced
 vibration minimization, discussing damping and
 stiffness functions and hybrid computer solution
 A72-23458

UNIDENTIFIED FLYING OBJECTS
 UFO sighting case history and analysis, discussing
 bright light approaching on collision course
 during night instrument flight rules A72-22646

UNITS OF MEASUREMENT
 Dimensional analysis in aeronautical engineering
 including fixed and natural units N72-19671
 [AD-735128]

UNSTEADY FLOW
 Subsonic unsteady aerodynamic pressures on blades of
 compressor wheel rotating freely in air stream
 A72-24854
 Visualization of unsteady flow around oscillating
 airfoils and rotary wings, and within

- turbomachines in hydraulic tunnels
[ONERA-NT-180] N72-19329
- UTILITY AIRCRAFT**
- Marchetti SV-20-A twin engine winged
commercial/utility helicopter, describing design
details, onboard systems and payload
accommodations A72-22907
- Fixed wing agricultural aircraft, comparing
different designs in terms of performance, safety,
handling and economic efficiency A72-22940

V

V/STOL AIRCRAFT

- Technology forecasting and risk assessment in V/STOL
transport area, examining mission issues and
selection criteria A72-22473
- Anthropotechnical aspects of V/STOL aircraft
control, discussing instrument and control systems
concepts based on development and flight tests of
experimental Do-31 VTOL aircraft A72-22784
- STOL and V/STOL transport aircraft design
requirements consideration based on common
propulsion and lift engine types use, noting fan
lift solution superiority A72-24865
- Wind tunnel aerodynamic characteristics of V/STOL
transport model with outboard pod mounted front
fans and rear fans located in wing-fuselage
junction [NASA-TM-X-62102] N72-17987
- Wind tunnel tests to determine effects of ground
proximity on aerodynamic characteristics of V/STOL
aircraft model [NASA-TM-X-2212] N72-18008
- Wind tunnel tests to determine effectiveness of
cyclic pitch control on V/STOL aircraft for
longitudinal control during hover and transition
[AD-734237] N72-19039
- Wind tunnel tests to determine effectiveness of
cyclic pitch propellers as low speed longitudinal
control system for V/STOL tilt wing transport-type
aircraft [AD-734068] N72-19047
- Detail design of turboprop lift fan for use with
YJ97-GE-100 turbojet gas generator for V/STOL
transport research aircraft [NASA-CR-120787] N72-19842
- VANELESS DIFFUSERS**
- Compressible flow measurement and loss prediction in
radial vaneless diffuser in centrifugal
compressor, using hot-wire anemometers A72-23861
- VANES**
- Wide angle conical diffuser performance improvement
by conical splitter vanes, considering static
pressure recovery A72-23860
- VARIABLE PITCH PROPELLERS**
- Variable pitch fans for STOL aircraft thrust/shaft
engine, noting short field capability and
quietness A72-23447
- VELOCITY DISTRIBUTION**
- Radial velocity distribution at supersonic
compressor inlet from duct-cowl and wall pressure
measurements [ONERA, TP NO. 975] A72-22812
- Conical diffuser response to velocity distribution
and turbulence intensity at inlet A72-23858
- Equations of motion of steady viscous fluid flow in
three dimensional boundary layer on walls of axial
flow compressors and turbines, obtaining velocity
field A72-25120
- Effects of radial and circumferential inlet velocity
profile distortions on performance of short-length
double-annular ram-induction combustor
[NASA-TN-D-6706] N72-19841
- VELOCITY MEASUREMENT**
- Flight vehicle angular velocity measurement by
accelerometers, deriving equations of motion A72-24497
- FORTRAN program for calculating velocities in
meridional plane of centrifugal compressor
[NASA-TN-D-6701] N72-17988
- VERTICAL TAKEOFF AIRCRAFT**
- Wind tunnel tests to determine aerodynamic
characteristics of vertical takeoff jet fighter
aircraft with six jet engines in transition speed
range [NASA-TM-X-2060] N72-18007
- Model of completed successful missions of V/STOL
versus CTOL aircraft systems [AD-732681] N72-18031
- Requirements for airborne rescue system in military
search and rescue missions [AD-733987] N72-18047
- Fan and wing force data on wind tunnel model of VTOL
lift fan in two dimensional wing, with and without
exit louvers [NASA-TN-D-6654] N72-18775
- Simulation of wind, system data rate, and
contingency event variables during steep descent
of vertical lift aircraft under instrument
conditions to determine pilot performance
[AD-734702] N72-19051
- VERTIGO**
- Analysis of aircraft accidents resulting from pilot
disorientation and vertigo during flights on
military aircraft and helicopters [AD-735119] N72-19053
- VERY HIGH FREQUENCY RADIO EQUIPMENT**
- Very high frequency radio beacon system for location
marking in jungle [AD-733916] N72-19725
- VHF OMNIRANGE NAVIGATION**
- Airborne VHF omnirange /VOR/ systems minimum
operational standards for navigation and
communication in air traffic control A72-24725
- Analysis of incompatibility between ground and
airborne measurements of VOR space modulation when
using flight inspection receiver [FAA-NA-72-18] N72-18649
- Flight tests of VHF omnirange navigation system to
determine maximum fix distances for safe
approaches and equipment required for safe weather
operations [FAA-FS-600-4] N72-18651
- Radiation patterns and transmitter power needed for
two-way antenna used with VOR approach marker
beacon [FAA-RD-72-33] N72-18659
- VIBRATION DAMPING**
- Correlation functions for angular vibrations of
operating aerial camera during working cycle A72-22947
- Deterministic optimization of aircraft undercarriage
suspension characteristics for taxing induced
vibration minimization, discussing damping and
stiffness functions and hybrid computer solution A72-23458
- Random vibration of linearly elastic lumped mass
systems containing nonlinear damping to ideal
stationary Gaussian white noise excitation A72-23460
- Evaluation of steady-state and nonsteady-state
methods for measuring panel damping with emphasis
on use of random process techniques and digital
data reduction methods [NASA-CR-114423] N72-18909
- VIBRATION TESTS**
- Bending response of rotary wing blades when
subjected to random input velocities for both
hinged and unhinged cases of root end fixity
[AD-732395] N72-18028
- VISCOUS FLUIDS**
- Equations of motion of steady viscous fluid flow in
three dimensional boundary layer on walls of axial
flow compressors and turbines, obtaining velocity
field A72-25120
- VISIBILITY**
- Evaluation of bisphenol polyether, styrene acrylate,
and chlorinated rubber alkyd as coatings for
airfield runway marking [AD-734320] N72-19644
- VISORS**
- Glass-vinyl retractable windshield visor development
for Concorde aircraft, considering rain, hail and
icing effects, strength and stiffness under

SUBJECT INDEX

WELDED JOINTS

aerodynamic loading and heating A72-22900

VISUAL FLIGHT RULES
Aircraft collision near misses under IFR and VFR conditions, discussing ATC coordination, equipment failure and personal and planning problems A72-22972

VOICE COMMUNICATION
Improving intelligibility of voice communication in high acoustic noise environments as exists inside helicopters [AD-733431] N72-18171

VORTEX BREAKDOWN
Vortex breakdown studied by flow visualization noting pressure gradient effect and analogy with boundary layer separation and wake bursting [ONERA-NT-175] N72-19328

VORTEX RINGS
Application of ring vortex method for determining aerodynamic characteristics of rotary wings and design of lifting rotor systems [AD-735018] N72-19013

VORTEX SHEETS
Dynamic pressure distribution and propulsive contours of trailing vortex wake downwind of external flow jet flap, using five-hole probe measurements A72-25070

Lifting potential flow in terms of doublet distribution over body surface and trailing vortex sheet [NAL-TR-243] N72-18281

VORTICES
Turbulent boundary layer growth measurement on annular diffuser containing free vortex swirl A72-23857

Aerodynamic forces calculation for constant vortex shear flows around airfoil fixed between rectilinear walls, noting resultant perpendicularity to OX axis A72-24115

Flight test investigation of effect of wing tip vortices generated by large jet transport aircraft when intersected by smaller general aviation type aircraft [NASA-TN-D-6655] N72-18003

Radial vane array for controlling wing tip vortices [ATN-7102] N72-18026

Vortex shredding noise characteristics of isolated airfoils in Reynolds number range applicable to full scale helicopter rotors [AD-734433] N72-19048

Linearized solution for flow separation near tip and wake edge of lifting wing with trailing edge separation [AD-734791] N72-19347

W

WAKES
Catalog of devices and techniques for boundary layer and wake measurements on flight vehicles [NASA-CR-116776] N72-18424

WALL FLOW
Integrodifferential equation for rigid tunnel walls effect on supercavitating flow past thin jet flapped airfoil, noting lift coefficient derivatives A72-24562

WALL PRESSURE
Supersonic and subsonic jet flows coexistence in constant section duct, analyzing pressure on walls and in fluid and schlieren visualization [ONERA, TP NO. 976] A72-22813

WARNING SYSTEMS
Automation in planning and execution of flights, considering navigation, communication, flight instruments monitoring, control/stabilization and warning systems A72-22780

Collision avoidance systems requirements and criteria, evaluating Eros time frequency and Secant interrogation-and-reply systems A72-22822

C-band pulse beacon ranging system for collision avoidance, detailing interrogation, response and system test modes A72-22908

WARPAGE
Wing load distribution and induced drag control by warping, summarizing linear theory and wind tunnel test results A72-24218

WASTE DISPOSAL
Reliability design for airborne ecological system for jumbo jets, discussing toilet flushing and multiple server queueing model A72-23999

WATER
Chromate rinse for aircraft exposed to corrosive salt water environments [AD-732762] N72-18503

WATER POLLUTION
Fraunhofer line discriminator as remote sensor of fluorescent dyes used in pollution detection [NASA-CR-125643] N72-18448

WAVE EXCITATION
Sonic boom effects on structures, discussing ground motion, direct excitation by shock waves and damages A72-23318

WAVE GENERATION
Sonic booms generation and propagation, discussing effects on animate and inanimate objects A72-23316

WAVE REFLECTION
Calculation of shock wave reflection in supersonic inlets using method of characteristics including Mach disc problem [ONERA-NT-183] N72-19005

WAVE SCATTERING
Spatial Fourier transform for wave scattering from rough surfaces [AD-734044] N72-19576

WEATHER
Aircraft accident report of Aero Commander aircraft at Aspen, Colorado on January 22, 1970 [NTSR-AAR-72-1] N72-18029

WEATHER FORECASTING
Real time pilot reports via digital ground-air-ground data link, discussing encoding and processing equipment, meteorological codes and automatic real time weather forecasts A72-25079

Military weather forecasting requirements by 1980, discussing decision making, data processing, satellite data, mission and terminal forecasts, display and computer flight planning A72-25096

Terminal forecast reference file for Columbus AFB, Miss. [AD-734807] N72-19713

Terminal forecast reference file for McClellan Air Force Base [AD-734800] N72-19714

WEATHER MODIFICATION
Warm fog modification by seeding with hygroscopic materials [AD-733671] N72-18636

WEIGHT ANALYSIS
Wing structural weight estimation for civil aircraft preliminary deriving generalized formula based on wing root bending moment for specified flight condition A72-22909

Weight estimation and analysis of major structural components of hypersonic, liquid hydrogen fueled aircraft [NASA-TN-D-6692] N72-18911

Feasibility of direct current 200 V commercial aircraft electrical power system noting weight comparison with alternating current system [ARC-CP-1186] N72-19062

WEIGHT INDICATORS
Superconducting magnetic suspension and balance facility of supersonic wind tunnel for dynamic stability studies A72-24757

Superconducting coil design for magnetic suspension of supersonic wind tunnel balance A72-24759

Aerodynamic force and moment measurements on model in magnetic wind tunnel balance system, using field equations A72-24765

WELDED JOINTS
Nondestructive tests and their application for

- inspection of adhesive bonded structures, welded joints, and riveted or bolted joints N72-19542
- WELDED STRUCTURES**
Statistical evaluation of welded airframe component fatigue damage increment during cyclic loading with constant force amplitude A72-24922
- WHEELS**
Slush drag, wheel spray, and hydroplaning research using pneumatic wheels and moving runway and water layer model test facilities [ARC-R/M-3682] N72-19035
- WHITE NOISE**
Random vibration of linearly elastic lumped mass systems containing, nonlinear damping to ideal stationary Gaussian white noise excitation A72-23460
- WIND PRESSURE**
Effects of Q forces on injuries during ejection/extraction escape in USAF N72-19144
Performance tests of protective clothing to determine effectiveness against air blast during high speed ejection N72-19147
- WIND TUNNEL APPARATUS**
German monograph on shaft and wall effect in aerodynamic measurements with three orifice pressure probes in wind tunnels A72-22320
Wind tunnel diffuser design for separated region spread reduction based on egg box principle A72-23859
Superconducting magnetic suspension and balance facility of supersonic wind tunnel for dynamic stability studies A72-24757
Superconducting coil design for magnetic suspension of supersonic wind tunnel balance A72-24759
Aerodynamic force and moment measurements on model in magnetic wind tunnel balance system, using field equations A72-24765
Development of magnetic artificial gravity test facility for use in wind tunnel tests to simulate separation of external stores from aircraft in flight [NASA-CR-1955] N72-19000
- WIND TUNNEL MODELS**
Wind tunnel investigation of Reynolds number effects on boundary layer separation incidence and maximum lift coefficient of high-lift device equipped aircraft model A72-24657
Aerodynamic force and moment measurements on model in magnetic wind tunnel balance system, using field equations A72-24765
Data acquisition and reduction for model aerodynamics in superconducting magnetic suspension and balance of supersonic wind tunnel facility A72-24766
Static aerodynamic characteristics of bulbous based cone models and slender wings at subsonic speed, using magnetic suspension and balance system A72-24769
Aerodynamic data acquisition with magnetic balance on wind tunnel model delta and AGARD G wing planforms and body of revolution A72-24770
Magnetic simulation of gravity for wind tunnel investigations of aircraft jettison processes, considering Proude number and relationships between model and full scale aircraft A72-24775
Iron rotational hysteresis effect in cold magnetic balance wind tunnel system for spinning aircraft configurations and subsonic flow regimes A72-24776
Wind tunnel aerodynamic characteristics of V/STOL transport model with outboard pod mounted front fans and rear fans located in wing-fuselage junction [NASA-TM-X-62102] N72-17987
Wind tunnel tests of models of helicopter rotary wings to determine blade element airloads in unstalled and stalled flight regimes [NASA-CR-114424] N72-18005
Wind tunnel tests to determine aerodynamic characteristics of vertical takeoff jet fighter aircraft with six jet engines in transition speed range [NASA-TM-X-2060] N72-18007
Wind tunnel tests to determine effects of ground proximity on aerodynamic characteristics of V/STOL aircraft model [NASA-TM-X-2212] N72-18008
Wind tunnel tests to determine dynamic characteristics of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 1 [NASA-CR-114427] N72-18024
Compilation of data obtained from wind tunnel tests of hingeless rotors with hub moment feedback controls and rotor frequency response - Vol. 2 [NASA-CR-114428] N72-18025
Wind tunnel study of aerodynamic drag for engine pod and its elements including air intake and afterbody [NASA-TT-P-14154] N72-18997
Wind tunnel tests to determine effectiveness of cyclic pitch control on V/STOL aircraft for longitudinal control during hover and transition [AD-734237] N72-19039
Wind tunnel tests to determine longitudinal control capability of four propeller, tilt wing aerodynamic configuration with cyclic pitch propellers [AD-734236] N72-19040
- WIND TUNNEL NOZZLES**
Single screw variable nozzle for varying Mach number in supersonic wind tunnels [RR-018] N72-18256
- WIND TUNNEL STABILITY TESTS**
Wind tunnel tests to determine static stability and control characteristics of flexible aircraft [NASA-TN-D-6656] N72-19001
Low speed wind tunnel test on low-drag airfoil at half a million Reynolds number, noting aerodynamic coefficients [ARC-CP-1187] N72-19033
- WIND TUNNELS**
Electromagnetic position sensor for magnetically supported model in wind tunnel, discussing design, operation principles and performance A72-24773
Wind tunnel investigation of shock impingement caused by boundary layer separation ahead of blunt fins [RM-536] N72-18285
- WIND VANES**
Effect of limited amplitude and rate of flap motion on vane controlled gust alleviation system [NASA-TN-D-6733] N72-18995
- WINDSHIELDS**
Glass-vinyl retractable windshield visor development for Concorde aircraft, considering rain, hail and icing effects, strength and stiffness under aerodynamic loading and heating A72-22900
- WING CAMBER**
Airfoil contour design as envelope of family of circles with centers lying on mean camber line A72-22298
- WING FLAPS**
Effect of limited amplitude and rate of flap motion on vane controlled gust alleviation system [NASA-TN-D-6733] N72-18995
- WING LOADING**
Wing load distribution and induced drag control by warping, summarizing linear theory and wind tunnel test results A72-24218
- WING OSCILLATIONS**
Approximate method for nonlinear differential equations of motion solution in flight dynamics, applying to control surface buzz and slender wing oscillations A72-23453
Hydrodynamic forces in sinusoidal vibrations of disk in water channel with toroidal vorticity wake pattern, applying results to flapping wing mechanics A72-25129

SUBJECT INDEX

YAWING MOMENTS

WING PLANFORMS

Aerodynamic data acquisition with magnetic balance on wind tunnel model delta and AGARD G wing planforms and body of revolution

A72-24770

Lift increase of small span-chord ratio wings with lateral fluid jets directed along span [AD-733858]

N72-19010

Laboratory simulation of Mach 3 cruise heating on wing structure representative of X-15 aircraft for flight loads measurement

[NASA-TN-D-6749]

N72-19922

WING PROFILES

Laminar/turbulent boundary layer transition on parabolic wing profile in supersonic wind tunnel, noting critical Reynolds number increase with leading edge thickness

A72-22407

WING TIPS

Radial vane array for controlling wing tip vortices [ATN-7102]

N72-18026

Linearized solution for flow separation near tip and wake edge of lifting wing with trailing edge separation

[AD-734791]

N72-19347

WING-FUSELAGE STORES

Wind tunnel aerodynamic characteristics of V/STOL transport model with outboard pod mounted front fans and rear fans located in wing-fuselage junction

[NASA-TN-X-62102]

N72-17987

WINGED VEHICLES

Ground effect wing vehicles stability in forward motion, deriving characteristic equations by linear analysis

A72-24844

WINGS

Wing structural weight estimation for civil aircraft preliminary deriving generalized formula based on wing root bending moment for specified flight condition

A72-22909

WIRE

Fatigue testing of mechanical cables for arresting gears

[AD-733988]

N72-18273

WORK CAPACITY

Ground based ATC information processing systems analysis, considering controllers work load

A72-22778

X

X-15 AIRCRAFT

Laboratory simulation of Mach 3 cruise heating on wing structure representative of X-15 aircraft for flight loads measurement

[NASA-TN-D-6749]

N72-19922

Y

YAWING MOMENTS

Hovercraft internal and external aerodynamic forces, discussing control, suspension, yawing moments, directional and roll stability and random surfaces performances

A72-22824

PERSONAL AUTHOR INDEX

AERONAUTICAL ENGINEERING / *A Special Bibliography (Suppl 19)*

JUNE 1972

Typical Personal Author Index Listing

Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g. NASA report translation, NASA contractor report). The accession number is located beneath and to the right of the title, e.g. N72 10044. Under any one author's name the accession numbers are arranged in sequence with the IAA accession numbers appearing first.

A

- ABDEL-KAWI, S.**
Aerodynamic data acquisition with the University of Southampton magnetic balance.
A72-24770
- ABEL, I.**
A wind-tunnel evaluation of analytical techniques for predicting static stability and control characteristics of flexible aircraft
[NASA-TN-D-6656]
N72-19001
- ABELSHAUSER, L.**
Near misses - A critical discussion on an important topic
A72-22972
- ABRALOV, M. A.**
Microplasma welding of Kh18N10T steel casings
A72-22548
- ADAMS, R.**
Wind-tunnel simulation of store jettison with the aid of magnetic artificial gravity
[NASA-CR-1955]
N72-19000
- ADE, P. A. R.**
High resolution observations of the submillimetre stratospheric emission spectrum.
A72-25023
- AHMAD, I.**
Metal matrix composites for high temperature application
[AD-734304]
N72-19647
- AIBA, T.**
Investigation of air stream from combustor liner air entry holes. 2 Experiments with paired air entry holes and a numerical analysis
[NAL-TR-227]
N72-18279
- AIRD, R. J.**
The optimisation of undercarriage suspension characteristics by a deterministic method
A72-23458
- ALEXANDER, D.**
Data acquisition system for operational earth observation missions
[NASA-TN-X-62107]
N72-18199
- ALLEN, T. H.**
Aeromedical reviews Grades of decompression sickness in unpressurized aircraft
[AD-731118]
N72-19106
- ALPERIN, M.**
High L/D supersonic lifting systems
[AD-731566]
N72-17998
- ANDERSON, G. M.**
A near optimal closed-loop control law for a class of aircraft/aircraft pursuit-evasion differential

- games.
A72-23805
- ANDRES, R. D.**
Automation in aeronautics from the point of view of the pilot
A72-22780
- ANDREWS, E. J.**
The effect of lift system airflow on the hull aerodynamics of hovercraft
[CRANFIELD-AERO-7]
N72-17992
- ANDREWS, W. H.**
Exploratory flight investigation of aircraft response to the wing vortex wake generated by jet transport aircraft
[NASA-TN-D-6655]
N72-18003
- ANTHONY, P. M.**
Design and evaluation of active cooling systems for Mach 6 cruise vehicle wings
[NASA-CR-1916]
N72-18010
- Design of a convective cooling system for a Mach 6 hypersonic transport airframe
[NASA-CR-1918]
N72-18011
- ANTONIUK, R. A.**
Semi-bounded laminar jet of an incompressible fluid on a moving plate
A72-25136
- ARDEMA, M. D.**
Structural weight analysis of hypersonic aircraft
[NASA-TN-D-6692]
N72-18911
- ARNETT, S. E.**
Electronic engine control utilizing compressor exit conditions for acceleration control
[AD-734542]
N72-19857
- ARNO, R. D.**
Data acquisition system for operational earth observation missions
[NASA-TN-X-62107]
N72-18199
- ARNOLD, R. K.**
Employment of air operations in the fire services. Proceeding of a symposium
[AD-734078]
N72-19986
- ARNOLDI, R. A.**
Study of aerodynamic noise in low supersonic operation of an axial flow compressor
[NASA-CR-125811]
N72-19849
- ASTLEFORD, W. J.**
A facility and instrumentation for studying engine control and performance
[AD-73353]
N72-18469
- AZAD, R. S.**
Turbulence characteristics in a straight conical diffuser.
A72-23862

B

- BABIEJCZUK, J.**
Aviation in the land of Soviets
[AD-734069]
N72-19044
- BABINEAU, E. A.**
Models of information exchange and data rates for a post-1975 automated tactical air control system deployment
[AD-733584]
N72-18665
- BAERD, B.**
Study and calibration of pressure sensors in particular environments
[ONERA, TP NO. 982]
A72-22815
- BAGOT, R.**
Velocity distribution at a supersonic compressor inlet
[ONERA, TP NO. 975]
A72-22812
- BAILEY, J. E.**
Ceramic fibres for the reinforcement of gas turbine blades.

- BALACHANDRAN, V. A72-22396
Reliability design for an airborne ecological system.
- BALAZARD, J. A72-23999
Sonic boom exposure effects. I.3 - General considerations on sonic boom research.
- BALL, C. L. A72-23317
Performance of 1380-foot-per-second tip-speed axial-flow compressor rotor with blade tip solidity of 1.1 [NASA-TN-X-2449] N72-18998
- BARKER, H. A. A72-22396
Ceramic fibres for the reinforcement of gas turbine blades.
- BARKER, L. K. A72-22396
Effect of limited amplitude and rate of flap motion on vane-controlled gust alleviation system [NASA-TN-D-6733] N72-18995
- BARNES, J. A. A72-22396
Search and rescue crew compartment mock-up program [AD-733375] N72-18036
- BARNES, R. W. A72-22396
Complex annular ducts for use in gas turbine engines - Current problem areas in their design. A72-23872
- BARRANCO, J. M. A72-22396
Metal matrix composites for high temperature application [AD-734304] N72-19647
- BARRETT, M. F. A72-22396
IRF steep angle approach: Effects of wind, system data rate, and contingency event variables [AD-734702] N72-19051
- BARRETT, R. V. A72-22396
Research into slush drag, wheel spray and aquaplaning at Bristol University using small pneumatic tyres [ARC-R/M-3682] N72-19035
- BARSKILL, I. A. A72-22396
Characteristics of a two-spool gas-turbine engine in the case of engine speed reduction A72-23185
- BARTENS, R. A. A72-22396
Study/test program to evaluate the effects of high temperature hydraulic fluid on T-38 control surface servovalves [AD-734259] N72-19042

CONTRACT NUMBER INDEX

AERONAUTICAL ENGINEERING / A Special Bibliography (Suppl 19)

JUNE 1972

Typical Contract Number Index Listing

Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the IAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the IAA or STAR section.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA deposits its technical documents and bibliographic tools in eleven Federal Regional Technical Report Centers located in the organizations listed below. Each center is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA

University of California, Berkeley

COLORADO

University of Colorado, Boulder

DISTRICT OF COLUMBIA

Library of Congress

GEORGIA

Georgia Institute of Technology, Atlanta

ILLINOIS

The John Crerar Library, Chicago

MASSACHUSETTS

Massachusetts Institute of Technology, Cambridge

MISSOURI

Linda Hall Library, Kansas City

NEW YORK

Columbia University, New York

PENNSYLVANIA

Carnegie Library of Pittsburgh

TEXAS

Southern Methodist University, Dallas

WASHINGTON

University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA

Los Angeles Public Library

San Diego Public Library

COLORADO

Denver Public Library

CONNECTICUT

Hartford Public Library

DELAWARE

Wilmington Institute Free Library, Wilmington

MARYLAND

Enoch Pratt Free Library, Baltimore

MASSACHUSETTS

Boston Public Library

MICHIGAN

Detroit Public Library

MINNESOTA

Minneapolis Public Library

James Jerome Hill Reference Library, St. Paul

MISSOURI

Kansas City Public Library

St. Louis Public Library

NEW JERSEY

Trenton Public Library

NEW YORK

Brooklyn Public Library

Buffalo and Erie County Public Library

Rochester Public Library

New York Public Library

OHIO

Akron Public Library

Cincinnati Public Library

Cleveland Public Library

Dayton Public Library

Toledo Public Library

OKLAHOMA

Oklahoma County Libraries, Oklahoma City

TENNESSEE

Cossitt-Goodwin Libraries, Memphis

TEXAS

Dallas Public Library

Fort Worth Public Library

WASHINGTON

Seattle Public Library

WISCONSIN

Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 750 Third Avenue, New York, New York, 10017.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the National Lending Library for Science and Technology, Boston Spa, Yorkshire, England. By virtue of arrangements other than with NASA, the National Lending Library also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESRO/ELDO Space Documentation Service, European Space Research Organization, 114, av de Neuilly, 92-Neuilly-sur-Seine, France.

POSTMASTER: If Undeliverable (Section 1
Postal Manual) Do Not Return

"The aeronautical and space activities of the United States shall be conducted so as to contribute . . . to the expansion of human knowledge of phenomena in the atmosphere and space. The Administration shall provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof."

— NATIONAL AERONAUTICS AND SPACE ACT OF 1958

NASA SCIENTIFIC AND TECHNICAL PUBLICATIONS

TECHNICAL REPORTS: Scientific and technical information considered important, complete, and a lasting contribution to existing knowledge.

TECHNICAL NOTES: Information less broad in scope but nevertheless of importance as a contribution to existing knowledge.

TECHNICAL MEMORANDUMS: Information receiving limited distribution because of preliminary data, security classification, or other reasons.

CONTRACTOR REPORTS: Scientific and technical information generated under a NASA contract or grant and considered an important contribution to existing knowledge.

TECHNICAL TRANSLATIONS: Information published in a foreign language considered to merit NASA distribution in English.

SPECIAL PUBLICATIONS: Information derived from or of value to NASA activities. Publications include conference proceedings, monographs, data compilations, handbooks, sourcebooks, and special bibliographies.

TECHNOLOGY UTILIZATION PUBLICATIONS: Information on technology used by NASA that may be of particular interest in commercial and other non-aerospace applications. Publications include Tech Briefs, Technology Utilization Reports and Technology Surveys.

Details on the availability of these publications may be obtained from:

SCIENTIFIC AND TECHNICAL INFORMATION OFFICE

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
